I can't speak from personal experience because I don't own any of the dual-banders named in this discussion (I own an Icom W2A that I've been happy with), but I've heard from several reliable sources that the Icom W21AT has the best intermod/crossmod rejection of all the dual banders. And it has a backlit keypad. That's the dual bander I'd buy right now if my W2A self-destructed.

I note that this proposed law is not focused on scanners
in vehicles, but is, in fact, much broader in its impact.
The proposed law would effectively outlaw any handheld scanner
as well as all mobile scanners. That seems to be total overkill.

Question - Is the information about this bill sent to ARRL?
Is the knowledge of this proposed bill also posted to
rec.radio.scanners.

>What if the alternating current power is generated in your car?
>Assuming an AC-only receiver, would it be illegal to transport
>it in a vehicle along with a dc/ac inverter?

One could argue the intent was to absolutely preclude all
mobile or portable operation, it could also be argued that
the legislation has a loophole.

I lost the original post that included the bill's full text.
Could someone please repost it or email it directly to me?

Thanks,

NBS TIME AND FREQUENCY DISSEMINATION SERVICES

Time and Frequency Division
National Measurement Laboratory
National Bureau of Standards
Boulder, Colorado 80303

issued September 1979

FORWARD: This publication presents a description of the time and frequency dissemination services of the National Bureau of Standards. Those interested in information on the NBS atomic clock system, transmitting antennas, or discussion of technological applications of the dissemination services should refer to Section 9, OTHER PUBLICATIONS.

This SPECIAL PUBLICATION 432 will be revised and reissued only as necessary to update information.

INTRODUCTION

The time and frequency community is a small community, generally unknown to the world at large, yet vitally important to many of the basic activities of everyday living. Electric power companies, radio and television stations, telephone companies, and navigators of ships and planes all depend heavily on precise frequency and time information. They must have a constantly available source - a reliable, nationally and internationally recognized STANDARD - with which to compare and regulate their own timing equipment. For over 55 years, the National Bureau of Standards (NBS) has been providing this standard for most users in the United States.
Since the inception of the broadcast services from radio station WWV in 1923, NBS has continually improved and expanded its time and frequency dissemination services to meet the ever-growing needs of an ever-widening community of users. Today, still striving for better ways to serve its public, NBS is making major contributions to the nation's space and defense programs, to worldwide transportation and communications, and to a multitude of industrial operations, as well as providing convenient, highly accurate time service to many thousands of users throughout the world. Services are presently available from stations WWV and WWVB in Fort Collins, Colorado, and from WWVH in Kauai, Hawaii. In addition, services using network television and satellite signals are also available. This booklet is offered as a guide to these services.

1. WWV and WWVH

NBS broadcasts continuous signals from its high-frequency radio stations WWV and WWVH. The radio frequencies used are 2.5, 5, 10 and 15 MHz. WWV also broadcasts on an additional frequency of 20 MHz. All frequencies carry the same program, but because of changes in ionospheric conditions, which sometimes adversely affect the signal transmissions, most receivers are not able to pick the signal on all frequencies at all times in all locations. Except during times of severe magnetic disturbances, however - which make all radio transmissions almost impossible - listeners should be able to receive the signal on at least one of the broadcast frequencies. As a general rule, frequencies above 10 MHz provide the best daytime reception while the lower frequencies are best for nighttime reception.
Services provided by these stations include:

Time announcements, Standard time intervals, Standard frequencies, Geophysical alerts, Marine storm warnings, Omega Navigation System status reports, UT1 time corrections, BCD time code

Figure 1 gives the hourly broadcast schedules of these services along with station location, radiated power, and details of modulation.

Figure 1
*** This section has been SLIGHTLY modified to adopt it more sufficiently to a text file presentation.

The Hourly Broadcast Schedules of WWV and WWVH

W W V B R O A D C A S T F O R M A T

via telephone (303) 499-7111

Latitude: 40 degrees, 40 minutes, 49 seconds North
Longitude: 105 degrees, 02 minutes, 27 seconds West

NBS Radio Station WWV
2000 East County Rd 58
Fort Collins, CO 80524

Standard Broadcast Frequencies and Radiated Power:

2.5 MHz: 2500 Watts
5.0 MHz: 10000 Watts
10.0 MHz: 10000 Watts
15.0 MHz: 10000 Watts
20.0 MHz: 2500 Watts

* BCD TIME CODE on 100 Hz Subcarrier
* Beginning of each hour is identified by 0.8 sec long 1500Hz TONE
* Beginning of each min. is identified by 0.8 sec long 1000Hz TONE
* The 29th and 59th SECOND pulse of each minute is omitted

Hourly Schedule

Minutes after the top of the hour/Broadcast information

00 min Station Identification
02 min 440 Hz 1-HOUR mark
04 min reserved
08 min Storm information
09 min Storm information
10 min Storm information
16 min Omega reports
18 min Geo Alerts, Solar-terrestrial indices
30 min Station Identification

In addition, minutes 45-50 have no audio tones so that storm
forecasts from WWVH can be heard

W W V H B R O A D C A S T F O R M A T

via telephone (808) 335-4363

Latitude: 21 degrees, 59 minutes, 26 seconds North
Longitude: 159 degrees, 46 minutes, 00 seconds West

NBS Radio Station WWVH
PO Box 417
Kekaha, Kauai, HI 96752

Standard Broadcast Frequencies and Radiated Power:

2.5 MHz: 5000 Watts
5.0 MHz: 10000 Watts
10.0 MHz: 10000 Watts
15.0 Mhz: 10000 Watts

* BCD TIME CODE on 100 Hz Subcarrier
* Beginning of each hour is identified by 0.8 sec long 1500Hz TONE
* Beginning of each min. is identified by 0.8 sec long 1200Hz TONE
* The 29th and 59th SECOND pulse of each minute is omitted

Hourly Schedule

Minutes after the top of the hour/Broadcast information

01 min 400 Hz 1-HOUR mark
03 min reserved
29 min Station Identification
47 min Omega reports
48 min Storm information
49 min Storm information
50 min Storm information
59 min Station Identification

In addition, minutes 08-10 and minutes 15-19 have no audio tones so
that informational broadcasts out of WWV can be heard.

*** END figure 1 as edited for text file presentation ***

1a. Accuracy and Stability

The time and frequency broadcasts are controlled by the primary NBS Frequency Standard in Boulder, Colorado. The frequencies as transmitted are accurate to within one part in 100 billion at all times. Deviations are normally less than one part in 1,000 billion from day to day. However, changes in the propagation medium (causing Doppler effect, diurnal shifts, etc.) result in fluctuations in the carrier frequencies as received by the user that may be very much greater than the uncertainty described above.

1b. Antennas and Modulation

The broadcasts on 5, 10, and 15 MHz from WWVH are from phased vertical half-wave dipole arrays. They are designed and oriented to radiate a cardioid pattern directing maximum gain in a westerly direction. The 2.5 MHz antenna at WWVH and all antennas at WWV are half-wave dipoles that radiate omnidirectional patterns.

At both WWV and WWVH, double sideband amplitude modulation is employed with 50 percent modulation on the steady tones, 25 percent for the BCD time code, 100 percent for the seconds pulses, and 75 percent for voice.

1c. Time Announcements

Voice announcement are made from WWV and WWVH once every minute. To avoid confusion, a man's voice is used on WWV and a woman's voice on WWVH. The WWVH announcement occurs first - at 15 seconds before the minute - while the WWV announcement occurs at 7.5 seconds before the minute. Though the announcements occur at different times, the tone markers referred to are transmitted simultaneously from both stations. However, they may not be received at the same time due to propagation effects.
The time referred to in the announcements is "Coordinated Universal Time" (UTC). It is coordinated through international agreements by the International Time Bureau (BIH) so that time signals broadcast from the many stations such as WWV throughout the world will be in close agreement.
The specific hour and minute mentioned is actually the time at the time zone centered around Greenwich, England, and may be considered generally equivalent to the more well-known "Greenwich Mean Time" (GMT). UTC differs from your local time only by an integral number of hours. By knowing your local time zone and using the chart of world time zones in figure 3, the appropriate number of hours to add or subtract from UTC to obtain local time can be determined. The UTC time announcements are expressed in the 24-hour clock system -i.e., the hours are numbered beginning with 00 hours at midnight through 12 hours at noon to 23 hours, 59 minutes just before the next midnight.

1d. Standard Time Intervals

The most frequent sounds hears on WWV and WWVH are the pulses that mark the seconds of each minutes, except for the 29th and 59th seconds pulses which are omitted completely. The first pulse of every HOUR is an 800-millisecond pulse of 1500 Hz. The first pulse of every minute is an 800-millisecond pulse of 1000 Hz at WWV and 1200 Hz at WWVH. The remaining seconds pulses are brief audio bursts (5 millisecond pulses) that resemble the ticking of a clock. All pulses commence at the beginning of each second. They are given by means of a double-sideband amplitude modulation.
Each seconds pulse is preceded by 10 milliseconds of silence and followed by 25 milliseconds of silence to avoid interference which might make it difficult or impossible to pick out the seconds pulses.

1e. Standard Audio Frequencies

In alternate minutes during most of each hour, 500 or 600 Hz audio tones are broadcast. A 440 Hz tone, the musical note A above middle C, is broadcast once each hour. In addition to being a musical standard, the 440 Hz tone can be used to provide an hourly marker for chart recorders or other automated devices.

1f. Official Announcements

Forty-five-second announcement segments are available on a subscription basis to other Federal agencies to disseminate official and public service information. The accuracy and content of these announcement are the responsibility of the originating agency, not necessarily NBS.
Most segments except those reserved for NBS use and the semi-silent periods are available. Arrangements for use of segments may be made through the Time and Frequencies Services Group, 524.06, National Bureau of Standards, Boulder, CO 80303.

+ Omega Navigation System Status Reports

Omega Navigation System status reports are broadcast in voice from WWV at 16 minutes after the hour and from WWVH at 47 minutes after the hour. The international Omega Navigation System is a very low frequency (VLF) radio navigation aid operating in the 10 to 14 kHz frequency band. Eight stations are in operation around the world. Omega, like other radio navigation systems, is subject to signal degradation caused by ionospheric disturbances at high latitudes. The Omega announcements on WWV and WWVH are given to provide users with immediate notification of such events and other information on the status of the Omega system.
For more information about the Omega Navigation System, contact Mr. David Scull, United States Coast Guard HQ, (G-ONSOD 43), Washington, DC 20590.

+ Geophysical Alerts

Current geophysical alerts are broadcast in voice from WWV at
18 minutes after each hour. The messages are changed approximate
every six hours at 1800, 0000, 0600, and 1300 UTC. Part A of the
message gives the solar-terrestrial indices for the day; namely,
the 1700Z solar flux from Ottawa, Canada at 2800 MHz, the estimated
A value for Fredericksburg, Virginia, and the current, Boulder,
Colorado, K-index. Part B gives the solar-terrestrial conditions
for the previous 24 hours, and Part C gives the forecast for the
next 24 hours. If stratwarm conditions exist, a brief advice is
given at the end of the message.

1. Solar activity is classified as:

VERY LOW Usually only quiet regions on the solar disk and no
more than five of these; fewer than ten class-C
subflares without centimetric radio burst of SID
observed or expected.

LOW Usually more than five but less than ten quiet
regions on the solar disk; only class-C subflares
without centimetric radio bursts or SID (sudden
ionospheric disturbances) observed or expected.

MODERATE Eruptive regions on the solar disk; fewer than five
class-M X-ray events with centimetric radio bursts
and SID observed or expected.

HIGH Active regions on the solar disk; several class-M
X-ray events with centimetric radio bursts and
strong SID; and/or one to two importance=2
chromospheric flares or class-X X-ray events
observed or expected.

VERY HIGH Region capable of producing protons on the sun; one
or more chromospheric flares of importance-2 or
greater; with outstanding centimetric radio bursts
(500 flux units or greater), Class-X X-ray bursts,
and major SID observed or expected.

2. The geomagnetic field is classified as:

QUIET A <= 7, usually no K-indices > 2
UNSETTLED 7 < A < 15 usually no K-indices > 3
ACTIVE 15 <= A < 30 a few K-indices of 4

3. The geomagnetic storms are classified as:

MINOR 30 <= A < 50, K-indices mostly 4 and 5
MAJOR A > 50, some K-indices 6 or greater. Sudden
commencements indicated by beginning time to
nearest minute. Gradual commencement indicated by
beginning time to nearest hour.
4. The rest of the report as follows:

SOLAR FLARES

CLASS C any solar X-ray burst with a peak flux at 1-8 angstroms of less than 1 microwatt per square meter

CLASS M a solar X-ray burst with a peak flux at 1-8 angstroms, greater than or equal to 10 but less than 100 microwatts per square meter.

CLASS X a solar X-ray burst with a peak flux at 1-8 angstroms, greater than or equal to 100 microwatts per square meter.

MAJOR SOLAR
FLARE a flare of optical importance (at least 2B - BRIGHT) with a centimetric outburst of 500 flux units or more; or an X-ray event of Class-X intensity of duration 3 hours or more regardless of optical flare importance.

PROTON FLARE protons by satellite detectors (or polar cap absorption by riometer) have been observed in time associated with Ha flare.

SATELLITE LEVEL
PROTON EVENT a proton enhancement detected by Earth orbiting satellites with measured particle flux of at least 10 protons per square centimeter per second per steradian of at least 10 Million electronvolts.

POLAR CAP
ABSORPTION proton-induced absorption at least 2 dB as measured by a 30 MHz riometer located within the polar cap.

STRATWARM reports of stratospheric warmings in the high latitude regions of winter hemisphere of the earth associated with gross distortions of the normal circulation associated with the winter season

Inquiries regarding these messages should be address to NOAA, Space Environment Services Center R43, Boulder, CO 80303. These messages are also available by dialing (303) 499-8129

PROPAGATION FORECASTS

The radio propagation forecasts broadcast on WWV were discontinued on September 30, 1976. Some of the information previously contained in these forecasts is now included in the Geophysical Alert announcements at 18 minutes after each hour. However, neither NBS nor the Space Environment Services Center which sponsors the Geophysical Alerts make radio propagation predictions, nor do they maintain a literature file on the subject. Users interested in further reading material on the effect of solar and geophysical activity on radio propagation should consult the latest edition of the AMATEUR RADIO HANDBOOK, published by the American Radio Relay League.

MARINE STORM WARNINGS

Weather information about major storms in the Atlantic and eastern North Pacific are broadcast in voice from WWV at 8, 9, and 10 minutes after each hour. Similar storm warning covering the eastern and central North Pacific are given from WWVH at 48, 49, and 50 minutes after each hour. An additional segment (at 11 minutes after the hour on WWV and at 51 minutes on WWVH) may be used when there are unusually widespread storm conditions. The brief messages are designed to tell mariners of storm threats in their areas. If there are no warnings in the designated areas, the broadcasts will so indicate. The ocean areas involved are those for which the U.S. has warning responsibility under international agreement. The regular times of issue by the National Weather Service are 0500, 1100, 1700, and 2300 UTC for WWV and 0000, 0600, 1200, and 1800 UTC for WWVH. These broadcasts are updated effective with the next scheduled announcement following the time of issue.
Mariners might expect to receive a broadcast similar to the following:
"North Atlantic weather West of 35 West at 1700 UTC. Hurricane Donna, intensifying, 24 North, 60 West, moving Northwest, 20 knots, winds 75 knots; storm 65 North, 35 West, moving east, 10 knots; winds 50 knots, seas 15 feet."
Information regarding these announcements may be obtained from the Director, National Weather Service, Silver Spring, MD 20910.

1g. "Silent" Periods

These are periods with no tone modulation. However, the carrier frequency, seconds pulses, time announcements, and 100-Hz BCD time code continue.

END TRANSCRIPTION

I have ended the transcription from the original literature here. The remaining material is on WWVB, the 60 kHz sister station to WWV and WWVH, and other totally unrelated topics.

Here's a few more things you might like to know (TRIVIA):

The telephone numbers listed in Figure 1 dial-in directly to the broadcasts of WWV and WWVH. If you don't have a radio, this is the only way to get these broadcasts

The station identification and time-of-day announcement are pre-recorded -- not "live". The announcer for WWV is Don Elliott of Atlanta, Georgia. Mrs. Jane Barbe is the announcer for WWVH, and she is also from Atlanta.

TOURS:

Guided tours are available at all NBS radio station. However, arrangements for visiting the sites should be made in advance with

the EIC. There aren't any 'regular' visiting hours.

Tours of the NBS Boulder Labs, including visits to the atomic clock and the other dissemination services, are available. Information can be obtained from the Program Information Office, NBS, Boulder, CO 80303.

Correspondence pertaining directly to station operations may be address to:

Engineer-in-Charge
NBS Radio Stations WWV and WWVB
2000 East County Road 58
Fort Collins, CO 80524
(303) 484-2372

Engineer-in-Charge
NBS Radio Station WWVH
PO Box 417
Kekaha, Kauai, HI 96752
(808) 335-4361

If you wish to receive the document this material is copied from, so that you can read about the other frequency standard and about radio station WWVB at 60kHz, write to the station locations given in Figure 1 and ask for the document entitled "NBS TIME AND FREQUENCY DISSEMINATION SERVICES".

I have to seriously disagree with you Gil. I have been using PkGold for
a few years now. I just got my version 9 upgrade and the manual is
excellent. Not only does it give great detail about PkGold features,
but goes into details about the necessary TNC features for the specific
manufacturers (AEA, Kantronics). It also has very good and basic descriptions
of the various modes it supports. It is a handy size and easy to carry
around if you need to. If you really want to make a comparison, check it
out against the PcPakratt for Windows manual.

Yeah, you shell out a few bucks for PkGold but not much different that any
of the other first class packet/multi mode software packages. Unfortunatley
you cannot realize the full usefullness of this program without using it
for a few months. After that, you wonder how you will ever do without it.

I own registered versions of PkGOld and PkGold900 for different computers
using different TNCs. The context sensitive help and the command line help
(example: Enter a TNC parameter then hit F1) is by far the best in the
industry.

Just upgraded my firmware (version 7) and software (version 5.5a)
I have seen a much better intefaced. It even supports a mouse.
With the mouse I can click on any paramenter ie standby to listen.
I also have noticed no more serial line link disable.

925. The Confiscated HT Story (was Illinois anti scanner legisla)

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-20 16:18:01 UTC
From: William_A._Kirsanoff@smtpgty.anatcp.rockwell.COM
Message-ID: <9403207668.AA766855081@smtpgty.anatcp.rockwell.com>
Source record: 268036

Ed Bathgate [Ed@fore.com] writes:

I heard a story from a ham - who heard it from another...

2 men in park rock climbing - remote area of state (unknown which state)
1 fell and was badly injured, . . . [stuff deleted - the story is
posted below] . . .they confiscated his ht and charged him with several
criminal offenses and fined him heavily.

Now according to my understanding, in a matter of life or property
anybody is permitted to transmit on any frequency in any mode necessary
to communicate with emergency personel. This is an FCC issued federal
law.

Gary Morris KK6YB [garym@alsys.com] previously posted the following regarding
the ham who had his HT confiscated by the San Diego, CA Sheriff's office. I'm
sure this is the story your friend was referring to:

There have been two articles in the San Diego Union, they are on the
bulletin board at HRO. Here is a summary of the first one, I don't have
a copy of the second article.

The article states that everyone acknowledges that it was the ``act of a
good Samaritan.'' but that ``authorities confiscated Chris Boyer's
portable ham radio last month after he used it to obtain emergency
medical help for a seriously injured friend.'' It states that he ran
into trouble because he called for help on a Sheriff's Department
frequency that he isn't authorized to transmit on. They quote William
Grigsby, engineer in charge of the San Diego FCC office: ``"Under the
regulatory scheme, ... this kind of operation by persons who are not
authorized is strictly prohibited,'' he is also quoted to say that ``We
can't have a situation where everyone who wants to have a transmitter on
the police or sheriff's frequency can, if this continues, we're going to
have chaos for the law enforcement system.''

It states that Boyer tried to get help on five other repeaters but
couldn't get anyone, they also tried a cellular phone but couldn't
connect because they were ``in a ravine, toward the bottom of a
canyon''. He then rode up the trail a half mile and tried again from a
better spot but still couldn't get through, at that point they decided
to try the SO frequency. The article says `` "I look and this guy's
bleeding, he's taken a head trauma," Boyer said. "I came on, gave my
call sign - I wasn't trying to hide - and said, 'I'm a radio amateur
with emergency traffic.' The dispatcher said, 'Go ahead.'" ''

Two weeks later, he got a letter from Bill Kahn (communications
coordinator) for the SO, telling him to meet with Kahn and an FCC

person. He was given the choice of having to ``forfeit'' or be prosecuted by the federal government.

There are several quotes from different people including this one from county Supervisor Dianne Jacob, who represents that part of the county. ``"The frequencies are protected for public-safety emergencies," Jacob said. "Well, this individual had an emergency.''... ``"I think anyone in the same circumstances, including myself, would do the same thing."''

I understand there was a fuss of some kind between the Sheriff's office and the County Supervisors over this. I'm more concerned about the FCC Engineer who not only let this happen, but participated. Perhaps Gary or someone else from the San Diego area could post an update.

928. Kenwood TH-78A *OR* Yaesu FT-530

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-20 16:54:42 UTC
From: William_A._Kirsanoff@smtpgty.anatcp.rockwell.COM
Message-ID: <9403207668.AA766857282@smtpgty.anatcp.rockwell.com>
Source record: 268041

[steve@vigra.com] (Steve Haehnichen) writes:

[stuff deleted]

The Kenwood has a six-character alphanumeric display & memory, while
the Yaesu does not. Apparently, you can get an optional microphone
for the Yaesu that does have an alpha display, but I haven't seen it,
and I'm sure it's pricey.

I really appreciate the alphanumeric display. I travel quite a bit plus I
have a significant number of public safety frequencies programmed into my
TH-78A. The alphanumeric display makes keeping track of all the frequencies
a lot easier than actually trying to remember the frequencies themselves.
This is particularly valuable when I have the same frequency pair with
different pl's for different areas.

The Yaesu has "CTCSS" included while it's an extra option on the
Kenwood. I have no idea what that feature does, but radios that have
it seem to boast about it. The Yaesu also has some kind of Automatic
Tone Search feature that I don't yet understand.

CTCSS was standard on my 78A, I believe it still is. CTCSS will use pl on
your receive. That is, your squelch will not open unless the signal is
carrying the correct pl. I use this feature to combat the effects of
intermod (see below). Most 70cm and many 2m repeaters around here put a pl
on their output, as do all the public service repeaters. My "home" repeater
will after our next servicing (whenever we get it down from the roof, Alan
(private joke, sorry netters)).

Both radios can do VHF/VHF and UHF/UHF, but some people say that this
adds interference.

It most certainly does Ollie. I still think it is worth it. As I noted
above, I use the CTCSS feature to mitigate the intermod. Note that CTCSS
does delay the squelch opening about half a second, so those who quick-key
get the beginning of their sentences clipped. I also like the fact that all
memories are programmable for either band on the 78, and that each side of
the radio can operate in either band. In other words, I can run 440/144 or
144/144 or 440/440 at any time. This can be real handy.

The Yaesu has 82 memories, the Kenwood 50 (expandable to 250?).The
Yaesu has a light-up keypad, and I don't think the Kenwood does. The
Kenwood does, however, have some internal video games :-).

The 78A does indeed have a back-lit keypad and display. You can turn it on
and it will stay on as long as there is activity on the controls, then drop
out for battery savings, or you can turn it on and lock it on. As to the

memory - the memory expansion is about the only internal option that did not come with the radio. I think I paid about $25.00 for it, it's running somewhat higher now. Bear in mind that if you use the alphanumeric display, the available memory slots are cut in half, so you only get 125 slots. Still an awful lot of memory.

I've only been shopping for a few days, and I'm beginning to wonder why I don't see much of the Kenwood TH-78A mentioned in comparisons. The general list of recommended models seems to be: ICOM W21AT, Standard C558, Yaesu FT-530, Alinco DJ-580T with no mention of the Kenwood. Hmmm... Is there some glaring problem with this unit that takes it right out of the running from the start?

Would you compare your product to a superior one in your ad? :-) Actually, the 78A has been getting what I feel is bad press re: intermod. Yes, the radio is susceptible to intermod, as is any dual band wide receive HT on the market. My experience is that the 78A is somewhat worse than the FT-470 for intermod, and somewhat better than the FT-530. Your mileage may vary, taxes and dealer prep. not included. Since the 78A hit the market ahead of the 530, the 78A took the hit. Intermod was old news when the 530 came out.

I'm anxious to hear what other net.folks have to say about these two models.

And you now have my .02 worth.

>Dave K9ZCE

Hi Dave!

I've been using "cave radio" since 1969. Mine uses 3.5 kHz CW. Most others use VLF below 10 kHz. British and Canadian rigs use SSB between 100 and 200 kHz. VHF doesn't work well in caves; line of sight + 20 feet is about all you can get, with a lot of dead spots. UHF propagates further than VHF in cave passages. A friend put the UHF antenna of his crossband-repeating rig in a cave (with about 100' of coax) and was able to communicate with the outside world from several hundred feet away. VHF works reasonably well in open-air pits. Circular polarization would probably help in any case.

Cave radio's most useful aspect is its direction-finding ability. It can find the surface location above the transmitter, within a few inches, and

measure depth (+- 5%). Three entrances of the Mammoth Cave system in Kentucky were radiolocated.

I read an article in a British mining magazine about a repeater for mine-to= surface use; the underground part was a CB rig connected via a balun to a long piece of 300-ohm twin lead. It emitted and picked up RF by the " leaky feeder" effect. Special leaky coax is made for VHF/UHF systems installed in mines and subways (or use the crap that Radio S*** sells :-)

See _73_ magazine, February 1984, p. 42 for an article entitled "Cave Man Radio" (not the original title). There is a newsletter called _Speleonics_ which is about cave radio and other cave-related electronics. Several construction articles for cave radios have been published. E-mail for details. Don Lancaster mentioned it in his "Hardware Hacker" column and we received some letters from nuts who thought "underground radio" meant clandestine broadcasting. *(:-)

936. Unidentified Signals on 15 Meters

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-20 18:35:56 UTC
From: mraz@maverick.aud.alcatel.com
Message-ID: <9404201835.AA06756@maverick.aud.alcatel.com>
Source record: 268049

You can occasionally here some strange things on the ham bands but for the most part they can be dismissed as pirates, commercial intruders, harmonics, etc. Today at 1730 UTC (20 April) I heard the following. Can anyone identify what this is? Its source?

Freq. Repeated CW
21.189.9 E E
21.199.3 T E E
21.281.4 T T T
21.285.0 T T

These were all very weak. Seemed to peak NE/SW direction from Dallas. The signal characteristics lead me to believe that these are all from the same source. The signals continued the above modulation sequences for at least 15 minutes.

>Let's put my friend in the 1990s, not the 1960s.

You managed to hit one of my pet peeves squarely on the head.

If a diode detector and a keying transistor can do the job, why
replace them with a big complicated board full of "1990's technology?"
Now, maybe the simpler solution doesn't do an adequate job, but you
didn't say that. In and of itself, the age of the technology used
has nothing to do with whether it's a good choice or not.

As an engineer, I am as susceptible to the "gee whiz" factor as anyone
else. It's always more fun to work on the latest technology -- we
engineers have to work hard to resist the urge to overdesign products
when a simpler, cheaper, more reliable solution exists.

If there are good technical reasons for choosing one solution over
another then present them, but to argue against something solely on the
basis that it is old-fashioned is nothing more than technical hubris.

I recently acquired a "Heath Most Accurate Clock II" (I was surprised they were still in business) and I am having a problem with reception. The unit only receives WWV/H on 10 Mhz. Heath sells a dipole but I am not in a position to be able to install one. It is being used here at work to keep my LAN file server clock synchronized. Our building has an available mast mount available so I am looking for some kind of mast mounted gain antenna (directional if possible) for 10 Mhz. Does anyone know where such an antenna could be obtained? I have checked the various dealer magazines and the closest things I can find are tri-banders which cover the 30M band.

I have a TH-78A. I'd like to point out a couple of misconceptions
below:

In article <STEVE.94Apr19184558@hobbes.vigra.com> steve@vigra.com writes:
>The Yaesu has "CTCSS" included while it's an extra option on the
>Kenwood.

This is not true. The Kenwood has both PL encode and decode (the
decode is somewhat useful for screening out intermod.). The Kenwood
does not have PL scan. (BTW, PL and CTCSS are synonyms which
describe the use of a subaudible tone to break squelch on a receiver.
Many repeaters require a PL tone in order for them to key up.)

>The Yaesu has 82 memories, the Kenwood 50 (expandable to 250?). The
>Yaesu has a light-up keypad, and I don't think the Kenwood does.

The TH-78's keypad is lit. This is not true for the single band
TH-28 and TH-48. Note also that the memory capacity is cut in
half if you use the 6 character labels.

Despite some deficiencies, I have been happy with my 78. The 6
character display is a real winner for me. Maybe I just have a weak
mind, but I find it extremely useful to have 6 characters to remind
me what is in each of my 100+ programmed memories.

The deficiencies I have noticed are:
1: Intermod. I live in direct line of sight with, and about
two miles away from a mountaintop packed with commercial
transmitters (Mount Soledad for you locals). Let us say
that it is an RF rich environment. 2M repeaters without
PL are all but useless to me from home. Even the machines
with PL are difficult for me to copy sometimes. 440 is
OK, though.
2: User Interface. Let's just say arcane, complex, nonintuitive,
difficult. I don't know if this is any different than on
any other HT.

The workarounds for the above problems are trivial: I only use 440
at home. I have no intermod problems out in the woods mountain
biking. And I have a quick ref card which describes most of the
things I need to do.

Again I've been very happy with my TH-78A. If you don't care about
the alphanumeric display, the Yaesu is almost certainly as good or
better. If intermod bothers you very much, I have heard that Standard
radios are good in that regard.

Good luck with your choice!

>>device operates exclusively on alternating current power.
>
>What if the alternating current power is generated in your car?
>Assuming an AC-only receiver, would it be illegal to transport
>it in a vehicle along with a dc/ac inverter?
>
Most modern cars use an alternator to charge the battery and power most of the electrical equipment. Where in the new law does it say *where* the conversion from AC to DC has to take place? Even a mains battery charger uses AC power, which is converted to DC before being used. So, provide you use your scanner only with rechargeable batteries you can argue that you are using AC power :-)

Before acting on the above, note that I am *not* a US Lawyer.

I heard (on 10m last night) from my home in Ithaca, NY
the 10m Crawfish net coming out of La at 9pm/10pm EST.
I was pretty amazed. I tried to check in but couldn't make
it in with my antenna/power/location condition.
hopefully there still be some interesting action tonite.

From: larryj@teleport.com
Message-ID: <2p45sl$5om@elaine.teleport.com>
Source record: 268058

Having watched 10 FM over the last 25 years or so go from only one simplex channel on 29.600 to the relative mess that it has become now is unfortunate. Not only do we have people trying to run everyone off of 29.60 having a QSO (claiming that it's the "calling" channel) to dozens of repeaters all in carrier squelch on the four repeater channels. There just isn't room for any more repeaters on 10FM - the four channels we have already are unusable. I don't know what it sounds like from the East coast, but it is a mess from the west coast.

Some years ago, a group here in Oregon wanted to put up a 10 FM repeater in carrier squelch. It was necessary to give live demonstrations to the frequency coordinators as to why any coordinated repeaters had to have MANDATORY tone squelch in order to receive a coordination for the repeater sanction. Fortunately, S. California and some other areas have followed the same requirements. Now if only the rest of the repeaters would follow the same, we would be able to select just which repeater we wished to use, instead of bringing up 10-15 repeaters at a time howling against each other.

Anyone considering "putting up a 10M repeater to help DX stations around the country" - Please Don't - we have too many already. If you feel you MUST put up a 10M repeater, PLEASE use tone squelch. Maybe someday we can obtain more spectrum for repeaters and we won't have this problem.

C U on 10 FM,

Larry Johnson K7LJ

DXAC VOTE RESULTS

BY UNANIMOUS VOTE, THE ARRL DXAC (DX ADVISORY COMMITTEE) PASSED A RECOMMENDATION TO DELETE WALVIS BAY (ZS9) AND PENGUIN ISLANDS (ZS0,1). THE DXAC DECIDED THAT THESE ENTITIES NO LONGER MEET THE DXCC CRITERIA FOLLOWING THEIR TURNOVER TO NAMIBIA BY SOUTH AFRICA. THIS RECOMMENDATION HAS BEEN SENT TO THE AWARDS COMMITTEE ALONG WITH A SUGGESTED EFFECTIVE DATE OF MARCH 1, 1994.

IN ANOTHER BALLOT, THE DXAC VOTED DOWN A PROPOSAL TO ADD ADDITIONAL SINGLE BAND AWARDS TO THE DXCC PROGRAM. (THERE WERE 13 NO AND 2 YES VOTES WITH 1 ABSTAIN.)

THE COMMITTEE ALSO VOTED DOWN A PROPOSAL TO ADD A 10-METER DXCC HONOR ROLL BY A 15 TO 1 MARGIN. COMMITTEE MEMBERS EXPRESSED SUPPORT FOR THE MODE-SPECIFIC HONOR ROLLS THAT NOW EXIST (MIXED, PHONE, CW RTTY).

I don't have any idea why it is freezing up. I tried it, and it did the same for me. The only other thing that I can think of is going through the front door and giving the command to go into conference mode. I don't know how to do that on that particular system though. If it's that important try leaving a message to the operator to see what's wrong with it.

If the DoD is any judge then ELF radio with correspondingly low
bandwidth frequencies ought to be just the ticket.
(Submarines use them while submerged -- now that is testing attenuation!)

Trouble is unless you can trail a mile of antenna after you, you are going to
have a pretty inefficient antenna...

I was able to contact the ham that stayed home and determined that he has no better information than the public. The places mentioned were:

1700Z daily 14.300
unknown 14.340

These are both Maritime nets. It appears that these nets are the place to look. There are two callsigns to look for:

KB6YYL/MM2
W6PW/MM2

That's all I was able to find out. Happy hunting!

MID-ATLANTIC HAMFEST LISTING April 20, 1994

The following is a listing of known hamfests in the Mid-Atlantic area.
I will update this list as necessary. Please send any additions or
corrections to me at cps@access.digex.net so that others may benefit.

If you know of any hamfests not in this list, please let me know about
them so that they may be included in the next edition.

Hamfests that I know of, but need details: Gaithersburg, MD (Sept),
York, PA (Sept).

Thanks,

Chris Smolinski, N3JLY

As a teenager I did my bit on AM and FM using EL 6146s (if I remember correctly, or may be 4146s. It's been a loooong time). I would like to start once again; I have severed though my ties with radio almost completely. These days I just breath, eat, think Software Requirements :-)

Can someone point me to the right direction? FAQ, sources, ...
Since I am trying to finish my dissertation I won't be looking around for answers, so any e-mail that kind souls out there would send would be very much appreciated.

Thanks is advance

John Savvidis

You have hit one of my pet peeves squarely on the head. If I have
asked for information on speech recognition and I get 1) outdated
(thus ill-informed) opinions about speech technology, and 2) an
arm-chair quarterback recomendation to take another approach (clearly
not from someone who has worked with persons with handicaps), then
I feel no reply would have been better. (At this point I want to extend
thanks to all those out in net land who withheld uninformed or
irrelevent responses.)

Short answer. 1990s technology is far more sensitive to the person's
needs. First off, it makes him notice his handicap less if he can
speak to a computer than if he had to operate a suck/puff straw.
In fact, I doubt that he will operate CW if the adaptation is that

unnatural. Second, the nature of his handicap leads to rapid fatigue.
His voice is strong. I don't doubt that he could send CW other ways.
I am looking for the most natural way. Read that: Human factors
engineering.

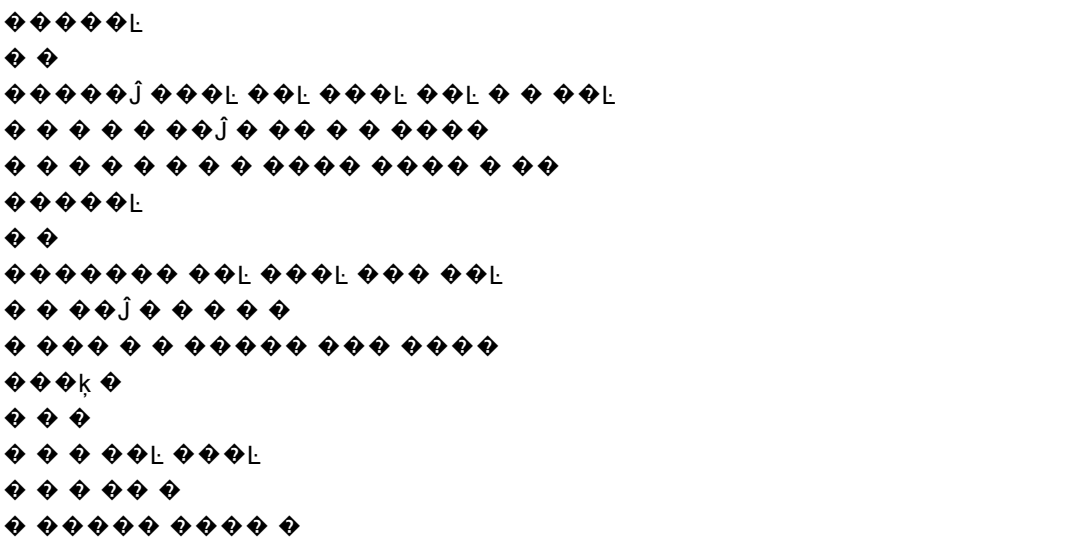
958. AR-Net - Amateur Radio Ne

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-21 03:35:00 UTC
From: john.woodstock@woodybbs.com
Message-ID: <93.2144.4524.0NFB268F@woodybbs.com>
Source record: 268071



AmateurRadio Net (ARnet) is a net dedicated to Amateur Radio enthusiasts. If you are an Amateur Radio enthusiast, or any of your callers are, this is an echomail network for you. ARnet is replacing an older ham radio network that recently folded - RF-Net(tm).

If you would like to get more information about this net, please look for the information packet ARNET044.ZIP in any of 3 places:

1) Channel1
SaltAir
Mustang HQ BBS
Execnet
The Silicon Garden

2) Any of the 40+ member systems

3) FREQ'd from 1:2619/211 using a magic name of ARNET

ARnet is available via QWK & FIDO. Some Hub slots are open, however many have been filled over the last 4-6 weeks.

If you have any questions, please contact me.

John Woodstock, N2HAA
The Silicon Garden
P.O. Box 436

Message-ID: <FAUNT.94Apr20204219@netcom2.netcom.com>
Source record: 268072

There was a message on packet that said they'd be on the air at noon on Monday, Wednesday and Friday, 7232,7240,14300,14342, and 21417. This information was apparently garnered by someone listening to the Baja Maritime Net. The calls to be used are KB6YYL/MM2 or W6PW/MM2, according to the same message. I'll call the office tomorrow and see if they have anything more solid.

NOTE: The Effective Sunspot Number for 19 APR 94 is not available.
The Full Kp Indices for 19 APR 94 are: 5- 3- 4- 4- 2+ 2o 3- 3-
The 3-Hr Ap Indices for 19 APR 94 are: 38 14 24 23 10 8 12 12
Greater than 2 MeV Electron Fluence for 20 APR is: 3.0E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. The largest flare of the
past 24 hours was a B6/SF at 20/1836Z in Region 7701 (N07W00).
This region has shown growth in white light. Region 7704
(N08E65) is still a small H-type group and has not flared since
yesterday.

Solar activity forecast: solar activity is expected to be
very low to low. A small C-class flare is possible in Region
7701 or Region 7704.

The geomagnetic field was quiet to active.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 21 apr-23 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 21 apr-23 apr

A. Middle Latitudes
Active 35/15/15
Minor Storm 15/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 30/15/15
Minor Storm 20/10/10
Major-Severe Storm 10/05/05

HF propagation conditions were near-normal over all
regions today. Transpolar and transauroral circuits
experienced occassional minor signal degradation during the
local night hours. No changes are expected for these regions
and near-normal propagation should persist over the next 48 to
72 hours.

19 Apr: 1622 1700 1716 C2.1 2N N08E85 III,V,Loop
1942 1948 2001 B2.2 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Hello there everyone, I have been seeing requests for information on communicating with the SS Jeremiah O'Brien the fully restored liberty ship travelling to the ceremonies at the Normady D-Day invasion beaches. Now there is a way to get a message to the ship.

All you have to do is call 1-800-876-RADIO and the communications center for the Jeremiah O'Brien will get the message to the ship.

regards

966. 10m FM Worldwide Repeater List

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-21 07:10:08 UTC
From: relsch@PROBLEM_WITH_INEWS_GATEWAY_FILE.bbn.hp.com
Message-ID: <2p58sg$1ve@hpbblb.bbn.hp.com>
Source record: 268079

Attached you find a complete list of all 10m FM repeaters worldwide.
If you have additions and changes, please write to the author of the
list via packet radio (address see below) or to me via email.

Have fun ! Rainer relsch@hpbbm.bbn.hp.com
dl5saf@db0sao.#bw.deu.eu

The 10 meter-repeaterlist consists of 3 info-parts plus 14 main parts. It contains news concerning the 10 meter-repeaterlist, month march 1994.
8 new 10m-repeater in Germany is planned: Backnang/Ludwigsburg (Locator: JN49SB), Braunschweig (Locator: JO52GG), Bremen (Locator: JO43JF), Kiel (Locator: JO54__), Pirmasens (Locator: JN39TE), Scharbeutz (Locator: JO54JA), Potsdam (near Berlin) (Locator: JO62NJ) and Reutlingen/Kusterdingen (Locator: JN48NM). In the next future, the 10m-repeater Regensburg, Konstanz and Traunstein will have a licence from the german BAPT. The 10m-repeater Hamburg DF0HHH works from 6:00 o'clock in the morning to 1:00 o'clock in the night (utc). It's a test from the new hamburg-repeater on 29.690 Mc. Tx-pwr is 50 watt on a 7/8-lambda groundplane-antenna. The future the repeater DF0MHR and DF0MOT will have a link via 70cm. 2 new 10m-repeater is planning in Andorra (C3) on a high mountain, and in Lebanon in the City of Beirut. The Sponsor is Walid OD5ZZ.
I wish you many fun on 10 meter-repeaters. This list includes the 10m repeater from usa (update from the pocket-book: The arrl repeater directory 1992-1993 twenty-first edition). In the future i have the new The arrl repeater directory 1994-1995. I have order this new pocket-book by the arrl.
Please send corrections, news and updates to: DL6XB @ DB0HB.#HH.DEU.EU
73 de Bernhard from Hamburg...

EXPLANATION FOR THE 10M-REPEATERLIST WORLDWIDE (de ARRL, WIA and DL6XB)

The following is an explanation of the information included in each repeater listing:

Location:
=========
The city/town where the repeater is located. A pound sign (#) indicates the repeater is uncoordinated by the coordination council.

Output:
=======
The Output frequenzy in megahertz

Input:
======
The Input frequenzy in megahertz

Call:
=====

The call sign of the repeater

Notes:
======
How the repeater may be accessed and other specialized features are indicated
by the following abbreviations:
ap.....Approval for the new 10m Repeater is finished
ap=BAPT.....The BAPT (The German Authority in charge) giving a
Callsign for the new 10m Repeater
ap=DARC.....Application for the 10m Repeater is proposed at DARC (Ger-
man Amateur Radio Club)
b.....Burst (Tonecall)
b=1750.....This repeater is on the air when the tonecall=1750 Hz has
been sent
bcn.....Beacon
c.....Closed, private system
(Ch).....Shortwave-Channel in DL
cs.....The Call of this repeater must be imparted
CTCSS=3Z or
CTCSS:123.0 Hz.....This repeater sends a sub-audible tone with 123.0 Hz
CTCSS=3Z^ or This repeater is on the air by PTT, when it has received a
123.0 Hz-CTCSS-Tone
INFO.....Please send more Infos of this repeater to:
DL6XB @ DB0HB.#HH.DEU.EU
li.....Licensed, but not on the air
LOC:.....Locator
o.....Open (usally carrier-operated)
op.....Operating (Carrying on)
pl.....Planning/development stage
QTH?.....Location not known...?
RB.....Remote Base
t.....(new abbreviation) - Tone-access (CTCSS TONE) required to
access.
tt.....Touch-Tone<TM> access to specialized repeater functions

Specialized features:
=====
a.....Autopatch
(ca).....Closed autopatch; may be used with authorization
e.....Emergency power
l.....Linked/Cross-band repeater
LINK0.....Link between RX and TX via phoneline
LINK1-23.....Link (In this Example: On 23cm-Band)
p.....Portable system
r.....RACES affiliated
RX=.....RX-QTH in .....
Speech:.....Speechannouncement: .....(Text).....
(temp off air).....Temp off air
x.....Wide area coverage
z.....Direct access to law enforcement (usally 911)
*.....This is currently understudy by ARRL

Sponsor:
========
The Sponsor of the repeater. A plus (+) sign indicates that the listed call
plus additional calls sponsor the repeater.

CTCSS (PL=Private Line) FREQUENCIES
==================================
The purpose of CTCSS (PL)<TM> is to reduce co-channel interference during band
openings. CTCSS (PL)<TM> equipped repeaters would respond only to signals ha-
ving the CTCSS tone required for that repeater. These repeaters would not res-
pond to weak distant signals on their inputs and correspondingly not transmit
and repeat to add to the congestion. The standard Electronic Industries Asso-
ciation (EIA) frequenzy cdes, in hertz, with their Motorola alphanumeric des-
signators, are as follows: (see the Call Area list!)
During 1980 the ARRL Board of Directors adopted the 10-meter CTCSS (PL)<TM>
tone-controlled squelch frequencies listed below for voluntary incorporation
into 10-meter repeater systems to provide a uniform national system.

Call Area Tone 1 Tone 2

W1 131.8 Hz-3B 91.5 Hz-ZZ
W2 136.5 Hz-4Z 94.8 Hz-ZA
W3 141.3 Hz-4A 97.4 Hz-ZB

Some more info, from packet.
At one point they were at 33.28N 118.W (sic), course 142 degrees, 65 revs, 11.9 knots. A later message indicates that they were into Mexican waters, making 11.5 knots at 68 revs. That's pretty good speed, at relatively low revs, as I understand it.

All of this is my interpretation of some rather unclear packet messages. I could be wrong.

I don't have a list of other gateways, but you should probably be able to find a list of them from an ftp site. Try ftp oak.oakland.edu. The only other one that I use is n8fow (Detroit). That's 44.102.48.2. Good luck.

steve@vigra.com (Steve Haehnichen) writes:

>I'm just now shopping for a 2m/440 HT and am trying to make the same
>decision. The local HRO has the Kenwood TH-78A for $389 and the Yaesu
>FT-530 for $399, so price doesn't seem to be a factor.

I used to live in SD and has been to that HRO many times, I was back
visiting and visited that store, oh, boy, they have more stuff now :).

>After mods, the Kenwood does these:
> Rx: 50-180 300-400 400-512 800-950
> Tx: 136-180 400-512

I seriously doubt if the Kenwood can lock the PLL (actually receiving)
below about 90 or 100MHz. And also transmitting the full 400-512MHz. The
display might say so, but the VFO and the rest might not.

>The Yaesu does these:
> Rx: 110-180 300-500 800-859
> Tx: 130-180 400-470

Only diff. is the Kenwood can do AM in all VHF and UHF (may be not 800 band)
but Yaesu can only do it in the 110 to 138MHz?? (Mine Standard C550/C558A
can do AM on all VHF but not UHF.)

>At first, I liked the idea of getting FM Broadcast Radio (88-108) on
>the Kenwood, but now I read that it's modulated differently
>(wide-band?) and doesn't come in anyway, so that's out.

Mine picked up quiet passages ok, once the loudness is out (high deviation)
then it's all clipped. Not useful at all.

>The Kenwood has a six-character alphanumeric display & memory, while
>the Yaesu does not. Apparently, you can get an optional microphone
>for the Yaesu that does have an alpha display, but I haven't seen it,
>and I'm sure it's pricey.

Kenwood can also send alphanumeric pagings to other Kenwoods, if that is
good for you. I really like the idea, but since most people don't like
Kenwood due to rumors of bad intermod rejection and hard to use interface,
they are not popular and thus the actual usage is not much besides few who
own it. Yaesu 530 doesn't have alpha numeric, the speaker/mic is a back-
lit display and buttons simpler than on the radio. about $100. The new
Ft-11 micro size single band HT has alpha numeric memory but no alphanumeric
paging. (also by Yaesu.)

>The Yaesu has "CTCSS" included while it's an extra option on the
>Kenwood. I have no idea what that feature does, but radios that have
>it seem to boast about it. The Yaesu also has some kind of Automatic
>Tone Search feature that I don't yet understand.

I think almost all HT sold in US includes CTCSS encode and decode while
most mobile/base only includes encode and decode is optional. CTCSS is
(depends on whom you asked :) Continuous Tone Coded Squelsh System, aka
sub-audio tone, also called PL (Private Line) by Motorola, or Select Call
by GE. It is from about 67Hz to about 250Hz selectable from a table to
key up repeaters to open squelsh on others' radios.

>Both radios can do VHF/VHF and UHF/UHF, but some people say that this
>adds interference.

Yes, as it is using the other band receiver to receive far away, thus
weakening the filter job/design. Currently there is no good cure except
they put in multiple switched filters.

>The Yaesu has 82 memories, the Kenwood 50 (expandable to 250?). The
>Yaesu has a light-up keypad, and I don't think the Kenwood does. The
>Kenwood does, however, have some internal video games :-).

One BIG reason I refused to buy the Kenwood as if I need a video game,
I can get something else, even to download one for my HP48SX prog. calculator.
If there are space left in the Kenwood uP rom, why don't they put in something
useful? like calculating/estimating remaining time battery usage, may be
even some memory management software.

>The general list of recommended models seems to be: ICOM W21AT,
>Standard C558, Yaesu FT-530, Alinco DJ-580T with no mention of the

They all have merits, but the only one I would buy (again) is either
the Standard (which I have a similar model) or Yaesu. But W21AT has
the cellular phone style microphone being lower in the battery area,
which is nice doing phonepatch. Alinco's only merit is lower price.
Kenwood if you want the latest alphanumeric functionality (which I really
like to have, but not at a sacrifice of other areas.)

>only let this happen, but participated. Perhaps Gary or someone else from the
>San Diego area could post an update.

I used to live in San Diego before, so I am especially interested in this story. Just like the LA Mayor could not fire Chief Gates of LAPD, I think the SD SO chief is also not "afraid" of the CS (Dianne) of SDC. (that's just my guess responding to your comment of "fuss.." I think they thought they have to enforce "something" in order to prevent people from using their frequencies again, preventing abuse, even at all cost, protect their frequencies.... Only that is an administrative frequency, not a dispatch one, and is reserve for emergency etc. I wish Chris could get his HT back, but I think once he handed it over, it'd be very hard unless he has a powerful lawyer and friends around :). I remembered some years ago when I was still living in SD, TV news were showing reports of civil rights violations in the County Sheriff's jails (beating of cellmates, either convicted or just in custody), and many many reports of similar cases. It seems that the upper levels allow this to happen, and since the Sheriff is voted in by local citizens, their structure is even more independent than city PD. There was also the case of a "rookie" Sheriff Deputy who gunned down a driver after pursuit of traffic violation or something like that, claiming that the driver was going after him in the parking lot. With many witness contrary to theirs, they closed up the area for investigation. One person died, and nothing happened, and not too long later, it's gone on the news and people forgot about it. With all these precedence, I am not sure if this action by the SO is purely accidental or merely not understanding "emergency traffic". I think they think they run the "law".

You think I must have a problem with them? Nope, I rarely have a run-in with the Sheriffs at all when I was there. (not my area I usually go, not cover by them.)

I wish Chris didn't hand in the HT and contest the Sheriff Office, and hopefully ARRL or some groups would support them. I am quite confident the Sheriff do NOT have a case at all :). (Thanks, at least the court system is still mostly independent, in most cases.)

For a good reading of the story, read the editorial on April issue of Popular Communications (or latest issue), it basically covered the whole story. but I'll give a bit here, where the juice is, so you don't have to

wait till getting the Pop. Com. :)

For those who don't know but the first half, where the emergency called was made. Here is the second half of the soap opera:
The civilian employee (not a sworn law enforcement officer) who contacted Chris to come in for the talk, and did the warning about prosecution etc, (name was in last article, but I forgot now.), was in hiking some weeks later, and got lost himself (got sick in Pop. Comm. article version), and he radioed the Sheriff Office which sent out a chopper (rather than land transport for the first case), to resure him, only turn out that he didn't need much medical assistance later, costing the county a few hundred bucks. He claimed authorized to use the radio, but in reality, he was not on duty, and thus has no authority (those who understand regulation more should correct here if it is not, I am only tell the story, not making it.) He was using similar channel/freq. as in first case. Of course it is ok, since he worked for the SO.

Somehow the news got out, and was published (following the interesting first) on local paper (and later whole story on some tabloid in a shorten version :), put up in HRO in SD.), can you imagine the howling and "arrrrrrr" the people put out? Thus, with so much fuss later, somehow one County Supervisor had the city/county granted Chris an award for "Good Samaritian". And now both the FCC local guy and the Sheriff Dept are low key and kept little comment on that. Was it a bought out? Was it used for political fight b/w the SO and CO? I don't know, but I think Chris should have his HT back, still.

FMUS1184@VEGA.SELU.EDU (ROBERT G. PRIEZ) writes:

>He didn't use a TYPE-ACCEPTED transmitter ! (Ham gear is not type-accepted
>for commercial band use)...

:) :), I hope you put some smiley in. First of all, it is Public
Service, not commercial. Second, he has no authority on it anyway,
regardless of the type of the radio.

However, does it make any difference when you have a life and death
situation, for emergency traffic? No.
Is it illegal by itself in US, to pocess a transmitter designed for
ham bands to have the convenient capability to transmit outside of
the ham band? No. (so I think so far, I don't know about in Canada)

So, what was your point? I think you were just being humorous.

This is a chronic problem with Kenwood CTCSS circuits in both their
handhelds and their mobiles. Other brands don't have this slow CTCSS
detect problem. The only people I ever hear complaining about missing
the beginnings of transmissions on my repeater, CTCSS in and out, are
Kenwood owners. I had one fellow tell me that the first letter of the
CW ID on the repeater was missing because his Kenwood never unsquelched
fast enough to let him hear it. The repeater's CTCSS circuit is very
fast, actually appears quicker than the carrier squelch, and the CTCSS
decoders in my Yaesu and Alinco radios never miss the first part of
anyone's transmissions. This is a Kenwood exclusive design defect.
(One of many IMHO.)

I wish you the best with it, but i contend that the VFO setup is pretty
weak in comparison with the 78, and IMD rejection no better. The PL scan
is nice, but only useful on very active machines that pass pl to the output.

Not bashing yer rig, my dad has one and likes it a bunch,

best of luck,

981. software for KAM

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-21 13:57:57 UTC
From: genem@cup.hp.com
Message-ID: <CoM44L.8LG@cup.hp.com>
Source record: 268093

Since there's lots of take here lately regarding Kantronics software for the MAC, and software for the PK-223, I'll start this one...

Does anyone know of any better PC software for the KAM? I have recently upgraded to the 7.0 version of the KAM and revision 3.2 of their HostMaster II+ software. I am getting more interested in it w/PACTOR and G-TOR, but don't really like their software package.

So I can have my log open as well, I'm running HostMaster under Windows (which it does just fine).

What I don't like about the package is you must always have an HF and VHF window displayed. You can cut these down to 2-lines but I think it's just implemented badly. Function keys are tripled-up with CTRL & ALT. Even though they tried to make it consistent, they're not easy to remember if you jump around modes. I think radio-buttons would do a much nicer job.

Anyway, a native windows application that would allow me to open a new window for each connection get my bucks. Anyone know of something? Or something in the works?

Thanks, and 73,
Gene

UNDERSTANDING THE DAILY SOLAR GEOPHYSICAL DATA BROADCAST

Revision 1.02

The Solar Terrestrial Dispatch (STD) has been providing a daily broadcast of solar and geophysical indices and other data over the electronic networks.

Computer software (in MSDOS format) to automatically extract the data in these daily reports, archive it, and/or graphically analyze it, is available through anonymous FTP or from our computer BBS system. For those with FTP capabilities, you may obtain this software under the filename "BCAST102.ZIP" from one of the following sites:

- nic.funet.fi, in the "pub/dx/software/msdos/solar" directory.
- wsmr-simtel20.army.mil, in the directory: "pd1:<msdos.database>"
- wuarchive.wustl.edu, in the directory: "mirrors/msdos/database"

The software may also be freely downloaded from our computer BBS system by dialing: (403) 756-3008. You will find BCAST102.ZIP in the Utilities file section of the BBS.

A sample broadcast message follows below. This sample broadcast data set will be fully described in this document.

!!END-DATA!!
```

LINE 01

```
!!BEGIN!! (1.0) S.T.D. Solar Geophysical Data Broadcast for DAY 248, 09/05/91
```

!!BEGIN!! : Signifies the start of the report, for computer-controlled extraction of the data.

(1.0) : Represents the version number of the data set. The appropriate software with the same version number must be used to extract and interpret the data sets.

DAY 248 : The day of the year for the report.

09/05/91 : Equivalent Month/Day/Year of the report.

LINE 02

```
10.7 FLUX=164.5 90-AVG=206 SSN=204 BKI=5454 3323 BAI=025
```

10.7 FLUX=164.5 : The 10.7 cm solar radio flux as reported by the NRC-Dominion Radio Astrophysical Observatory (DRAO) in Penticton, British Columbia, Canada (formerly produced by the Algonquin Radio Observatory in Ottawa).

90-AVG=206 : This value represents the 90-day average 10.7 cm solar radio flux.

SSN=204 : This value is the observed sunspot number as observed by Mt. Wilson Solar Observatory and reported by NOAA.

BKI=5454 3323 : These digits represent the 8 three-hourly Boulder K-indices as observed by the Boulder USGS magnetometer. The first digit represents the observed K-index for the period from 00:00 UT to 02:59 UT. The second digit represents the observed K-index from 03:00 to 05:59 UT, and so forth. If data is unavailable, it is replaced with an asterisk.

BAI=025 : This value is the observed 24:00 UT Boulder A-Index for
Boulder, Colorado.

LINE 03

BGND-XRAY=B8.6 FLU1=2.7E+05 FLU10=8.3E+03 PKI=5454 4333 PAI=029

BGND-XRAY=B8.6 : This is the background x-ray flux value as reported by the
Space Environment Laboratories. This value is produced by
observing the background x-ray emissions in the soft-xray
band (1 to 8 Angstroms). Consult the "Glossary of Solar
Terrestrial Terms" as produced by the STD for information
on understanding the x-ray classification scheme. This
document is available for anonymous FTP from the site:
"solar.stanford.edu" in "pub/USTR", or on "nic.funet.fi".

FLU1=2.7E+05 : This value is the observed proton fluence at greater than
1 MeV (million electron volts).

FLU10=8.3E+03 : This is the observed proton fluence at greater than 10 MeV.

PKI=5454 4333 : These digits represent the 8 three-hourly estimated
planetary K-index values for the UT day. The format is
the same as is used for the Boulder K-indices noted above.

PAI=029 : This value represents the estimated planetary A-index value
for the UT day. Occassionally, this value is not available
at the time the data set is compiled. If this is the case,
a preliminary calculation is made to estimate the planetary
A-index value using the planetary K-indices. Although this
will not produce an officially accurate result, the results
calculated in this way are usually accurate to +/- 2 points.

LINE 04

BOU-DEV=093,051,073,060,023,030,012,021 DEV-AVG=045 NT SWF=05:079

BOU-DEV=093,051,073,060,023,030,012,021
These values represent the observed maximum deviation in
the Boulder USGS magnetometer. The values are in nano-
tesla (nT, or reported as "NT" elsewhere in the report).
The first value represents the observed maximum deviation
of the geomagnetic field (using the most disturbed magnetic
component) during the period 00:00 UT to 02:59 UT. In this
example, the maximum deviation observed was 93 nT between
00:00 UT and 02:59 UT. The second value represents the
maximum deviation between 03:00 UT and 05:59 UT. Each of
these values correspond to the observed Boulder K-index
as reported on line 2 of this daily report.

DEV-AVG=045 NT : This value represents the average daily maximum deviation
of the Boulder magnetometer, given in units of nanotesla
(or NT). It is produced by simply averaging the 8

three-hourly maximum deviation values given on this line.

SWF=05:79 : The first value (05) represents the number of possible
episodes of Short Wave Fades (SWFs) observed during the
UT day. Short wave fading is simply a period of time when
the absorption of High Frequency (HF) radio waves increases
which produces a decrease in signal strengths of HF signals
OVER SUNLIT AREAS. In other words, this value represents
the approximate maximum number of times HF signals may have
faded out during the UT day. It is important to note that
SWFs are the strongest over the low and middle latitudes
and are ONLY observed during the daylight hours, preferably
when the sun is higher in the sky.

The second value (79) represents the estimated maximum
number of minutes that solar-flare activity may have
produced observed SWFs. In this example, solar activity
may have produced observed SWFs as many as five times
during the UT day. The estimated maximum number of
minutes that signals may have been degraded was 79.

Please note that these values are estimated maximums.
It is important to remember that most regions of the world
are in darkness for many hours each UT day. During periods
of darkness, SWFs will not be observed. Therefore, these
values are most useful as indicators of the possible
ionospheric disturbances which may have occurred during
the daytime hours. Days with 00 episodes of SWF activity
denote low levels of daytime sporadic HF signal absorption.

LINE 05

XRAY-MAX= M4.4 @ 0111UT XRAY-MIN= B8.0 @ 0914UT XRAY-AVG= C2.5

XRAY-MAX= M4.4 @ 0111UT
This value represents the maximum observed X-ray level
during the UT day, as well as the time of its occurrence.
In this example, x-rays during this UT day peaked at a
class M4.4 level at 01:11 UT.

XRAY-MIN= B8.0 @0914UT
This section of the report represents the minimum observed
x-ray level during the UT day. Same format as the maximum.

XRAY-AVG= C2.5 : This value represents the average x-ray flux observed
during the UT day. This value is determined by averaging
all of the 1-minute x-ray values during the UT day. This
average value might not always be determined by a full set
of one-minute daily values. If data from the GOES
spacecraft supplying this information is temporarily
halted, this value will be calculated from those daily
one-minute values which are received. It is therefore

possible, (although extremely unlikely) that this average value may be produced from only one or two one-minute flux measurements.

It is important to distinguish the difference between the background x-ray flux and the average x-ray flux. The average x-ray flux is the actual numerical average of all daily x-ray bursts (including all x-ray flares). The background x-ray flux is the lowest stable x-ray level observed during the day which is not associated with x-ray bursts. The x-ray average will therefore almost always be higher than the background x-ray flux. In this example, the average x-ray flux is a fair bit higher than the background level, possibly due to a number of x-ray bursts which occurred during the UT day.

LINE 06

NEUTN-MAX= +003% @ 2250UT NEUTN-MIN= -002% @ 1700UT NEUTN-AVG= +0.5%

NEUTN-MAX= +003% @ 2250UT
This is the maximum observed neutron monitor count as observed by the Thule neutron monitor. It indicates a maximum observed value of 3% which occurred at 22:50 UT. Significant maximums of greater than 10% may be related to Ground Level Events (GLEs) which are associated with near-relativistic particle bombardments from major solar flares. These neutron monitor values are determined by examining the 5-minute averages of the neutron monitor count rates.

NEUTN-MIN= -002% @ 1700 UT
This is the observed minimum neutron monitor count as measured by the Thule neutron monitor. Values below -5% may be related to Forbush decreases (FDs) which are most often associated with strong geomagnetic disturbances.

NEUTN-AVG= +0.5%: This value represents the average neutron monitor count as observed by the Thule neutron monitor. Average values below -5.0% are associated with Forbush decreases.

LINE 07

PCA-MAX= +0.7DB @ 1425UT PCA-MIN= -0.2DB @ 2325UT PCA-AVG= -0.1DB

PCA-MAX= +0.7DB @ 1425UT
This section shows the maximum Polar Cap Absorption (PCA) level observed during the UT day by the Thule T30A Riometer. Positive values indicate elevated levels of ionospheric absorption over the polar regions. As a result, positive values (particularly in excess of about 1.0 to 2.0 dB) are sufficient to cause notable attenuation

of HF signals over or near the polar regions. Values
larger than 3.0 to 4.0 dB may cause heavy to complete
absorption of HF radio signals over the polar and possibly
some high latitude signal paths. Riometer values less than
or equal to 0.0 dB are associated with negligable
absorption levels over the polar regions. Note that small
levels of absorption (of only a few tenths of a dB) may be
sufficient to cause errors in navigational signals such as
OMEGA navigational signals traversing the polar regions.

PCA-MIN= -0.2DB @ 2325UT
This is the minimum PCA level observed during the UT day.

PCA-AVG= -0.1DB : This is the average PCA level observed during the UT day
and is calculated by averaging the 5-minute averaged
riometer measurements during the UT day.

LINE 08

BOUTF-MAX=55331NT @ 2250UT BOUTF-MIN=55263NT @ 1649UT BOUTF-AVG=55301NT

BOUTF-MAX=55331NT @ 2250UT
This is the maximum observed value of the Total magnetic
Field (TF). The total field value is calculated by using
all three orthogonal components of the geomagnetic field.
These values are valid for Boulder, Colorado. The field
values are in units of nanotesla (NT). The time of the
maximum is also indicated.

BOUTF-MIN=55263NT @ 1649UT
This is the minimum observed value of the total field at
Boulder, Colorado.

BOUTF-AVG=55301NT
This is the daily average of the total magnetic field
strength as observed at Boulder for the UT day.

LINES 09 & 10

GOES7-MAX=E:+113NT@ 0607UT GOES7-MIN=N:-052NT@ 0911UT G7-AVG=+067,+063,+002
GOES6-MAX=P:+101NT@ 1925UT GOES6-MIN=N:-010NT@ 1439UT G6-AVG=+073,+026,+014

These two lines report the maximum, minimum and observed
average values of the geomagnetic field at geosynchronous
altitudes as observed by the GOES-6 and GOES-7 spacecraft.
GOES-7 is the primary spacecraft and is therefore reported
first.

The first capital letter following the "GOES7-MAX="
statement indicates which component of the magnetic field
experienced the maximum value observed during the UT day.
There are three possible letters which may be used here,

representing one of the three possible magnetic components:
P = The component parallel to the Earths rotation
axis. Positive values are northward. Negative
values are southward.
E = This is the Earthward component. Positive
values represent a downwardly directed field
(ex. toward the Earth or Earthward).
N = This component is perpendicular to the other
two. Positive values represent a westwardly
directed field. Negative values are eastward.
The figure following the "P:", "E:", or "N:" is the
observed magnitude of that component, followed by the time
that the value was observed. In this example, the GOES-7
spacecraft Earthward magnetic component was the observed
maximum component during the UT day. The magnitude of this
maximum Earthward component was +113 nanoteslas. This
represents a downwardly directed magnetic field with a
strength of 113 nT. GOES-7 observed this max at 06:07 UT.

This same format is followed for the minimum values
observed on GOES-7 as well as for the values on GOES-6.

G7-AVG=+067,+063,+002
This line reports the average geomagnetic field strengths
for the three magnetic components of the GOES-7 spacecraft.
The first value will ALWAYS represent the Parallel magnetic
component. The second value will ALWAYS represent the
Earthward magnetic component. And the last value will
ALWAYS represent the Perpendicular component. So in this
example, the average daily magnetic field strength for the
parallel component was +67 nT. The Earthward component had
an average field strength value of +63 nT while the
perpendicular component had an average value of +2 nT.

This same format is followed for the average values of the
GOES-6 secondary spacecraft.

FLUXFCST=STD:160,157,155 ; SESC:160,155,150 BAI/PAI-FCST=15,10,10 / 15,15,18

FLUXFCST=STD:160,157,155 ; SESC:160,155,150
The first three values represent the 72-hour forecast
10.7 cm solar radio flux values as produced by the Solar
Terrestrial Dispatch (STD). The second group of three
values are the 72-hour 10.7 cm solar radio flux forecast
values as issued by the Space Environment Services Center.
If either of these two forecasts are unavailable, "N/A"
will be used in place of the digits.

BAI/PAI-FCST=15,10,10 / 15,15,18
The first group of three values represent the 72-hour forecast Boulder A-Index (BAI) values as issued by the Space Environment Services Center. The second group of three digits represent the 72-hour forecast Planetary A-Index values (PAI) as issued by the United States Air Force (USAF) Global Weather Central.

LINE 12

KFCST=3344 5433 2334 4211 27DAY-AP=019,011 27DAY-KP=2333 4333 2233 2322

KFCST=3344 5433 2334 4211
These digits represent the 48-hour K-index fourcasts as released by the Space Environment Services Center. The first value represents the forecast K-index value for 00:00 to 02:59 UT. The second value represents the forecast K-index value from 03:00 UT to 05:59 UT, etc. The sixteen digits define the expected K-indices for the next 48 hours.

27DAY-AP=019,011: These values are the historical estimated planetary A-index values that were observed 27 days ago (approximately one solar rotation). The first value represents the observed estimated planetary A-index value 27 days ago. The second value represents the value observed 26 days ago. These two values may help serve as a guide to the possible intensity of recurrent geomagnetic phenomena.

27DAY-KP=2333 4333 2233 2322
These digits are the estimated planetary K-index values that were observed 27 days ago. The first group of eight digits (2333 4333) represent the three-hourly planetary K-indices that were observed 27 days ago. The second group of eight digits (2233 2322) represent the K-index values that were observed 26 days ago.

LINE 13, 14...

WARNINGS=*MAJFLR;*PROTON
ALERTS=**MAJFLR:X1.1/2B,N20E29(6857),0523-0555-0641,II=2@0551,IV=3@0602;
MINFLR:M4.4@0111;MINFLR:M2.3@0528;**MINFLR:M1.6@1209;
**TENFLR:2200,DUR:N/A

These lines summarize the Warnings and Alerts which are active at the end of the UT day. Each warning category is prepended with a SINGLE asterisk. Each alert category is prepended with DOUBLE asterisks. The end of each warning and alert is appended with a semicolon if more warnings follow. If no warnings follow, a carriage return concludes the category. Warnings and alerts may span several lines. These WARNINGS are valid:

*MAJFLR = Potential Major Flare Warning
*PROTON = Potential Satellite Proton Event Warning

*PROTFLR = Potential Proton Flare Warning
*GSTRM = Potential Geomagnetic Storm Warning
*MSTRM = Potential Minor Geomagnetic Storm
*JSTRM = Potential Major-Severe Geomagnetic Storm
*AURMIDWCH= Middle Latitude Auroral Activity WATCH
*AURMIDWRN= Middle Latitude Auroral Activity WARNING
*AURLOWWCH= Low Latitude Auroral Activity WATCH
*AURLOWWRN= Low Latitude Auroral Activity WARNING
*PCA = Potential Polar Cap Absorption Event Warning
*FORBUSH = Potential Forbush Decrease Warning
*SWF = Potential HF Radio Short Wave Fadeout Warning
*MAGPAUSE = Potential Geosynchronous Magnetopause Crossing Warning

The following ALERTS are valid:

**MAJFLR = Major Solar Flare Alert
**MINFLR = Minor Solar Flare Alert
**MINSTRM = Minor Geomagnetic Storm Alert
**MAJSTRM = Major Geomagnetic Storm Alert
**SVRSTRM = Severe Geomagnetic Storm Alert
**PCA = Polar Cap Absorption Event Alert
**PCAENH = Polar Cap Absorption Enhancement Alert
**PROTN10 = Satellite Proton Event Alert at > 10 MeV
**PROTN100= Satellite Proton Event Alert at > 100 MeV
**PROTNENH= Satellite Proton Enhancment Alert at > 10 MeV
**PROEN100= Satellite Proton Enhancement Alert at > 100 MeV
**MAGSI = Magnetic Sudden Impulse Alert
**245STRM = 245 MHz Radio Noise Storm Alert
**TENFLR = Tenflare Alert
**SWEEP = Sweep Frequency Event Alert
**FORBUSH = Forbush Decrease Event Alert
**GLE = Ground Level Event Alert
**MAGPAUSE= Geosynchronous Satellite Magnetopause Crossing Alert

Each of the alerts may be followed by a colon and very terse descriptive
text describing parameters of the event. For example, the alert section
within this example reads:

ALERTS=**MAJFLR:X1.1/2B,N20E29(6857),0523-0555-0641,II=2@0551,IV=3@0602;
MINFLR:M4.4@0111;MINFLR:M2.3@0528;**MINFLR:M1.6@1209;
**TENFLR:2200,DUR:N/A

This line consists of FIVE alerts (each set of double asterisks denotes the
start of a new alert): One major flare alert, three Minor Solar Flare alerts
and a Tenflare alert. In this example, the major flare was a class X1.1/2B
event located at N20E29 within Region 6857. It began at 05:23 UT, peaked at
05:55 UT and ended at 06:41 UT and was associated with a Type II sweep
(importance 2) at 05:51 UT and a Type IV sweep (importance 3) at 06:02 UT.
If a tenflare would have been associated with this event, it would have been
treated as a separate alert with a time corresponding to the time of the
major flare. In this ficticious example, no tenflare was observed.

The first minor solar flare was a class M4.4 which occurred at 01:11 UT. The second was a class M2.3 at 05:28 UT. The third was a class M1.6 at 12:09 UT and the Tenflare was observed at 22:00 UT. The DURation of the tenflare was unknown (not available) at the time the report was compiled.

Notice that the last alert is not followed by a semicolon. This marks the end of the alert section.

LAST LINE

!!END-DATA!! : The last line of the daily report will ALWAYS contain this final statement, which signifies the end of the data set.

FINAL NOTES

Additional warnings and alerts may be added to those mentioned here. The format of this data set may also change over time. Data may be added or deleted from the existing data set. However, for the most part, the structure will remain the same. Comments may be appended to the message following the dataset (ex. following the !!END-DATA!! marker), although this will not be a common practice. The length of the daily data set should be approximately 15-16 lines, but may vary slightly depending on the number of warnings and alerts that are active during each day.

This is the same data set that is sent to other organizations and institutions for research or professional purposes. Individuals or organizations with a need to directly receive this data through email should send requests for placement on the mailing list to: Oler@Hg.Uleth.CA, or to: COler@Solar.Stanford.Edu. Only those with a professional need, or those who receive the data too late to be of value, are encouraged to request direct access to the mailing list.

There may be infrequent days when no data sets are broadcast. This may be due to local computer problems, or perhaps possible problems with sites forwarding the data sets through the nets. In most circumstances, the data sets should arrive daily. They are usually released once a day, sometime after approximately 02:00 to 03:00 UT. This time lag into the new UT day is required so that all of the data associated with the previous UT day may be collected and processed for inclusion with the daily data set.

** End of Daily Solar Geophysical Broadcast Description **

Hello All,

I have an interest in amateur (Ham) radio. As such I have been using HyperTerm to create a HyperCard stack which will allow me to control a Shortwave transmitter via it's RS232 interface.

In order to turn off several of the transmitter's functions I need to be able to send the "NULL", character ($00) from HyperTerm to the transmitter. I cannot seem to be able to get HyperTerm to do this.

Anyone any ideas ?

Regards, Sean.

>can do AM on all VHF but not UHF.)

Not True. Although not documented, if you put a UHF frequency in
the left side of the FT-530, and enable A3E mode, you will decode
UHF frequencies in AM mode. Maybe not as convenient. Now, HOW they
do A3E detection is a kludge. Look at the schizmos and take a look :-)

992. Too much background noise!

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-21 17:45:23 UTC
From: chuckb@tc.fluke.COM
Message-ID: <CoMEns.Ar8@tc.fluke.COM>
Source record: 268104

I was listening to a couple of local big gun stations working a string of Russians on 20 meter phone last night, and I heard one of my pet peeves.

The local station was 40 dB over S9 while speaking, and was transmitting 20 dB over S9 amplifier fan noise between syllables. Why do operators allow so much background noise to drive their amplifiers to high levels of output WHEN THEY ARE NOT EVEN SPEAKING? I hear it all the time and it really is irritating.

When I use my amplifier, there is nothing being transmitted when I am not speaking. I checked this by turning my power meter to the 20W range and verified that no power was being transmitted when the rig is keyed but I am not speaking into the microphone.

Question: Do these guys just have their mic gain turned up too high? Or are they using crummy amplifiers?

: (thus ill-informed) opinions about speech technology,

Well, I'm not an expert on speech-recognition technology, but based on the reading I do in technical publications, I expect you will be disappointed if you depend on it as a way to send Morse code. While there has been remarkable progress in recent years in the field, I believe practical commercial applications are still limited to recognizing specific words or phrases. And even that requires training to a specific speaker's voice characteristics. The most advanced systems are pushing at the problem of general-purpose speech recognition, but the problem is not yet solved, at least using hardware that you could afford.

If there's more recent progress that I'm not aware of, I would be glad if someone could give me a reference.

By the way, if you ask for advice, please don't get mad if you don't get the answer you want. People tend to get gun-shy about posting when they get flamed for trying to help.

If we are to take you at your word, you are saying that between
syllables, the signal dropped 20 dB. This is a factor of 100,
and is nothing that you would worry about normally, surely?
Would you complain if a station that was S6 dropped to below
S3 between syllables?

If you listen to "local big guns", you must expect them to be
loud, and even 1% of their signal is still going to be loud.
If you get really close to a milliwatt transmitter it can blow
your ears out.

I have a FT-530 and have never had a problem with CTCSS not opening up fast enough. BUT know that you talk about Kenwood... I do use a Kenwood TK-340 commercial handheld at work and have noticed that I must deliberately hold the PTT down for a few extra seconds before I talk, otherwise no one will hear the beginning of my message. BTW it does use a PL of 100. Strange....I had never thought about this.

1001. FLASH! -- Illinois anti-scanner/transceiver bill derailed

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-21 20:19:22 UTC
From: parnass@cbnewse.cb.att.com
Message-ID: <CoMLsD.IrD@cbnewse.cb.att.com>
Source record: 268112
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.shortwave,rec.radio.amateur.misc

x
I just spoke with Rep. Tom Cross, my Illinois (Republi-
can) congressman who introduced IL House Bill 4180,
essentially outlawing portable and mobile scanners and
transceivers with extended frequency coverage.

He has shelved the bill temporarily and will reintro-
duce a much different version later. The new version
will make it a crime to *use* a radio receiver like a
scanner in the commission of a crime.

Cross said he was originally prompted by police groups
who are frustrated by gang members and criminals using
scanners. Now, that he has heard from several people
protesting 4180, he realizes the side effect of outlaw-
ing scanners and regrets that the original bill was
drafted so poorly.

Cross asked me how I heard about the bill and I told
him "a computer network at Bell Labs." I told him I
would let people know the results of our conversation.

Alan Bloom (N1AL, alanb@sr.hp.com) comments:

| ... I'm not an expert on speech-recognition technology, but based on
| the reading I do in technical publications ... practical commercial
| applications are still limited ... advanced systems are pushing at
| the problem ... but the problem is not yet solved, at least using
| hardware that you could afford

I work at a lab of about thirty people researching and developing speech recognition technology. Maybe I can shed some light on this issue.

Alan is correct in many ways, although I imagine many researchers in speech recognition would hasten to correct him.

I believe the key notion here is "affordable". You see, on the one hand, there do exist high-end systems that support large vocabularies (25,000 to 50,000 words), continuous speech (you don't have to pause between words), and speaker-independence (any person can talk to the system). On the other hand, these systems are very expensive for oridinary folks off the street, like you and me. We're hams, not Fortune 500 companies!

Systems that are affordable -- and we're still looking at $3,000 to $7,000 here for systems with reasonable performance -- are in fact limited in vocabulary size (3,000 to 5,000 words), require isolated words (you - speak - like - this), and are speaker-dependent (works very well for you after you train it for half an hour). Many people find this level of performance adequate. Some are very happy with it. Others find it lacking, or unacceptable.

So Al is right. We've still got a ways to go.

Good news is that as computers become more powerful and fall in cost, it becomes easier to run high-end speech recognition systems. This is because most high-end speech recognition systems require powerful workstations to run. A significant portion of cost nowadays is hardware. In a few years, most folks can have access to reasonable systems, without the need for specialized DSP boards. Your IBM PC with a SoundBlaster board will be perfectly sufficient. Most current speech recognition systems are being designed completely in software.

** disclaimer **
Please note my opinion is purely my own, and is not necessarily the view of my employer nor my colleagues. The abovementioned performance specifications are typical figures found across various systems, and are not necessarily representative of my employer's products. I have absolutely no intent to market my employer's products or services.

1003. Drake L-4B amp & control cable questions

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-21 21:08:51 UTC
From: slay@netcom.com
Message-ID: <slayCoMo2r.CH9@netcom.com>
Source record: 268114
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

I am looking for a control cable for use with the Drake L-4B linear amplifier; or ... info on where I may obtain the appropriate connector(s) for use with same. The L-4B appears to use a rather unique two-prong connector.

I acquired the amp a few months ago - but have kept it in storage. Apparently, it was not powered up for at least 3-4 years. Although it is cosmetically perfect .... I am somewhat concerned about the reliability of the filter capacitors.

Suggestions I have received include:

1) Run the filaments for at least 24 hrs to de-gas the 3-500Zs.
2) Bring up the HV slowly (over many, many hours) using a variac. Others say that this is NOT good for the 3-500Zs.
3) Bring up the HV quickly - and hold for 30 seconds. If the filter caps are gonna let loose - it'll happen then.
This comment came from a frequent author on amplifiers who has recently appeared in QST as well.

Any comments and/or suggestions would be appreciated on modifications and/or operation of the am; and concerning the control cable & connector.

Many thanks & 73 de Sandy WA6BXH

I read recently that the FCC ruled that it is now permissable to make personal calls via autopatch to conduct personal tasks such as making a doctors or dentists appointment. Can anyone out there answer the following:

1: Is this true? And if so
2: when did the ruling come down and
3: where can i get a copy of the ruling?

1005. Update: Illinois Antenna Law

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-21 21:46:25 UTC

Here is an update to the proposed House Bill 3730 that would make
the preemptions of PRB-1 part of Illinois Law:

House Bill 3730, making PRB-1 (which protects our right to have suitable
antennas) part of Illinois Law was OK'd by the Executive Committee. It will
now pass to the floor of the House for a vote.

It is URGENT that you and all your friends and relatives swamp your
State Representatives' offices with phone calls asking for a YES vote.
You must also do the same to Speaker of the House, Michael J. Madigan.
His phone is (217) 782-5350.

Let them know that you represent the wishes of 22,000 federally licensed
radio operators in Illinois.

*** END OF MSG # 56411 from KA9BBV @ WB9HMD.IL.USA.NA

Also, did anyone else notice that Washington apparently has done the
same thing? It's on page 20 of the current QST.

> ron thomas

Anywhere from a few minutes to hours and hours. As the skip shortens (down to 250-350 miles), check higher frequencies. Monitor TV channels 2-6 and broadcast FM. The MUF might suddenly shoot to 108 Mhz. Check 2 meters. Have fun!

BTW, sporadic Es peaks in June and July and the nature of the skip changes during late summer. But you might not notice that on 10. And during the peak of the activity (late June), multihop is possible on 10, say from the midwest and east coast to Europe, or west coast to Japan.

No valid reason, correct. But they have the *right*, we gave it to them. As
said earlier, until you get a judgement throwing it out you are on the hook.
Ignore it and they could issue a warrant. In other words, liable (guilty?)
till proven innocent in court of law. It might help if you brought your copy
of the FCC regulations Part 97 with you when you are talking to them.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 APRIL AND FORECAST UP TO 24 APRIL

No warning is current.

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 087/030

1B. SOLAR FORECAST
22 April 23 April 24 April
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 088/032

1C. SOLAR COMMENT
A new solar region is showing growth.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 20 April
Learmonth 10 3322 2232
Fredericksburg 08 08
Planetary 07 10

Observed Kp for 20 April: 3333 2212

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 Apr 10 Quiet to unsettled.
23 Apr 10 Quiet to unsettled.
24 Apr 10 Quiet to unsettled.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
21 Apr normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND

Vince F1RCS writes:
> Hello
> I was wondering if there were any means to forecast VHF or UHF propag.
> conditions. I understand much of it is rather umpredicable, but ...

Predicting VHF propagation is not easy but there are lots of tricks that help.

Best season for tropo conditions (>1000 km) seems to be late summer through early winter, at least in north Europe. I have worked distances around 1500 km or more in September, October, November and January. Weather maps and a barometer are good aids. Look especially for high pressures and the moment they start moving. Pressure around 1025 mbar or more is a good sign. Best QSOs usually take place when you are at the edge of the high pressure area. The lift often starts to develope after sun set.

E-skip (or Es) is hard to predict. The season starts in mid May and lasts till mid August. The best aid is to monitor frequencies above 25 MHz. Look for 10m and 6m ham bands, BC-bands (67-73, 87-108 MHz) and TV band I. If you have a scanner receiver, let it scan the empty BC-channels (87-108 MHz). When your scanner stops above 100 MHz, start calling CQ on 2m. E-skip can occur at any time (usually during day light) but check especially around local sun set.

Auroras can occur in any month. Subscribe Gary Oler's solar infos, if you can, and monitor HF-propagation. The upper HF-bands usually improve 1-2 days before aurora. You can also aim your antenna towards the sun and listen the solar noise. Increased solar noise is a sign of an upcomig aurora. And remember that auroras often reoccur after 27 days. Check the aurora beacons, like SK4MPI and DL0PR in north Europe. Some people have build their own magnetometers ...

Auroral-E is common on summer months. It can occur at any time of day but often starts around midnight. Monitoring TV and BC frequencies is useful. Check also for the meteor scatter expeditions stations cos they usually operate throughout the night and stay on one frequency, thus acting as good beacons. For this, you will have to be aware of what expeditions are on and the frequencies they use. VHF-net (14.345 Mhz) is a good source of information.

ARTB032 RESOLUTION GAINS MAJORITY

QST DE W1AW
ARRL BULLETIN 32 ARLB032
FROM ARRL HEADQUARTERS
NEWINGTON CT APRIL 12, 1994
TO ALL RADIO AMATEURS

ARLB032 RESOLUTION GAINS MAJORITY

THE AMATEUR RADIO SERVICE JOINT RESOLUTION, H. J. RES. 199,
NOW HAS A MAJORITY OF THE US HOUSE OF REPRESENTATIVES AS
COSPONSORS. ON APRIL 11, FOUR ADDITIONS TO THE LIST OF
COSPONSORS BROUGHT THE TOTAL TO 220, (OF WHICH THREE ARE NON
VOTING DELEGATES).

THE FOUR ARE: REP. JAMES TALENT (R-MO), DEL. ELEANOR HOLMES
NORTON (D-DC), REP. THOMAS RIDGE (R-PA), AND REP. DON YOUNG
(R-AK).

THE RESOLUTION SEEKS FORMAL RECOGNITION OF THE VALUE OF
AMATEUR RADIO TO THE COUNTRY, WOULD SUPPORT AMATEUR RADIO AS
''NATIONAL POLICY,'' AND WOULD ENCOURAGE RULES AND REGULATIONS
TO FACILITATE AMATEUR RADIO AS A PUBLIC BENEFIT BY ENCOURAGING
NEW TECHNOLOGIES.

INCLUDING RESOLUTION SPONSOR JIM COOPER (D-TN), THE TOTAL NUMBER OF VOTING SPONSORS IS 218. THERE ARE CURRENTLY 434 REPRESENTATIVES IN THE HOUSE.

MORE ON THE RESOLUTION AND THE LEAGUE'S EFFORTS IN WASHINGTON WERE IN APRIL QST, PAGES 47 TO 50.

(This sounds very interesting. Is it possible to have something similar happen here? The Amateur Service has just proved its worth with the drastic bushfires ... only the Amateurs held the communication systems together on the Central Coast in New South Wales, for instance. Previously Amateurs have helped with the big storms that went through central coastal districts in New South Wales. Maybe the WIA (Federal) could start working in this direction ???)

SP DX RTTY Contest April 23-24, 1994 part 2

Sponsored by: Polski Zwiazek Krotkofalowcow (PZK). Organised and run by Polish Radiovideography Club (PKRVG).

Multipliers: Count each DXCC country and each SP province on each band. (Band multipliers). Also, each continent (6) will count once, not once per band.

Note: CQ zones do not count as multipliers.

QSO points:

1. Count 2 (two) points for QSO with your own country.

2. Count 5 (five) points for QSO with countries on your continent.

3. Count 10 (ten) points for QSO with countries not on your continent.

Final score: Total QSO points x total multipliers x number of continents (max 6).

SWL rules apply as above.

Logs: Use separate log sheets for each band. Logs must show Band, Date and Time in UTC, Callsign, Message sent and received, country multiplier and points claimed. Entries with more than 100 QSOs must submit duplicate check sheets. Multiple operator stations should include names and callsigns of all operators.

Those submitting logs on disks: please send us your computer disk. IBM, MS-DOS compatible disks are encouraged. The format we prefer is your CT.BIN file, for example; SP2JPG.BIN, or your K1CC.DAT file, or your SP1LOP.DBF files. If you use a different program than mentioned above, the generic format we

want is a separate file for each band, containing vertical single column of calls in chronological order.

Disqualification: Violation of the rules of the contest or taking credit for incorrect QSOs or multipliers, or duplicate contacts in excess opf 3 per cent of the total made, will be deemed sufficient cause for disqualification. The decisions of the SP DX RTTY Contest Committee are final and not contestable.

Deadline: Logs must be received by 15 June 1994 to qualify. An extension may be granted if requested.

Mail logs to: CQ SP RVG Test

SP DX RTTY Contest Manager
Christopher Ulatowski, SP2UUU
P.O. Box 2530
81-963 GDYNIA 1
POLAND

Please assist this new Contest to get off the ground. (Ed).

Good Contesting.

IPS weekly report

8 April - 14 April 1994

Issue No 15
Date of issue: 15 April 1994

INDICES:
Date 08 09 10 11 12 13 14
10cm 073 073 075 074 074 074 079
A 29 39 31 29 23 24 (20 estimated)
T 36 18 09 02 12 20 22

SUMMARY OF ACTIVITY

Solar activity was very low throughout the period.

The geomagnetic field at Learmonth (WA) was active on 8th April, Active to minor storm on 9th, unsettled to active with occasional minor storm periods 10th-11th, unsettled to active 12th-13th, and mostly unsettled with brief active to minor storm periods on 14th.

Ionospheric F2 critical frequencies at Sydney on 8th were near predicted monthly values. Frequencies then became depressed at times by up to 30 per cent, otherwise near normal, until the end of the period. Spread F and strong sporadic E were observed at times on 11th-12th April.

FORECAST FOR THE NEXT WEEK (15 - 21 April)

SOLAR: Very low to low

GEOMAGNETIC: Unsettled, then coronal hole induced active to minor storm levels are expected to start on 17 April.

IONOSPHERIC 20 per cent depressions are expected on 18 April, otherwise near normal to 15 per cent depressed.

Courtesy of IPS Radio and Space Services

There are neither VK2SG RTTY DX notes or ARRLDX notes available this week due to poor propagation, we presume. Sorry about that, although I have had someone search on the Universities system in the Ham files and the notes are not there either ...

So this will be a short broadcast.

Coming events
1994
April 23rd-24th 1ST WW SPDX RTTY Contest

May 14th-15th Volta RTTY WW Contest

Paper for Teleprinters

Please, PLEASE, does anyone want some teleprinter paper, I have boxes of it. It is triplex paper (three sheets of paper, two sheets of carbon paper), you can have it for the cost of freight (you pay the freight). This paper will work in any pressure machine, or even typewriters, no good for tractor machines. When you unroll it you finish up with three rolls of paper and two rolls of carbon paper. The paper you can use, the carbon -- well you can give it to the children to mess up the house. Don't worry about the amount you want, I have enough.

Contact Syd VK2SG, phone 02-631 2576 or ok in the call book.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA @ VK2RWI or whatever substitute is being used at present.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA @ VK2RWI.

Email address for the Broadcast Officer is :

patl@conmusic.pitt.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast footprint. We know we reach ZL and sundry South Pacific islands. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the ANARTS BULLETIN 805 17/4/04/94.
Inserted by VK2BQS Jim, ANARTS Vice-President.

Well, that is a few years old. With the introduction and improvement of
the Hidden Markov Model (HMM) method of recognition, all three elements
of reconition have improved (vocabulary size, parsing continuous speech,
and speaker independence/noise immunity). Depending upon who's implementation
of HMM you choose, you can run 2000 word vocabulary continuous independent
speaker recognition on a PC, or much larger speaker-dependent vocabularies.
In this case speaker-dependent is prefered. Some of the speaker-dependent
systems (we are still talking PC, e.g. 486 with 8 Meg memory) begin with
a restricted vocabulary for a new user, then build a model of that user
automatically over time. This avoids specific training.

>If there's more recent progress that I'm not aware of, I would be glad
>if someone could give me a reference.

The best article I have seen is in the most recent issue of Computer Design.
At the end they list 8 or 9 companies that sell speech recognition products.
I have been calling and asking for literature the past few days, but
still hope someone out in computer land has prior experience.

>
>By the way, if you ask for advice, please don't get mad if you don't get

> Subject: Luck Hurder ... gone:(Why?

> Luck Hurder - KY1T, Deputy Manager for the ARRL's Field Services
> Department, was dismissed, this week, by the ARRL management over a
> newly enacted policy issue.

Perhaps we should read the "Subject:" line again and ask "why" instead of simply crying "wrong."

Typically when someone is "dismissed . . . over a newly enacted policy issue" it is because they refused to abide by the new policy. Why doesn't the writer of this message state what that policy is?

> In my view, the handling of this matter by the ARRL was unfortunate for
> all amateur radio operators.

"This matter"? What matter? What policy?

> that the ARRL understands our displeasure with their actions on this
> issue,

"This issue"? What issue? What matter? What policy?

> I personally have known and worked with Luck for many years

Perhaps this has something to do with it.

> If you believe that this action was not in the best interest of our
> hobby, then I encourage you to contact your respective Division
> Director, listed on Page 8 of QST or Dave Sumner-K1ZZ, ARRL Executive
> Vice President, 225 Main Street, Newington, CT 06111.

Luck Hurder could be a very helpful, hardworking guy. He also had an "attitude" a mile wide that could turn people off. I suggest we find out what the actual issues were before we all rush into the streets to storm the castle.

Dick

1016. is RS DSP available from Marymac's ?

Newsgroup: rec.radio.amateur.misc

Is there an FTP site(s) for Ham-related freeware/shareware for IBM-compatibles?

I just got my system, and need WAREZ!!!!!

Especially want: Morse instruction, packet radio, FCC rules.
*** PLEASE REPLY TO E-MAIL, MY HOST IS OFTEN TOO BUSY!!! ***

Greater than 2 MeV Electron Fluence for 21 APR is: 3.4E+08

SYNOPSIS OF ACTIVITY

Solar activity was low. C-class flares were observed in
Region 7704 (N09E55) at 21/1417Z (C1/SF) and new Region 7705
(N05E13) at 21/2037Z (C1/SF). Region 7705 is emerging rapidly
and has had frequent flare-bright fluctuations. Region 7704 is
still a small H-type group and has been relatively inactive.

Solar activity forecast: solar activity is expected to be
low. Additional C-class flares are possible in Regions 7704 and
7705.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 22 apr-24 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 22 apr-24 apr

A. Middle Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
No significant changes are expected over the next 72 hours.
Near-normal propagation should persist.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

I am wondering if I will be able to use 2 meter with only a novice permit? I want to go for tech, but just wondering if it is worth it.. Since I only plan on using 2meter... Also is there a quiz type program out there for a mac or IBM (or even unix, this way I can use it with out having to run dosemu :) Is there a internet site with alot of stuff on it that would have this sort of thing?

VK2SG RTTY DX Notes, 22 April
VK2SG RTTY DX Notes for week ending 22 April 1994 (BID RTDX0422)

Notes appear a little short this week, but with conditions as they
have been and actually are, reports have been few. There has been
very little activity, or maybe evryone was chasing on the bands to
find some signal around. There is good news for those looking for
9X5LJ. Jacques and his wife Monique are now in Belgium all safely.

Our thanks this week go to ZS5S, W2JGR, WB2CJL, VK2SG, ON6RO, I5ICY,
I5IGQ and IK5PWJ PacketCluster and the NJ0M node of the Twin Cities.

Notes of Interest:

DXAC VOTE RESULTS. The DXAC passed a reccomendation to delete Walvis Bay (ZS9) and Penguin Islands (ZS0,1). Both countries became deleted effective date of March 1, 1994.

RTTY (FS RTTY). We mourn the loss of Harvey McCoy, W2IYX who became a silent key on 17 April 1994. Harvey was the "father" of frequency shift RTTY (FS RTTY), having invented it for the U.S. military during World War II. All RTTYers owe him a debt of gratitude.

To those going to Dayton next week I wish a nice trip and lot of fun in the meeting and during the RTTY Dinner.

Also for next week send your Bandpass and Notes to Luciano, I5FLN @ I5FLN.ITA.EU or I5FLN @ ZS5S.ZAF.AF or I5FLN @ 4X6SL.ISR.AS.

>

I can relate to this after witnessing several serious traffic accidents
while traveling on IR70 between Dayton, OH and Washington DC. Either no
monitors repeaters or wants to help, except on a rare occassion. Out of
approximately 7 accidents reported, I made one contact via Ham radio for
help.

> Two weeks later, he got a letter from Bill Kahn (communications

What we have here is a classic example of the BS politics that dominates this
country today. That is, the "Monday Night Quarterbacks" calling the shots
after the incident to assign blame for the failure to secure their radio

networks. My opion is Boyer saw a situation requiring clear headed thinking weighed and executed his options in methodical manner to a successful conclusion. However, the petty local and federal bureaucrats proably with nothing better to do than screw with someone saw a golden oportunity to promote their careers by creating a mountain of paperwork that in the end will accomplish nothing more than to prosecute someone who tried to help another person in an emergency.

Maybe these bureaucratic idiots might feel a little differently if their lives were on the line next. Maybe the person who encounters them might say well...I cannot call for help because I will lose my license....so I guess I might as well walk 10 miles to my car drive to the nearest town and get help...hey bud I ll be back in about 4 hours or so.

This is a prime example of how America is burying itself in paperwork and civil litagation to the point society will cease to function from fear of prosecution.

73, Wes WB8CEH

Landline BBS Open to All: 916-262-1657
RACESBUL.323 RELEASE DATE: April 25 , 1994

Subject: OPS - How long and how soon?

Your questions are welcomed. Several have asked the
following in one way or another: "What I've heard from RACES
and the ARRL seems to assume that the RACES member should be
willing to report to a (hopefully) pre-assigned duty station and
remain there for several days in the event of a major disaster.
Is this the case?"

Comment: Previous bulletins have covered the aspects of
one's obligation to family first. Still, there are Strike Teams
that do make that commitment and dedication, as do key
participants of a well prepared communications reserve, like the
RACES, the OES Auxiliary Communications Service, or others.
Strike Teams and key responders are for a short quick response
to fill in until the slower mobilizing units can respond; then
they retire.

An extended response of several days is uncommon except in major
emergencies and then only by a few specialists. Sometimes at the
onset of a sudden emergency 12 hour shifts are utilized until
events settle down. Normally, except in the worst of situations,
regular participants are scheduled on and off 4, 6 or 8 hour
shifts, and expected to return home for rest when physically
possible. In some emergencies transportation disruption might
preclude a return home, in which case the responder might be
away for an extended period. For that reason dedicated
responders are prepared in advance for that eventuality.

An effective Radio Officer or Shift Supervisor will NOT allow
extended participation without adequate rest and relief unless
there is absolutely no alternative in the worst of disasters. To
do so is an open invitation to operator fatigue, loss of

concentration, along with stress and its ensuing problems in addition to concern about one's family and property.

The process of programming responder participation starts in the mind of the Radio Officer, Shift Supervisor or Staffing Coordinator. Even in emergencies extending for weeks, the effective supervisor schedules shifts to recognize and alleviate stress, fatigue and overly active ego or adrenaline drives.

1025. Re: HTX-202 Is this a good starter rig?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-22 13:38:11 UTC
From: dstock@hpqmoca.sqf.hp.com
Message-ID: <Conxvo.JGr@hpqmoea.sqf.hp.com>
Source record: 268134

Try a slightly different question:

Is a hand-held the best starter rig ?

The hand helds currently on sale are a very mixed bunch. The HTX202 is dedicated to amateur band only use, and cannot be modified for wide coverage without a total redesign. This gives it much better performance, in the amateur band, than its competitiors. The other radios are DESIGNED for wide band coverage, although this may be switched off by some software (or less common, now, hardware) switch. Even if the wide tuning range is NOT turned on, the compromised receiver design spoils its ability to function as an amateur radio.

If you want a radio that doubles as a scanner (less range than, and comparable performance to, a cheap scanner) almost all other hand helds could suit you, there are just trivial differences of control ergonomics.

As an alternative, consider buying something second-hand and cheap as a trial, to find out what interests you, and what you like/hate. If you intend working at home, consider an older mobile unit, power supply and a fixed antenna. When you decide to blow some real money on a new radio you will be able to use your own opinions, not someone else's. Second hand prices tend to flatten out, you should be able to sell your learner rig for very close (sometimes a little more!) than you paid for it.

Don't rush, play around a bit first. HAVE FUN !

I keep a couple of spare radios that I often lend to local beginners so that they can explore their own interests and preferences. Buying a new radio that you find you don't like can be a big waste of money. There is also the risk of buying a junker of a second hand radio, but beware that some new radios are shiny junk.

Hope this helps a little,

David GM4ZNX

A good source of parts for Drake equipment is (surprise) the R.L. Drake Co.
They're still in business, and they still have a lot of parts for older
equipment, and photocopies of manuals too.

>I acquired the amp a few months ago - but have kept it in storage.

>
> 1) Run the filaments for at least 24 hrs to de-gas the 3-500Zs.

This really is just to bake off the crud on the filaments. An hour is
plenty. The crud will clear anyway if you just transmit, but the amp
won't be as linear until it does. You can't really de-gas a used
tube because the getter is gone. Pull the tubes first and check filament
voltage and blower air flow before firing up the filaments for the first
time. There may be a problem, and you don't want to blow those expensive
tubes.

> 2) Bring up the HV slowly (over many, many hours) using a variac.
> Others say that this is NOT good for the 3-500Zs.

Of course you should *pull the tubes* before doing this. You want to
check that the blower is delivering the proper flow of air, and that
the other voltages are correct before lighting off the tubes. This slow
application of voltage will allow the filter capacitors to reform gently,
and it'll allow moisture to bake out of power supply components. It won't
take 24 hours to do this though, an hour is long enough, but you should
be present and constantly monitoring during the process. If you hear, see,
or smell something unusual, stop immediately and investigate.

> 3) Bring up the HV quickly - and hold for 30 seconds. If the
> filter caps are gonna let loose - it'll happen then.
> This comment came from a frequent author on amplifiers who has
> recently appeared in QST as well.

Well you *could* do it this way, if you don't mind replacing components, including possibly the expensive HV transformer, unnecessarily. *I* certainly wouldn't use this approach.

>this sort of thing?

Go for the Tech, Novice does *not* have 2 meter priviledges. There are
quiz programs floating around, but come on now, the tests aren't that
tough. Just go to Radio Shack and buy their study guide. An evening
familiarizing yourself with the regulations should be plenty to allow
you to pass the test. You only have to score 70%, and no one will ever
know whether you aced the test or just squeaked by unless you tell them.

1029. Re: Dangerous RF/Microwave fields

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-22 14:06:08 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1994Apr22.140608.23514@ke4zv.atl.ga.us>
Source record: 268138

In article <1994Apr19.174455.5715@verifone> steven_h2@verifone.com (STEVEN HIGA/HNL DQ) writes:
>Does anyone know what is considered dangerous RF and Microwave signals.
>Somehow I remember that between 100K and 30GHz your not suppose to expose
>human's to more than 194V/meter (the spec could have been either an ANSI,
>IEEE, or OSHA spec).

On a clear dry day, you have something on the order of 300 V/m from your head to your feet due to potentials in the atmosphere. The measurement used for RF safety is milliwatts per square centimeter.

>Anybody know if a spec exists detailing what RF and microwave field strengths
>and frequencies that are considered dangerous?

The ANSI spec is the guiding document in the US, but it's currently under revision. The old spec says you can't expose workers to more than 10 mW/cm^2. But that's not constant with frequency. In the mid-UHF frequencies, the requirement is 1 mW/cm^2 for continous exposure. Those numbers are expected to drop tenfold when the spec is revised. Brief exposure values can be higher than continous exposures, but the limit is where tissue heating becomes significant. You really have to consult the ANSI charts for detailed permissible exposure limits under different conditions and at different frequencies. It's not a linear function.

There are other studies ongoing about possible effects of very low level exposures, but the jury isn't in on whether there are measurable health effects or not at those levels. Some studies tenatively say yes there is a correlation, others say no.

1033. Help on Yagi antenna design

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-22 14:11:21 UTC
From: budhia@underdog.ee.wits.ac.za
Message-ID: <budhia.26.2DB7DB09@underdog.ee.wits.ac.za>
Source record: 268141

Could anyone please give me design specs for a Yagi antenna. The signal frequency I require is 600MHz.

thanks in advance.

HARSHIK

1036. How to autopatch?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-22 14:35:19 UTC
From: crispy@space.mit.edu
Message-ID: <2p8nb7$jrk@senator-bedfellow.MIT.EDU>
Source record: 268144

I just passed my technician exam and waiting for my license to show up in my mailbox. I was wondering how a autopatch connection can be made? (Of course, I know I cannot transmit until I receive my callsign)

Thanks,

Christopher S. Pak

ARLD023 DX NEWS

THE ITEMS IN THIS WEEK'S BULLETIN ARE COURTESY OF STEVE, W9NUF, THE NORTHERN ILLINOIS DX ASSOCIATION, SCOTT, N9JCL, THE YANKEE CLIPPER CONTEST CLUB PACKETCLUSTER NETWORK AND THE CONTEST CORRAL COLUMN FROM THE PAGES OF QST. THANKS.

SEYCHELLES. S79CK PLANS TO ACTIVATE COSMOLEDO ISLAND, IOTA AF26, FROM MAY 3 TO 6. QSL VIA S79CK. PLANS ARE TO THEN MOVE ON TO AMIRANTE ISLANDS, IOTA AF33, BEGINNING MAY 7.

PACIFIC ISLAND JAUNTS. RON, ZL1AMO, IS CURRENTLY QRV FROM TUVALU AS T28RW. HE PLANS TO BE ACTIVE FROM C21 AND POSSIBLY T30 IN THE NEAR FUTURE. LISTEN ON THE USUAL DX FREQUENCIES. QSL VIA ZL1AMO.

SRI LANKA. 4S7WP HAS BEEN ACTIVE AROUND 14020 KHZ BETWEEN 1600 AND 1700Z, 4S7AVR ON 14193 AT 1752, 4S7WN ON 14020 AT 1750, AND 4S7MZ ON 14195 AT 1745.

TAIWAN. BV7FC HAS BEEN A GOOD CATCH DURING THE PAST WEEK ON 40 METER CW. HE WAS WORKED ON 7004 KHZ AT 1100Z.

SAINT PAUL ISLAND. FIVE NORTHEAST WISCONSIN AMATEURS ARE PLANNING A 4 OR 5 DAY DXPEDITION TO CY9 BETWEEN JUNE 10 AND 19, WEATHER PERMITTING. CHECK 3525, 7025, 14025, 18075 AND 21025 KHZ FOR CW. FOR SSB, TRY 3795, 7155, 14195, 18130, 21295 AND 28350 KHZ. RTTY ACTIVITY WILL BE ON 7085 AND 14085 KHZ. QSL VIA K0XN.

GUANTANAMO BAY. THE GUANTANAMO AMATEUR RADIO CLUB, GARC, WILL BE ACTIVATING KG4CC FOR 24 HOURS FROM 0000Z ON APRIL 30. FOR CW TRY 3525 TO 3545, 7025 TO 7045, 14025 TO 14045, 21100 TO 21120 AND 28100 TO 28120 KHZ. WITH SSB TRY 3850 TO 3870, 7225 TO 7245, 14225 TO 14245, 21300 TO 21320 AND 28300 TO 28320 KHZ. A CERTIFICATE AND QSL WILL BE AVAILABLE. FOR MORE INFORMATION CONTACT GARC, PSC 1005, BOX 73, FPO AE 09593-0011.

OMAN. QSLS FOR THE A4?GW/0 DXPEDITION GO VIA OE6EEG.

IOTA BRIEFS.

CHILE. CE1LDS WILL ACTIVATE SANTA MARIA ISLAND OFF THE COAST OF CHILE STARTING APRIL 29. IT HAS BEEN MENTIONED THAT THIS WILL BE A NEW ISLAND FOR THE IOTA PROGRAM.

FRENCH GUIANA. FY9IS WILL BE QRV FROM SALUT ISLAND IN THE ATLANTIC COAST ISLANDS OF GUYANA MAY 13, 14 AND 15. THIS ISLAND IS IOTA SA20.

JAPAN. AN OPERATIOM FROM THE UJI ARCIPELAGO, IOTA AS67, BY JI6KVR IS EXPECTED TO START AROUND MAY 6. QSL VIA JI6KVR.

THIS WEEKEND ON THE RADIO. THE HELVETIA CONTEST, SPONSORED BY THE USKA OF SWITZERLAND IS FROM 1300Z APRIL 23 TO 1300Z APRIL 24, BOTH CW AND SSB. EXCHANGE SIGNAL REPORT AND THREE DIGIT SERIAL NUMBER. SWISS STATIONS WILL ALSO SEND A TWO LETTER CANTON DESIGNATOR. SEE PAGE 120 IN MARCH QST FOR MORE INFO.

THE SP DX RTTY CONTEST, SPONSORED BY POLSKI ZWIAZEK KROTKOFALOWCOW, RUNS FROM 1200Z APRIL 23 UNTIL 2400Z APRIL 24 ON 80, 40, 20, 15 AND 10 METERS. EXCHANGE RST AND CQ ZONE. SP STATIONS WILL SEND A TWO LETTER PROVINCE ABBREVIATION INSTEAD OF THEIR CQ ZONE. FOR FURTHER DETAILS CHECK PAGE 114 OF APRIL QST.

NEXT WEEK ON THE RADIO. REMEMBER THAT THE ARRL 220 MHZ VHF SPRINT IS ON APRIL 26 FROM 7 TO 11 PM YOUR LOCAL TIME. EXCHANGE GRID SQUARE LOCATIONS. SEE PAGE 120 IN MARCH QST AND PAGE 49 IN JANUARY 1983 QST FOR FURTHER INFORMATION ON THIS AND OTHER ARRL VHF SPRINTS.

QST DE W1AW
SPECIAL BULLETIN 16 ARLX016
FROM ARRL HEADQUARTERS
NEWINGTON CT APRIL 21, 1994
TO ALL RADIO AMATEURS

SB SPCL ARL ARLX016
ARLX016 FOUR JOIN HALLS OF FAME

FOUR JOIN HALLS OF FAME

CQ MAGAZINE WILL INDUCT FOUR AMATEURS INTO ITS HALLS OF FAME AT THE DAYTON HAMVENTION. JOINING THE CQ CONTEST HALL OF FAME WILL BE JOHN THOMPSON, W1BIH/PJ9JT ATILANO DE OMS, PY5EG AND THE LATE HERB BECKER, W6QD.

THE SINGLE ADDITION TO THE CQ DX HALL OF FAME WILL BE CHARLIE MELLEN, W1FH.

THOMPSON, 79 AND LICENSED SINCE 1930, IS WELL-KNOWN AS BOTH A DXER AND CONTESTER. FOR MORE THAN 20 YEARS HE HAS OPERATED FROM HIS WINTER HOME ON CURACAO IN THE NETHERLANDS ANTILLES.

DE OMS IS CREDITED WITH ENCOURAGING CONTEST OPERATIONS ALL OVER SOUTH AMERICA, IS AN ACTIVE CONTESTER, AND HAS ONE OF THE MOST POTENT STATIONS ON THE CONTINENT. HE ALSO IS AT THE TOP OF BOTH THE MIXED AND PHONE DXCC HONOR ROLLS.

HERB BECKER, W6QD, WAS ONE OF THE HANDFUL OF DX AND CONTEST OPERATORS WHO CONCEIVED, IN THE LATE 1940S, THE IDEA OF THE CQ WORLDWIDE DX CONTESTS. THE BASIC RULES HE HELPED WRITE MORE THAN 40 YEARS AGO HAVE REMAINED ESSENTIALLY UNCHANGED.

CHARLIE MELLEN, W1FH, JOINS THE CQ DX HALL OF FAME. A DXCC MEMBER BEFORE WORLD WAR 2, HE STARTED OVER IN 1945, CLIMBED TO THE TOP OF THE DXCC LADDER, AND STAYED THERE THROUGH MOST OF HIS CAREER.

> are they using crummy amplifiers?

It's called speech compression. When you run a speech compressor, the
background noise is boosted in an attempt to keep the average power high.

The real cure to this is to run less compression or quieter fans, but
then you wouldn't know they were "big guns" then....

>Does anyone know what is considered dangerous RF and Microwave signals.

The safe exposure limits put forth by the IEEE are frequency dependent. For example, the maximum permissible exposure limit at 2.0 GHz is 6.667 mW/cm^2 controlled exposure for 6 minutes.. At 15 GHZ, that limit for "safe" exposure is 10.0 mW/cm^2 controlled exposure for 6 minutes.

There are different permissible exposure limits given for "controlled" and "uncontrolled" exposure which have different averaging times. All this information can be found in IEEE C95.1-1991

From: mladejov@ced.utah.edu
Message-ID: <Coo4op.E5u@ced.utah.edu>
Source record: 268011

Just wondering, can a HTX-202 be used (with or without modification) on
Civil Air Patrol frequencies (143-144, 148-149.5)? Is there a CTCSS
tone encoder available?

There are a lot of non-ham CAP members who want a rugged, reliable,
simple-to-operate, and cheap VHF HT. The current crop of rice-boxes
have too many bells and whistles.

: Anywhere from a few minutes to hours and hours. As the skip shortens (down
: to 250-350 miles), check higher frequencies. Monitor TV channels 2-6 and
: broadcast FM. The MUF might suddenly shoot to 108 Mhz. Check 2 meters. Have
: fun!

Good advice. I live out in the country where there is no cable TV.
When I watch channels 2-6 and notice interference from other TV stations
I know 10 meters (and other bands) are usually open via E. Sometimes the
propagation gets so good that the Denver stations (70 miles away) get
totally wiped out by the other stations.

: BTW, sporadic Es peaks in June and July and the nature of the skip changes
: during late summer. But you might not notice that on 10. And during the
: peak of the activity (late June), multihop is possible on 10, say from the
: midwest and east coast to Europe, or west coast to Japan.
: Roger Brown

In the bottom of the 1970s sunspot cycle I worked all states on 10 meters.
With the exception of KH6 and a few southeast states, worked on F layer
skip, all were via E skip. During the summer months we can get a number
of double hop E openings from here in CO to W1 land (the usual single hop
opening here is to 5,6,7,8,9 and 0 land).

Also during that period I worked a few JAs at around midnight my local
on 10 meters. Thats over 5000 miles from here so not sure how many hops
were involved. Perhaps a combination of E and F2??

So if you like short skip enjoy the summer months on 10 meters and above
(sometimes 15 and 20 open also).

>:) :), I hope you put some smiley in. First of all, it is Public
>Service, not commercial. Second, he has no authority on it anyway,
>regardless of the type of the radio.

Hi David...actually I wasn't thinking in terms of humor; I was simply making an observation about the radio that was used in the incident. I guess the incident itself is both humorous and tragic .... in so many cases in US, the lawbreaker reaps benefits, while the honest citizens (& cops) are hassled.

I'm not certain, but I believe the FCC distinguishes ONLY TWO types of gear, commercial which must meet type-acceptance or type-approval, and other non-type accepted stuff like amateur. Equipment operated in the Public Safety bands must still meet the commercial type-acceptance. Maybe someone who is better informed can clarify this for us.

>Is it illegal by itself in US, to pocess a transmitter designed for

Source record: 268147

was by the nearby to work radio shack yesterday and they have a digital signal processor available for about $80 that's 'sposed to be good for noise reduction of audio communications systems (even has an SSB and CW switch position).

i wasn't ready to buy yesterday. the salesdroid only knew there was a similar device now built into one of their CB radios and didn't know much more about it and I didn't have a lot of time to get into it. it's small, it's light (expected parts count for active ICs is 5) and has a mode selector and gain control on the front panel.

anyone else have a chance to look at one yet?

You might be interested in this story. Last week I was testing a circuit
in our lab at lunch time when some of my fellow engineers walked in the
door, and came by to see what I was doing. The circuit is a T/R switcher
with a sidetone oscillator and some associated filtering. Anyway, I was
using a 555 as a "key simulator" so I could take some oscilloscope pictures.
They took one look at the breadboard and the 'scope and proceeded with the
following gems -

"Wow, op amps. Didn't think anyone used those anymore."

I guess old habits die hard.

"What's the transistor for? Do you know how to bias those?"

It's a switch. Hit it with a "high" (if all else fails, put it
in digital terms - they'll understand).

"Nice waveform. Couldn't you use a DSP chip to do that?"

No smartass answer for this one - I was too stunned.

Luckily, nobody noticed the 555. I probably would have been fired. 8^)

Ed Parish (parish@think.com) wrote:

: I need to adjust the deviation in my Standard 5608A. Does anyone have a
: service manual or know the location of the adjustment? Any information
: would be useful. Thanks

: Ed
: parish@think.com

Ed:

Deviation for VHF is adjusted with R635, which is located under the TOP
cover of the radio in between two shielded boxes (middle left) of the board.

Deviation for UHF is adjusted with R214, which is located under the BOTTOM
cover of the radio next to a small shielded box (middle left) of the board.

You may have to remove the top press on shield cover to gain access to the
VR's.

rec.radio.amateur.vhf.plus should it be created?

This is a informal request to see if there is enough interest to warrant a new news group. The driving factors in this interest are, the apparent demise of the vhf list run out of Stanford University and the lack of any other news group for this area. The major unknown is if there is enough interest to set up a formal RFD/CFV for this area.

While my primary interest is in the weak signal area, I have also noticed a general need in areas of ATV, Repeaters, FM, etc. So I envision the charter as being read very broadly, to include all areas of VHF/UHF/SHF interest, except RC, satellite, and packet (as they have their own forums)

Please reply to me via email or to rec.radio.amateur.misc (also posted to rec.radio.amateur.space and rec.radio.amateur.policy)

1054. Nicad Batteries -- The Official Word

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-22 19:24:53 UTC
From: alanb@sr.hp.com
Message-ID: <CooDxI.H1D@srgenprp.sr.hp.com>
Source record: 268153

I recently acquired an engineering handbook published by Sanyo, maker of "Cadnica" brand nickle-cadmium rechargable batteries. It lays to rest some myths dear to the hearts of radio amateurs. In the following, the quoted material is from Sanyo's book.

Note: "C" is the amp-hour capacity of the battery. For example, if you have a 5 A-hr battery, a charging rate of "0.1C" is 0.5A.

The memory effect:

"Nickle-cadmium batteries have a "memory effect" in which the voltage drops by 2 levels during discharge after shallow charge/discharge cycles. In application when discharge end voltage is highly established, apparent decreases in capacity and operating voltage are shown."

A graph shows a series of discharge curves (voltage versus time) for a battery under the following conditions: (1) Fresh battery, (2) First discharge after 100 cycles, (2) Second discharge after 100 cycles, (3) Third discharge after 100 cycles. The "cycles" consist of a 0.1 C charge for 10 hours followed by a 1C discharge for 10 minutes. The "discharge curve" is measured after a final 0.1C charge for 16 hours followed by a discharge rate of 1C.

The four curves are almost identical. As near as I can read the graph, The first discharge after 100 memory cycles drops to 1V after about 63 minutes, compared with about 66 minutes for the fresh battery. The second and third discharges show an even smaller difference.

Bottom line: Yes there is a memory effect, but it is very small and not worth worrying about.

Charging:

"As long as a Cadnica battery is charged at an input rate below the specified value [typically 0.1C] internal gas pressure remains at a low level. However, heat generated by gas recombination causes a rise in cell temperature. When overcharging is repeated often, heat deteriorates the cell and shortens its service life."

So don't overcharge excessively. It's OK to leave your battery on the charger overnight (depending on the charger design, up to 18 hours or so if the battery was well-discharged) but don't hook it up to the charger and go away for a week.

Discharging:

"The number of cycles Cadnica batteries can withstand depends on the depth of discharge... When the cell is discharged to a greater depth,

the number of cycles decreases."

Some folks have recommended that occasionally you intentionally completely discharge your nicads to eliminate the memory effect. The above implies that that's a bad idea.

Storage:

"Cadnica batteries can be stored at temperatures ranging from -30 degC to 50 degC without essential deterioration in performance. The organic materials, such as gasket or separator, may deteriorate or become deformed at high temperatures during prolonged storage. Thus it is recommended that Cadnica batteries be stored at temperatures below 35 degC if there is a possibility of prolonged storage surpassing 3 months." [35 degC = 95 degF]

"Either charged or discharged Cadnica batteries may be stored indefinitely. ... Though the capacity is recovered with a couple of charge/discharge cycles in either case, the capacity of a discharged battery is more quickly achieved."

Unlike lead-acid batteries, nicads are perfectly happy being stored in a discharged state. In fact, they prefer it.

"Batteries should be recharged prior to use after prolonged storage."

The reason for that is that various cells in the battery can lose their charge at different rates. If you then use the battery without recharging, the weakest cell can become reverse-charged by the other stronger cells. That can kill a battery.

I have always found that when my TV picture on Channel 2 looks bad, 6 meters is fabulous. We can usually see Channel 2 from far away (either in the Milwaukee area or from across Lake Michigan) beating with our own WBBM in Chicago when sky-wave propogation is better than it ought to be in the 50 MHz neighborhood.

Nope, sorry it's my fault. Every time I align one of my radios,
propagation dies. The last really poor propagation coincided with
aligning my R4-T4X. This time I got my TR4 back on the air and
realigned it. Both times I thought I'd screwed things up since I
couldn't hear any signals better than about S3-4.

Wonder how the Sun's corona knows what I'm doing? Perhaps the next time
I align a rig, I'll post a major geomagnetic storm warning. Sure prop's
getting better. It's been several weeks since I've worked on any of my
radios!

USED HF & 6m RIG PRICE SURVEY
22 Apr 1994 Version

Here is a list of actual transactions involving buying
and selling of used HF amateur radios.

I have absolutely no affiliation with any ham-radio-related
business. Rigs are sorted by maker, model, and price. All
transactions were made within the past three years. I welcome
any additional responses; please indicate maker and model of
your used rig, date bought/sold, how sold (Usenet, retailer,
on air, private, etc.), price, condition, and any accessories
or options. This survey is limited to used HF and 6m rigs only.
For prices on new rigs, consult the AES catalog, or call a
ham retailer for a quote. ("List" prices are usually much
higher than actual quoted prices.)

His ads in ham magazines usually have the "CB TO 10 METERS" headline.
I have a few of Lew's publications, and they are quite informative.
For a few bucks, you can get a rather extensive list of CBs and
whether or not they can be modified. (Many CBs, including most
Radio Shack CBs, cannot be modified) He also sells manuals on
how to perform the modifications. I have a converted Cobra 148,
and it works quite well.

If I recall, the Icom 726 was about $400 more than the 725. This
is certainly less expensive than buying a separate rig for 6m.
However, if you want to get serious about 6m DX, you will want
100 watts and a better receiver, and soon you will be in the market
for an Icom 575H. The HF-plus-6m rigs are great for getting your
feet wet with 6m; if it ends up that you're not that interested in
6m, then you still have the HF capabilities of the rig.

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
April 22 to May 01, 1994

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008
SKYCOM Announcement: (403) 756-2386

PROGRESS OF THE SOLAR CYCLE AND PROSPECTS FOR RADIO COMMUNICATORS
~~~~~~

Solar Cycle 22 is slowly edging toward solar minimum. Regressional solar models estimate solar minimum should occur sometime in 1996. At the present time, best guestimates place the time of solar minimum between about April and June of 1996 with an estimated smoothed sunspot number of around 6. Similarly, an estimated smoothed 10.7 cm solar radio flux value of around 72 is expected early in 1997 (presently predicted to occur around January or February of that year).

This solar cycle was unusual in that the rise-time from the solar-minimum of September 1986 to the sunspot maximum of July 1989 occurred in less time than any other solar cycle on record. This has led some scientists to speculate that solar cycle 22 may rapidly reach solar minimum more quickly than many models indicate. If this is true, we might reach a solar minimum as early as next year (1995).

The smoothed sunspot number for March 1994 was approximately 32. If current projections are accurate, smoothed sunspot numbers should continue to gradually decline until reaching a value of about 13 in December of this year.

What does this all mean for radio communicators? Radio communicators will find it increasingly difficult to reach areas of the world that have previously been open to communications. The decreasing strength of the ionosphere and its weakening ability to return higher frequency signals back to the Earth will increase the challenge for amateur radio operators to find optimum frequencies and times for propagating to other areas of the world. In addition, the increasing number of solar coronal holes and recurrent geomagnetic storms will have greater impacts on communications and for longer periods of time. A weaker ionosphere requires more time to recover to pre-storm conditions. Hence, communications will become more difficult.
~~~~~~

However, with the new tools that are available for estimating and predicting propagation conditions, the amateur and professional radio operators should be able to optimize their time and resources in searching for communicable areas of the world. The new SKYCOM Ionospheric Signal Analyst software is particularly well suited for this job. It provides you with more information than you may have dreamed was possible, in graphical maps and plots that are easily interpreted. For example, certain area's of the ionosphere are capable of supporting unusually high-frequencies, while other area's contain seeming voids where only the lower frequency bands are open. SKYCOM can show you these regions, quickly and easily, for any date, time, or level of geophysical activity. And if you're ever unsure about whether signals may actually reach your intended destination, SKYCOM will trace signals through the ionosphere and show you what happens to the signal as it travels from your transmitter to the receiver, even showing you where the signal strikes the ground nearest to your desired destination. It permits you to plan ahead of time and gives you firm ideas on how you want to tackle contacting certain regions of the world (ex. what frequencies to use, what elevation angles to use, what time of the day to use, what paths to use, etc). It gives you a DEAD-SERIOUS advantage for handling difficult propagation paths, under difficult conditions, and under a wide variety of adverse geophysical phenomenon. SKYCOM will handle geomagnetic storms, solar flares, sporadic-E, and even devastating polar cap absorption (PCA) in its analyses. And if you've ever operated a transceiver, you will find SKYCOM no more difficult to use. Set transmitter and receiver locations, or even regions of sporadic-E, with your mouse. Compute maximum usable frequencies for any path using the results of actual ray-tracings. Generate global maps of maximum usable frequencies, ionospheric F2-layer heights, critical E-layer frequencies, and HORDES more.

Take a good-hard look at SKYCOM. It may be the best in propagation software for radio communicators for some time to come and is almost certainly one of the best equipped performers for guiding communicators to optimum regions of the weakening ionosphere supportive of HF propagation.

For more information regarding the powerful new SKYCOM HF and refractive VHF propagation prediction software, contact: Oler@Rho.Uleth.CA, or COler@Solar.Stanford.Edu on the Internet, call our recorded message at: 403-756-2386, call our computer bulletin board system at: 403-756-3008, or write to us at the address above.

NOTES:
The 10.7 cm solar radio flux is plotted from data reported
by the Penticton Radio Observatory (formerly the ARO from
Ottawa). High solar flux levels denote higher levels of
activity and a greater number of sunspot groups on the Sun.
The 90-day mean solar flux graph is charted from the 90-day
mean of the 10.7 cm solar radio flux.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

: If my HT had an extended tx and I had use of a comercial freq. through my
: business (We have a repeater set up around 452 mhz), could I use my HT
: to communicate through the repeater (legally)??

NO!

: If no...Why not??

Because your HT is not type-accepted for use in commercial service.

: As long as I don't tx out of bounds, have the correct PL set- what's the
: harm?

There may be no harm done, but its just not legal.

This is one of those rare times when I have to come down on the opposite side of the fence from Al. I don't recall it being mentioned in the original post, but I assumed from the wording that the party in question was a true cw operator and would be running 25+wpm. Can you imagine trying to click your jaws at that speed...or puffing on a straw at that speed. It would be terribly frustrating for a cw op to be restricted to the speeds that could be accomplished using such archaic methods. Sorry, Al.

73, Gary - AG0N

P.S. Are you really in SR, Al? I have family there!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 22/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 22 APRIL AND FORECAST UP TO 25 APRIL

No warning is current.

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 085/027

1B. SOLAR FORECAST
23 April 24 April 25 April
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 21 April
Learmonth 07 3222 2112
Fredericksburg 05 12
Planetary 08 09

Observed Kp for 21 April: 2231 2233

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
23 Apr 10 Quiet to unsettled.
24 Apr 10 Quiet to unsettled.
25 Apr 10 Quiet to unsettled.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
22 Apr normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Apr normal normal normal
24 Apr normal normal normal
25 Apr normal normal normal
3C. GLOBAL HF PROPAGATION COMMENT
Conditions expected to remain normal until April 28.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 22 April: 50

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
23 Apr 45 Near predicted monthly values.
24 Apr 45 Near predicted monthly values.
25 Apr 45 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

SB QST ARL ARLB038
ARLB038 W6KG fund to be established

W6KG fund to be established

When Lloyd Colvin, W6KG, died last December, the League became the beneficiary of the proceeds of a life insurance policy. The proceeds, more than 150,000, dollar(s) will now fund an endowment, the income from which will be used to further the strengthening of international friendship through DXing.

ARRL Executive Vice President David Sumner, K1ZZ, said ''During his lifetime, W6KG made great personal contributions to international friendship through Amateur Radio in his visits to more than 150 countries, with his wife Iris Colvin, W6QL. Through the Colvin Award, the League will proudly continue those contributions.''

Announcement of the Colvin Fund was made at the International DX Convention in Visalia, California, on April 16. Details of the administration of the endowment have not yet been worked out.

ARLP016 Propagation de KT7H

ZCZC AP30
QST de W1AW
Propagation Forecast Bulletin 16 ARLP016
From Tad Cook, KT7H
Seattle, WA April 22, 1994
To all radio amateurs

SB PROP ARL ARLP016
ARLP016 Propagation de KT7H

Solar activity was up a bit over the past week, with average flux about nine points higher. Conditions were severely disturbed on the 17th, with auroral activity visible across the northern United States. Geomagnetic activity should stay mostly normal until the beginning of May, when recurring coronal holes rotate into view. Flux should rise to around 105 on May 3 or 4, and then fall back to current levels by the middle of the month.

K8MLV points out an error in last week's ARLP015 when it was reported that solar flux at the beginning of April was the lowest since 1987. Rick reports that as recently as September of last year the flux was 70, almost three points lower than the value mentioned last week.

Sunspot Numbers from April 14 through 20 were 28, 29, 26, 38, 38, 52 and 41, with a mean of 36. 10.7 cm flux was 79.4, 80.1, 81.7, 81.8, 84.2, 85.4 and 86.2, with a mean of 82.7.

The projection for this week is from Los Angeles, California to Paraguay.

80 meters looks good from 0200 to 1000z, peaking around 0430 to 0930. Check 40 meters from 0130 to 1100, with the best period from 0230 to 1000. 30 meters should be open from 0030 to 1130, peaking around 0230 to 1000. 20 meters should be good from 2200 to 0800, with the best signals after darkness covers both ends of the path. 17 meters should be open from 1400 to 0630, with the best signals toward the end of the period. 15 meters should be good from 1600 to 0500. 10 and 12 meters may be open on some days. Check 12 meters from 1730 to 0230 and 10 meters around 2100 to 2130.

Well now that I have the tower cleaned up and ready, what antenna should I get for a HTX-202? I want to just hook the wire up when ever I am in the room.The tower is a old TV antenna pole with the antenna taken off. Once I get this antenna where do I put it? What if I want to add another one later? Can I just put a cross and put one on each side? Or can I put one a little bit farther down the pole?

THANKS!!

>NO!
>Because your HT is not type-accepted for use in commercial service.

However, amateur equipment doesn't have to be type accepted. So, if
your business give you an HT that is type-accepted for the business
band, there's nothing to keep you from programming ham frequencies into
it and using it on the ham bands. That's fine, and strongly recommended.

For years, I converted surplus commercial gear to use on the ham bands,
and am amazed that anyone would ever want to convert ham gear to use
on the business bands.

1072. Looking for books

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-23 02:02:27 UTC
From: bobburr@HILDE.nurse.washington.edu
Message-ID: <2p9vjj$d3j@news.u.washington.edu>
Source record: 268168

When I was much younger I used to check out books
from the library that featured a teen age amateur
radio operator whose call sign was, to the best of
my memory, k6atx. The young hero lived in California
and had lots of adventures (along the lines of the Hardy
Boys). Usually he ended up being trapped by a drug
smuggler, but always escaped because of his knowledge of
amateur radio. I remember in one episode he turned a
grid dip meter and a length of wire into a transmitter
to send an SOS. His chums then did direction finding to
lead the police right to the villan's lair.

I've been trying to get a lead on these charming
works of juvenile literature, and if anyone knew
author/title/publisher information, I would be grateful
to learn of it.

Thanks,

Bob Burr

SYNOPSIS OF ACTIVITY

Solar activity was low. Two optically uncorrelated
C-class flares occurred, a C2 at 21/2214Z and a C5 at 22/0019Z.
Growth in Region 7705 (N06W00) has slowed. The region is now a
small D-type group. Region 7704 (N08E40) is little changed.

Solar activity forecast: solar activity is expected to be
very low to low. Regions 7704 and 7705 are the best candidates
for C-class flares.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 23 apr-25 apr

Class M 01/01/01
Class X 01/01/01

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

k6atx? Drug smuggler? Are you sure the bad guys weren't making
hooch? How old are you? :)

Let us know if you find out what it was.

And has anyone read the more recent books of this genre? They're
always hyping them in QST.

Depends on how much time the people at Gettysburg spend on the phone
answering questions vs. issuing licenses.

ARLB037 Vanity call comments

Vanity call comments made

The ARRL has filed comments on an FCC proposal, in PR Docket 93-305, to establish a ''vanity'' call sign program for amateurs. The League's comments are consistent with recommendations of its ad hoc committee on the subject, as reported in an April 11 official bulletin and in The ARRL Letter.

The League emphasized that an orderly assignment system is vital to ensuring as much fairness as possible in the issuing of such call signs, and to that end proposed a series of four steps, or ''gates,'' under which applications would be accepted.

The ARRL said that a one-time application fee for a vanity call sign was preferable to an annual fee, since the processing takes place only once, and that an ''up front'' fee would discourage frivolous, frequent requests for new call signs.

The League's comments also asked that those seeking a call sign formerly held, or the call sign of a deceased family member, not be bound by another recommendation, that call signs be issued only in the call area where the licensee lives.

Details will appear in June QST.

League, Red Cross ink pact

The ARRL and the American National Red Cross have signed a new Statement of Understanding, to lay out how Amateur Radio volunteers -- specifically, members of the Amateur Radio Emergency Service (ARES) and the ARRL National Traffic System (NTS) -- can assist the Red Cross in disaster communication.

The League and the Red Cross have had such agreements since 1940; the new agreement replaces one in effect since 1974, and defines ''disasters,'' acknowledges the Red Cross's recognition of the volunteer ARRL field organization for its ''emergency communications readiness,'' and specifies the ways in which the two organizations will cooperate.

According to ARRL Field Services Manager Rick Palm, K1CE, the new agreement differs from earlier agreements in two major ways. It promotes closer working relationships between ARRL volunteers and the Red Cross on the local level, and it calls for the development of specific guidelines for the origination and handling of health-and-welfare traffic and inquiries during and after disasters.

The agreement was signed in Washington, D.C., by ARRL President George S. Wilson III, W4OYI, and American Red Cross Senior Vice President William H. Reno.

1083. Re: software for KAM

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-23 13:44:55 UTC
From: jim@n5ial.mythical.com
Message-ID: <1994Apr23.134455.3917@n5ial.mythical.com>
Source record: 268006

NOTE: I'm posting this instead of e-mailing it because there does seem to be a lot of interest in this topic lately (normally, I would keep this limited to e-mail).

In article <CoM44L.8LG@cup.hp.com> genem@cup.hp.com (Gene Marshall) writes:

>Does anyone know of any better PC software for the KAM? I have recently >upgraded to the 7.0 version of the KAM and revision 3.2 of their >HostMaster II+ software. I am getting more interested in it w/PACTOR and >G-TOR, but don't really like their software package.

You might want to take a look at KAMterm. (Btw, I've had more than a few folks dump HostMaster and register KAMterm...don't know if this really means anything, though, since I've never run HostMaster.)

>So I can have my log open as well, I'm running HostMaster under Windows >(which it does just fine).

KAMterm should run fine under Windows. It is not, however, a Windows application. Of course, this doesn't really mean anything...all you have to do is have a dos window, just as when I'm running X here (which is rare...8 fast virtual consoles is better than 8 slow xterms) I use an xterm to run native UNIX applications.

The current version of KAMterm is version 1.22. E-mail me for further information.

>What I don't like about the package is you must always have an HF and >VHF window displayed. You can cut these down to 2-lines but I think it's >just implemented badly.

KAMterm displays windows differently. I, personally, prefer to avoid lots of clutter on the screen, so I made a split-screen approach the basis of KAMterm's windowing. The upper 20 lines or so is incoming text for the current port/stream, and the lower 4 lines or so is the outgoing text. When you change to another stream's window, the entire upper portion of the screen is replaced with a new window, and the status bar tells you where you're at. Windows are opened as needed (by either you or KAMterm---in host mode, KAMterm will open a window if it sees incoming text for a port/stream that doesn't have a window yet), and can be closed when you want to close them (except for the MONITOR and HOST COMMAND windows).

>Function keys are tripled-up with CTRL & ALT.

Ditto.

Here is a list of some of the more basic features of KAMterm:

--------------------------- CUT HERE ---------------------------

*) Each active stream has its own window.

*) There is a separate screen for command mode and for monitor mode.

*) You can switch between screens with a single keystroke.

*) There is a ``priority window'' that you can use to display any
incoming data on a given stream while working with another stream.

*) KAMterm is designed to be extremely simple to operate.

*) KAMterm will NOT modify your TNC's parameters unless you ask it to.

*) If you choose to do so, you have the ability to create startup and/or
exit command files that will configure the KAM for you.

*) When logging to a file, KAMterm will try to keep things organized by
adding a line above any text it logs indicating who said what.

*) In some menus, if you have a mouse, the mouse can be used for those
menus.

*) Normally, host mode does not have some of the things normal command
mode does---these are ``faked'' in KAMterm, and the appropriate
action is taken. These include:

*) fake command prompt (hcmd:)
*) |n to switch to VHF stream n for command window i/o commands
*) ~n---same idea, except for HF
*) a simple [CR] will result in new hcmd prompt (for aesthetics only)

*) Scrollback buffers are setup for each window if memory permits. Size
is adjustable via configuration file (kamterm.cfg).

*) KAMterm will notify you of incoming connects no matter where you
happen to be at the time.

*) Programmable function keys---[F1] is reserved for HELP, but
otherwise, any of the function keys ([F1] through [F10]) can be used
alone or in combination with [SHIFT], [ALT], and/or [CTRL] for your
own macros, etc. The limitation here is that the string is limited
to 80 chars.

*) Macro command files---just as you can have setup files for start
and exit, you can send macro command files to the KAM at any time
while running KAMterm.

*) ``Brag'' files are supported, too. You will be asked for the name of
the file you wish to transmit.

--------------------------- CUT HERE ---------------------------

In a previous article, cslye@netcom.com (Cameron Slye) says:

>Well now that I have the tower cleaned up and ready, what antenna should I
>get for a HTX-202?

I just got an HTX-202 myself. A couple of days ago I made a J-Pole
antenna using the 2 meter dimensions found in the "Plumber's Delight"
article in the April 1992 73 magazine (p16+). The parts cost less
than $6.00 and the antenna works GREAT!!!!! Very easy to build, I
highly recommend this project.

Good Luck -

Or even watts per centimeter in the HF bands. The hazards of RF exposure are quite greatly overrated, but that doesn't mean that you ought to be sticking your head in the feedhorn of that 1 MW erp RADAR rig. You get terrible headaches as a result of internal tissue heating.

The state of California has set up a very weird set of rules regarding RF exposure, which don't take into account frequency at all. Definitely a law set up by someone who had never taken an e-mag class.

> rec.radio.amateur.vhf.plus should it be created?

While I don't really know if there is enough interest, I would probably subscribe to it. Two suggestions though-

1) Rename to rec.radio.amateur.vhf-plus You will find this a lot more acceptable to sysadmins as it prevents another "layer" from being created. Further, it makes more sense from a hierarchical perspective.

2) Try starting up an alt.radio.amateur.vhf-plus first and see how it does, this requires no votes, etc. and will tell you whether or not support is there for a group in the "real" usenet. (I can probably help with this if you need it.)

Anyway, those are just a couple suggestions.

Well, I don't know about 25 wpm, but the idea is for the engineer to make
it easy for the person with the handicap, not the other way around.

So far I have seen a post that suggests $3000 is the chepest possible
price. While I rather doubt the figure, I wonder if it does not include
the $2000 already spent on the 486 and soundblaster. It is true that
many of last year's designs are DSP-based. This year many of the vendors
are moving to host-based systems (now that fast 486's are available).
I will post more when the vendor information arrives.

1092. GB2RS News 24th April 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-23 19:47:03 UTC
From: dave@llondel.demon.co.uk
Message-ID: <767155623snx@llondel.demon.co.uk>
Source record: 268020
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 24th of April and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

First the headlines:- Cheshire Raynet members save a boy's life; another RSGB Regional Meeting is scheduled; and we explain why the HF bands have been poor this week.

The May edition of the RSGB's magazine, Radio Communication, is due to be posted to all members early this week.

Amongst the news items in May RadCom is one concerning three Cheshire Raynet members who, whilst walking on Clwyd mountains on Boxing Day, came across an injured boy. They raised the alarm via the GB3MP repeater. The emergency services quickly responded and took the boy to hospital. He has now made a full recovery. The three heroes were Anthony Lewis, G6LBC; Graham Pemberton, G7NEH and Peter Baston, GW0PJA. Cheshire's County Emergency Planning Officer commented that the three "had undoubtedly saved Alfie's life" and that this was the quality of response that he had learned to expect of the Raynet group.

The RSGB has announced the date of another Regional Meeting. This one takes place at Brighouse in West Yorkshire on Sunday the 5th of June. These meetings are for members and non-members of the Society to meet Council Members, Society Officers and staff to discuss the workings of the Society and amateur radio related matters. For further details, contact RSGB Zonal Council Member Peter Sheppard, G4EJP, on 0964 550397.

The recently contested North Ferriby Amateur Radio Society Two metre Race was won by Malcolm Cohen, G4XWA. At the Club's Annual Dinner, Malcolm was presented with the winners trophy by club Chairman, Frank Lee, G3YCC. The North Ferriby ARS Memorial Trophy is competed for on an annual basis and is in memory of past members.

The RSGB EMC Coordinator for North Wales Chris Barnes, GW3BZD has had his telephone number changed. If you are an RSGB member living in or near North Wales, and you need EMC advice, call Chris on 0248 353940.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Tunisia, IK8EVE will be active as 3V8TM from Monday the 25th until the 15th of May from Jerba Island. No other details available.

From East Kiribati, JA1WPX will sign T32WP from Wednesday the 4th until Sunday the 8th of May on all bands, CW and SSB, but with the emphasis on 17 and 30 metres CW.

From Johnston Island, AH6IO will sign AH6IO/KH3 from Wednesday the 4th until Monday the 9th of May. Operation will be on 160 - 6 metres, with special emphasis on the LF bands. Check these frequencies 1.830, 3,795, 7,080, 14,195, 14,226, 18,130, 21,305, 24,950 and 28,495MHz.

From Ethiopia, OH2VZ has been heard on the 10MHz band signing ET3VZ.

And from Romania, the special callsign YR0DCF will be aired throughout the month of May to celebrate the 625th anniversary of the founding of the city of Braila.

Now the Rallies for today Sunday the 24th of April:

The Irish Receiving and Transmitting Society Annual General Meeting and Mobile Rally is being held at the Jacksons Hotel, Ballybofey, County Donegal, Ireland.

We know of no events for next Saturday the 30th of April, and only two for Sunday the 1st of May:

The 11th Anglo-Scottish Rally will be held at the Tait Hall, Kelso, Borders. Doors open at 11am. The event features trade stands and a bring and buy stall. Refreshments will be available and talk-in is on two metres, channel S22. For further details contact GM4UFP on 0750 20006 after 6pm.

And the British Amateur Television Club (BATC) Rally is to be held at The Sports Connection, Leamington Road, Ryton-on-Dunsmore, Coventry. Please note this is a new venue for this rally. The event features the usual trade stands, demonstrations, a lecture programme and a bring and buy stall. Refreshments will be available. For further details contact Mike, G6IQM on 0788 890365 or Fax 0788 891883.

And now the two rallies we know for Bank Holiday Monday the 2nd of May:

The Dartmoor Radio Rally is to be held at the Yelverton Memorial Village Hall, Meavy Lane, Yelverton, Devon. Doors open at 10.30pm. The event features trade stands, a bring and buy stall and other attractions. Refreshments will be available and talk-in will be on channel S22. For further information contact Ron on 0822 852586.

The Mid-Cheshire Amateur Radio Society Rally will be held at the Civic Hall, Winsford, Cheshire. Doors open at 11am, or 10.30am for disabled visitors. The event features trade stands and a bring and buy stall. Refreshments will be available and talk-in will be on two metres, channel S22 and seventy centimetres, channel SU22. For further details contact Dave, G4XUV on 0606 77787.

Now some dates for your diary:

This year's RSGB Headquarters Open Day is scheduled for Saturday, the 4th of June. Details can be found in the May RadCom.

The RSGB National Mobile Rally is to be held at its usual venue on Sunday the 7th August at Woburn Park, Bedfordshire. For further

information contact Norman Miller, G3MVV on 0277 225563.

HF contest news now:

The Helvetia (Swiss) Contest takes place this weekend and finishes at 1300 today, Sunday the 24th, after running for 24 hours. Use CW only on 1.8MHz, and CW and SSB on 3.5 to 28MHz but excluding the WARC bands. The contest is rather complex so participants are advised to consult the rules which can be found in the April edition of RadCom on page 19.

The fourth in this year's series of RSGB QRS (Slow Morse) Cumulative Contests will take place next Friday the 29th of April from 1900 to 2030 UTC between 3.540 - 3.580MHz. See April RadCom page 8, for further details and January's RadCom, page 83 for the rules. Novice licensees are particularly encouraged to participate as contacts with Novice calls are worth quadruple points.

The Yeovil QRP Funrun Contest starts on Monday the 2nd and runs daily from 8 to 10pm local time until Friday the 6th of May. See April RadCom page 73 for full details.

Next some VHF contest news:

The first of seven RSGB 10GHz Summer Cumulative Contests takes place today, Sunday the 24th, from 0900 -2100 UTC. See April RadCom page 82 for further details.

The RSGB 70 Centimetre Trophy Contest is scheduled to take place on Saturday the 7th of May, from 1400 to 2200 UTC. Starting at the same time is the 432MHz to 24GHz Contest which is a 24-hour event. See February RadCom, page 83 for further details of both events.

Special event stations this week include:

GB2AMN, which will be aired by members of RAF Finningley Amateur Radio Society from the Newark Air Museum, from 10am to 6pm on the HF bands and two metres.

GB2PCI will be aired during next Saturday the 30th from 10am to 4pm, from the Gosford Forest Park, County Armagh. The occasion is the youth activity day of the Presbyterian Church of Ireland. The station will operational on 40, 20, 17 and 15 metres SSB, with some activity on 2m. For details contact GI0NCA on 0504 860192 after 6pm or via packet at GB7WRI.

GB0XXV, will be used until the end of September to celebrate the 25th Anniversary of the Thornton Cleveleys Amateur Radio Society. The station will operational on HF, VHF and UHF, with G4ATH on 160 metres and G6GMW on VHF and UHF. For further details contact G8RDP, whose address is correct in the RSGB Call Book.

From time to time, members of the RSGB Propagation Studies Committee produce technical papers for professional conferences. Anyone who would like copies of these papers should contact Propagation Studies Committee

member Ray Cracknell, G2AHU on 0568 780614.

And now the solar factual data

The period from the 11th to the 17th of April has seen continuing magnetic storms, a mass coronal ejection affecting the south east quadrant of the sun, filament disintegrations, and an aurora. A massive restructuring of the sun's surface features is now taking place. The HF bands have been seriously affected. The only good news is that the very high levels of electron fluence have at last died down.

There have been some 'sub B' flares but details were buried under all the other events. The mass ejection which started on the 14th masked any black-outs and sudden storm commencements. The sun spot indices meaned at only 19, with general solar activity remaining very low. Solar flux levels have also remained low and averaged only 77 units. The 90 day mean on the 17th was 94 units.

The geomagnetic Ap index has varied from 'storm' up to 'severe storm' levels all the period. The mass ejection started on the 14th and continued through the 15th together with the disappearance of some small filaments. A magnetic storm commenced at 20.04 on the 16th raising the Ap levels to 33 units. Levels rose further to 67 units at mid latitudes by the 17th. At high latitudes levels went up to 130 units. The major storm took place from midnight on the 16th up to mid-day on the 17th which made it hard going for the GB2RS news service on the eighty metre band. Critical frequencies were down to only 3.4MHz with only the F1 layer being detectable. The K indices rose to K9 over the 16th and 17th with levels of K5 and K6 on the other days. The Ap indices averaged 35 units for the period. The state has been 'Mag storm mass ejection' most of the week.

The aa indices, as supplied by the British Geological Survey for the period from the 5th to the 11th of April, gave daily averages of 64.4 nanoTeslas about K4, but it was a very disturbed period, with many periods over 100 nanoTeslas; there was no quiet period. The X-Ray flux rose from A1.0 on the 12th up to A4.8 on the 17th. All the X-Ray activity was in the mass ejection area of the sun. The 'greater than 2 Mega-electron volts' electron fluence has been very high for the past month with levels around 2.5 plus 9. However, on the 17th levels dropped to 1.3 plus 7 which is about normal for this time; it is hoped that this will have an effect on stabilising the HF bands, particularly for the more northern stations.

I'll repeat the figures. Spots - 19; Flux - 77; Ap index - 35; X-ray flux - A2.8.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged only 5.5MHz. The 17th was down to only 4.3MHz, with the peak not being reached until 19.00 hours. There were long periods up to 9 hours some days when only the F1 layer could be detected. The darkness

hour lows averaged 2.3MHz with periods of spread F lasting through the early morning hours.

I'll repeat the figures. Highs - 5.8MHz; lows - 2.3MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg have been seriously affected by the magnetic storms, but levels were about 5.5MHz. The darkness hour lows were about 2.2MHz.

I'll repeat the figures: Highs - 5.5MHz; lows - 2.2MHz.

And lastly the solar forecast:

This week, with the massive restructuring taking place on the sun, it is very uncertain as to what is happening. It may well be 2 or 3 weeks before the new features become established, but it is hoped that the magnetic activity will now die down. The best guess is that the more solar active side of the sun will be rotating away and magnetic activity will be at about 'unsettled' levels. Daytime ionospheric MUFs are expected to be more like normal levels, about 21MHz in the south. But the seasonal changes will make east/west circuits rather difficult. The northern levels will be down on this but much depends on the magnetic activity.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Uniform and G7 Sierra Hotel series, and Novice calls in the 2 0 Alpha Hotel and 2 1 Charlie Uniform series.

You're listening to GB2RS, the news broadcasting service of the Radio Society of Great Britain, transmitting in the 80, 40, 6 and 2 metre bands.

>demise of the vhf list run out of Stanford University and the lack of any
>other news group for this area. The major unknown is if there is enough
>interest to set up a formal RFD/CFV for this area.

Since I (loosely) run the vhf+ mailing list, I figured I'd better comment
here.

I started the list about two years ago, maintaining it by hand instead of
setting up some sort of automated listserver. This had both good and bad
consequences; I was able to exercise some judgement over what went over
the list, but I don't have enough free time these days to maintain it.
Part of the problem was that most of the list requests I received indicated
an interest in FM and Repeaters, which is *not* within the scope of the list.

I've considered starting an RFD for a newsgroup from time to time, but given
the fairly low level of traffic on the list (which has a fairly high signal
to noise ratio) I'm not sure this is desirable. Sooo...

I'll see if I can come up with some sort of automated listserver this
weekend, and set it up. If folks really want to set up a newsgroup, that's
okay too; I probably won't tie the two together.

In my opinion, they're all pretty badly written. There's one from MFJ, -The Fox Hunt Adventure- that's slightly better (I stress the slightly).

I recently sold a complete Drake station that had not been powered up for over twenty years--it included an L-4B. The new owner brought everything up slowly with a variac over a period of four hours. At last report, everything was working perfectly...including the L-4B. Your milage may vary. :-)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 APRIL AND FORECAST UP TO 26 APRIL

No warning is current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 085/027

1B. SOLAR FORECAST
24 April 25 April 26 April
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet to unsettled, with one
active period.

Estimated Indices : A K Observed A Index 22 April
Learmonth 12 2223 4332
Fredericksburg 08 06
Planetary 08 07

Observed Kp for 22 April: 2222 3222

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 Apr 10 Quiet to unsettled.
25 Apr 10 Quiet to unsettled.
26 Apr 10 Quiet to unsettled.

2C. MAGNETIC COMMENT
Quiet-unsettled conditions expected until April 28. Slightly
disturbed field overnight.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Apr normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Apr normal normal fair
25 Apr normal normal fair
26 Apr normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
Conditions expected to remain normal until April 28.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 23 April: 39

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
24 Apr 40 Near predicted monthly values.
25 Apr 40 Near predicted monthly values.
26 Apr 40 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Some weak spread F observed during local night.

Cameron Slye <cslye@netcom.com> writes:

>I am wondering if I will be able to use 2 meter with only a novice permit? I
>want to go for tech, but just wondering if it is worth it.. Since I only
>plan on using 2meter... Also is there a quiz type program out there for a

No. Well, not really. Novices cannot transmit on 2 meters. However,
some clubs keep a 220 MHz repeater "locked" to their 2 meter repeater so
that Novice transmissions on 220 will be sent out over 2 meters.

Why not study a little more and get the Tech ticket? Well over 90
percent of new hams get the Tech license first. given your interest in
two meters, it seems like the clear way to go.

..Neil, N3DF

1101. Request for Responses

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-23 23:51:25 UTC
From: adam@rangr.stat.com
Message-ID: <e1B0kc2w165w@rangr.stat.com>
Source record: 267780

Hi folks,in reading several messages during the last couple of
months Ive noticed that there are always requests for support of the
different responses to pending or proposed legislation around the
country.Most of the time I would like to respond in support of the
request,however like most of you I am very busy.There is one thing that
would make it easier to support these requests and that is if you would
include a FAX phone number to send a responce to.It is much easier for
me to pound out a fax and send it on the weekend than to sit down and write
a letter,and almost impossible for me to make a call during normal business
hours as I have a field job.Im sure there are many folks just like me who
would like to support the causes of justice :) and common sense.I hope
noone takes offense at this.All causes are important and any way to maximize
response should be good sense.Thanks for allowing me my soapbox!

Rane- The automatic tuner uses several small relays to switch fixed value inductors on or off. If you used your tuner to tune a random length wire or attempted to tune a resonant antenna too far off it's resonant frequency, high current flows thru the small relay causing it to fail.

The tuner was designed to allow the user to tune slightly above and below the resonant frequency of an antenna- example: a 20 meter yagi that is resonant on 14.215Mhz. Assuming a VSWR of 1.2/1 on 14.215 and 3.0/1 on 14.100, the tuner would accomodate this situation easily.
If you attempted to tune this antenna on 3.950Mhz, you would be asking for trouble, not to mention the efficiency of the system would be unacceptable.

The tuner is designed for unbalanced (coaxial feedline) loads, not random wire or twin lead.

Good Luck!

Whoa, slow down! In your case, I'm confident a call to Gettysburg is
warrented. But, I think Dan had a good point overall. If one calls them, it
is time they are not entering licenses into the computer. That's why they tell
you not to even think about it for 8-10 weeks.

And, if you think you're smart, it's really a voice mailbox. :)

What VEC? The ARRL VEC? Or did you mean the VE's and the ARRL VEC told you
to call. However, if you were told the average wait was 10 to 12 weeks and
you have waitied 17 weeks it is reasonable to call. If it has only been 7
weeks and you are calling requlary then you are just wasting the FCC's
time and CAUSING delays. Now, do I need to spell it out step by step for
you? Or can you understand that every hour spent on the phone is one hour
that can NOT be spent issuing licenses (and doing related paperwork)?

And I don't THINK I am smart, I KNOW that I am smart. At least I can
understand time managment and the differance between a VE and a VEC.

Cameron Slye (cslye@netcom.com) wrote:
: What the heck is simplex? I hear about, just dont know what it really is.
: --
: cslye@netcom.com

Simplex is a common term used on VHF/UHF FM and to a lesser degree on HF. It simply means that both (or all participating stations) are transmitting AND receiving on the same frequency. For example, on 2 meters, 146.52 is a common "simplex" frequency.

Simplex is/should be the preferred mode if and when both stations can receive each other well. This avoids unnecessary congestion on the repeaters

On the other hand, when using a "repeater", the transmit and receive frequencies are usually offset ... in the case of the USA, on 2 meters, by 600 KHz.

On the HF bands, particulary when there are DXpeditions .. that is stations operating from fairly rare "countries" .. often not more than a reef in the middle of the ocean ... the transmit and receive frequencies may be separated by 10 or 20 KHz or more. This is useful because with so many stations calling .. it is sometimes impossible to hear the DX station. This way, we can keep his transmit frequency clear.

Hope that helps.

>
>Thanks,
>
>Bob Burr
>bobburr@u.washington.edu
>

Wow Bob! That really sent a wave of nostalgia through me! I have the book
right in front of me. It is called <SOS at Midnight> by Walker A.
Tompkins, published by Macrae Smith Company, Philadelphia, Copyright 1957.

I read that book many times as an SWL, hoping to get into ham radio and it
was one of several significant formative drives for me to get licensed.

Remember how they also used Gonsicators (Gonset Communicators on VHF)?

It is very much a Hardy Boys Do Ham Radio sort of read but still fun!

Hope this is helpful...

73, Rob

By the way . . . you are correct, it was K6ATX, Tommy Rockford as the hero and his buddy
Spud Kleveland was always on hand to join in the zany, madcap antics.

They certainly were not Pulitzer material . . . very much like the Hardy Boys style where characters are always exclaiming or croaking weakly or insisting or suggesting.

Not much doubt they were aimed at a high school audience.

Cheers and 73...Rob

: >Dan Pickersgill (dan@amcomp.com) wrote:

: What VEC? The ARRL VEC? Or did you mean the VE's and the ARRL VEC told you
: to call. However, if you were told the average wait was 10 to 12 weeks and
: you have waitied 17 weeks it is reasonable to call. If it has only been 7
: weeks and you are calling requlary then you are just wasting the FCC's
: time and CAUSING delays. Now, do I need to spell it out step by step for
: you? Or can you understand that every hour spent on the phone is one hour
: that can NOT be spent issuing licenses (and doing related paperwork)?

No, it wasn't the ARRL VEC. I called W5YI-VEC. Yes, the VEC, in Arlington,
Texas. They answer W5YI-VEC, W5YI-VE. And guess why? They're the
coordinator, not the examiners!! Sorry if I just kindof jumped the gun
there, but I get a little peaved when people tell me I shouldn't call
the FCC. My first call to the FCC wasn't until week 14. Is that waiting
long enough????

: And I don't THINK I am smart, I KNOW that I am smart. At least I can
: understand time managment and the differance between a VE and a VEC.

You know, I'd be surprised, you thought I called the VE ;)
I *did* call the VEC, not the VE, and I *do* understand time management.
I wrote Bart Jahnke (remember him??? If you don't look in _QST_ for the
examination coordinator under ARRL staff) and *he* also told me to call.
I personally thought 14 weeks was a long enough wait. Is that time
management you mentioned supposed to apply to yourself or the FCC??? That
really didn't make any sense.

Again, sorry that I kinda exploded there, but you should realize that
some people *do* wait the waiting period and try all other resources
before calling the FCC before you say that it is wasting everybody's time.
Even if it *is* wasting everybody's time. . .

SB DX @ ALLBBS $OPDX.156
Ohio/Penn DX Bulletin No. 156

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 156
BID: $OPDX.156
April 25, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DL7VEE & DXNL, DF4RD, IK1QBT, IK4CIE, OH2BBF, PA3BIZ, VK2PS, DXAC & ARRL Bulletins, K4CEF & Southeastern Cluster Group, WB1HBB, NA2M, N5SUM, N8RFK and KF8VW for the following DX information.

3V8, TUNISIA. The DX NewLetter reports that a DXpedition by Tom, IK8EVE, from Jerba Island using the call sign 3V8TM will start April 24. ADDED NOTE: Paul, WB4LFM, had a telephone conversation with DK2OC and he has told him that DK2WV has just received the QSL cards (from the printer) for his 3V8W operation last summer.

4U9ITU, I.T.U. HQ. Tony, IK1QBT, wants "Prefix Hunters" to take note. This special call sign will be used May 20-22th from ITU Headquarters station in Geneva. The operators will be an Italian team consisting of Tony/IK1QBT (operating CW), Frank/IK1HLG and Mauro/IK1CJO (both operating SSB and RTTY). Activity will be on all bands 160-10 meter, including the WARC bands. A special QSL will be printed. QSL to I1YRL, Luc Glarey, Via S. Martino 11, 10091 Alpignano (TO), Italy. ADDED NOTE: Luc, I1YRL, is also to be active during the month May using the same call, but Luc was not mentioned as an operator in Tony's correspondence.

9H, MALTA. A large group of Dutch operators will be active from Sliema, June 24th until July 4th. During their DXpedition/Holiday they plan to be active on 70 cm, 2 meters, 6 meters and 10-80 meters (including the WARC bands). Operations will be on CW/SSB and they also plan some AO-13 activity. Look for the following operators: Frits/PA0BEA/9H3IE, Wim/PA3BIZ/9H3ON, Hank/PA0PRT/9H3IB, Ada/PA3DNW/9H3KF, Frank/PE1KNL/9H3QH, Egbert/PA3ETB/9H3KD, Jan/PA0JWK/9H3QD, Nick/PA0PAN/9H3KE, (the following have not received their callsigns yet) John/PB0AES, Peter/PE1NZA and Teun/PA0TPM. QSL to operators CBA.

ET, ETHIOPIA. OH2VZ is now signing ET3VZ and was heard this past weekend on 21033 kHz at 1325z. At this time no other information is available

on this station. QSL via OH2VZ.

OJ0, MARKET REEF. Look for Steve/OJ0/AC6T, Lars/OH0MB, Seppo/OJ0/OH1VR, Touko/OJ0/OH6RM and Eric/OJ0/OH2BBF from May 14-17th (weather permitting, transportation via a helicopter). The group plans to be active on all bands, including 6 meters, using CW/SSB and some RTTY. QSL to home calls (OH0MB is one of the three valid "old style" Market Reef callsigns, this one belonging to OH0RJ).

SV/A MOUNT ATHOS. Apollo, SV2ASP/A, was heard on 18148 kHz between 1400 and 1445z. Very "FEW" stations were calling him. At the present, the DXAC is looking at a motion by N2SS to re-examine to see whether or not Mt. Athos mets the present DXCC criteria in effect. This vote was to take place in March, but due to problems in the wording of the question on the March ballot, a re-vote in scheduled for sometime in May.

T32, EAST KIRIBATI. Tada, JA1WPX, will be active as T32WP from May 4-8th. Activity will be on all bands, CW/SSB, but special attention will be on 30 and 17 meters CW. QSL via CBA.

TK, CORSICA. Seven Italian operators will be active from here May 19-23. Activities are planned for an all band operation (160-10 meters, including the WARC bands) on CW and SSB. This well equipped operation will operate on the usual DX frequencies with an emphasis on the WARC and the lower bands. Look for the following stations: SSB - TK/I4ULA/P, TK/IK4HAL/P, TK/IK4NZD/P and TK/IK4GLV/P. CW - TK/I4VJC/P, TK/IK4CIE/P and TK/IK4IDW/P. A full colored QSL with photos are available by sending your QSLs to the operator that you have worked (via the Bureau or to their CBA).

VK9. LORD HOWE ISLAND. VK2PS reports that Tony, VK9LA, is a long time resident of the island and can be found on 7084 kHz at 1130z with the "Pacific RIM 40 DX Group". VK2PS also reports that the Callbooks have many mistakes and very old information regarding VK9's and VK0's; and VK9LA's address is one of them. QSL VK9LA to: A.J. (Tony) Blasl, c/o Post Office, Lord Howe Island, NSW 2898 - Australia.

VP9, BERMUDA. Bill, WB1BRE, ARRL New England Division Director, will be signing WB1BRE/VP9 on the "birds" from May 13 through May 26. Operations will be on AO-13 and AO-10 when available. Best operation with his portable setup occurs just before and after Mode S at apogee. Downlink frequencies will be between 145.910 and 145.930. Operation will be limited to SSB. When not on satellite, Bill's low-band operations will be on 20, 15, and 10 meters SSB, primarily in the lower portion of the General bands and in the Novice portion of 10 meters. He will be using an IC-735 with an R5 vertical, and operations will be dependent on band and beach conditions. QSL to WB1BRE.

XU, KAMPUCHEA. Laci, HA0HW, will be active from Phnom Phen as XU0HW, from May 8-20th. Activity is to be on CW/SSB and on all bands (160-10 meters, including the WARC bands). Laci will be joined by Sanyi, HA7VK, who is presebtly signing XU7VK, to activate a new IOTA. Both will travel

to Rong Island in the Gulf of Thailand to be active for about 5 days using the callsign XU9HA. QSL all three call signs to: Laci Szabo, P.O. Box 24, H-4151 Puspokladany, Hungary.

ZS8, MARION ISLAND. Christie, ZS8MI, is still on and will be leaving in about 2 weeks. Frequencies and times are not particularly good for the U.S., but he may still be workable. Check 28354 kHz at 1100Z, 18162 kHz at 1145z and 14130 kHz around 0600Z.

DXAC VOTES. The DXAC has unanimously voted to recommend to the ARRL Awards Committee the deletion of Walvis Bay (ZS9) and the Penguin Islands (ZS0,1) as of March 1, 1994. The vote for consideration to add single-band, endorsable DXCC awards and endorsements for the 5BDXCC award for 15, 20, and 30 meters was defeated (2 votes in favor and 13 votes against, with 1 abstention). The vote to add an Honor Roll endorsement for the 10 meter DXCC award was also defeated (15 against and 1 vote in favor). More details are available in ARRL DX Bulletins 22 (ARLD022). ADDED NOTE: The DXAC Chairman (W4VQ) has added the question of new country status for Pratas Island (BV9) back on the DXAC agenda. The reason is the Chinese Taipei Amateur Radio League (CTARL) is now in contact with the DXAC and is providing the answers to Committee questions. A vote on the question of DXCC country status for Pratas has not been scheduled at this time.

NEW QSL ROUTE. There has been a change in the QSL route for TI9CF and TI9JJP. This is due to the large amount of pilfering going on in the mail service of Costa Rica. QSL these to stations to: Office Box Acct 321 CR, 3900 NW 79th Avenue - Suite 564, Miami, FL 33166. The mail will be delivered by courier service to Costa Rica.

SPECIAL NOTE FROM EDITOR: There will be no bulletin next week (May 2). I will be at the Dayton HamVention, but please keep sending your DX information.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

1126. What are the dimensions for a 2m J-pole?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-24 18:02:53 UTC
From: ez045506@dale.ucdavis.edu
Message-ID: <CorzGt.9wC@ucdavis.edu>
Source record: 268023

I just built a 2m j-pole (without instructions or dimensions by c/f) and it seems to be working good. But, one problem I have is that the SWR is low over only a narrow band, like about + or - 1meg.

I built it out of 1/2 inch copper tubing by sweating it together.

Questions:

1. Does the diameter of the tubing effect the various j-pole dimensions?
2. What are the dimensions for a 2m j-pole at 146MHz?

Thanks.

Timothy McNulty N6HFS tjmcnulty@ucdavis.edu

>frequencies may be separated by 10 or 20 KHz or more. This is useful
>because with so many stations calling .. it is sometimes impossible to
>hear the DX station. This way, we can keep his transmit frequency
>clear.
since Cameron seems to be a relative newcomer to amateur radio it may be
worthwhile to note that the type of operation Sandy described above on HF
doesn't involve a repeater and is often called working split.

Do you have a license yet Cameron?

cheers,
Dan

I am soliciting input for a paper I am writing. Pardon its simplistic stage.

I would be most grateful for any comments, reflections, additions, reference to sources, etc. All sources will be credited.

I will be at Dayton Thursday til Sunday at the Hampton Inn in Englewood with the Frankford Radio Club contingent, and evenings at our contest hospitality suite at Stouffer's. I would love to interview anyone interested.

Thanks. Bob

Evolution of Postwar Amateur Radio in the United States

Bob Penneys, WN3K
copyright 1994, all rights reserved

The purpose of this paper is to describe development of amateur radio in the postwar United States.

Overview of history of amateur radio and licensing since inception

Traditional raison d'etre of amateur radio - Technical expertise, pool of operators, emergency and public service communication

World War II-

Individuals learn radio in the service

Legendary feats of wartime radio operators; radio critical element in victory

Eager and knowlegeable veterans return from war with expertise in radio communication

Rise of amateur radio in US

Great availability of inexpensive surplus equipment

Tradition of amateurs of inventors - FM, RTTY, moonbounce, etc.

Necessity of technical skills to modify surplus

Elmering of youngsters

Economy and satisfaction of kit building

Proliferation of manufacturers and radio stores

Inexpensive tube rigs, easy to build, align, repair

Hands on culture

Peak of ham radio in late 50s

Contests, Field Day

Emergence of SSB

Sputnik- increase of focus on science, technology

IGY

HF only link with South Pole, etc.

Amateur satellites - OSCAR

Public listens to Sputnik, satellites through amateur radio

Advent of CB- easy inexpensive communication

Legal, no license

Abuse of CB, channel 19, etc.

Change from tube to semiconductor technology

Beginning of gradual shift of r and d, manufacturing, of technology offshore (Japan), continuing to present

Decline of kits, components, surplus, mods, elmers, radio mfrs, stores, number of amateurs in 60s and 70s

Viet Nam use of radio - phone patches, MARS

Transition from rf to digital world in starting in 70s

Incentive licensing in 1968- anger, resistance, withdrawal of amateurs

Loss of frequencies by General Classs

Disappearance of old guard - Hallicrafters, Hammarlund, National, Collins, Gonset, Heath

Gradual disappearance of national marketers such as Lafayette and Allied from amateur radio

Emergence of Radio Shack and electronics in popular culture

Emergence of major Japanese manufacturers - Kenwood, Icom, Yaesu also TenTec in US

Decrease of homebrewing

Decline of user maintainable and easily modifiable radios

Decrease in need for technical skills, building, repair, design of radios

Emergence of two meter FM and repeaters - easier local communication

Emergence of autopatch

Emergence of digital modes - packet, Amtor, etc

Rise of "appliance operators"

Trend of buying rather than building a high tech radio

Rise of QRP, digital modes, foxhunting, satellite, ATV, slow scan, EME as areas of expertise

Debate of no code license - demise of old guard of CW ops

Migration from RF to computer communications

Digital, satellite communications replaces HF as most dependable link for long distance

PCs dominate business and culture in 80s

New kind of person interested in technology - computer user

Emergence of cellular phones - personal wireless communications shifts from exotic to familiar

Aging of Morse code operators -

Success of no code license - inflow of new amateurs

Shift from Novice to Technician as entrance license

New style of operator - wants to communicate, not necessarily old kind of technical hobbyist, wants radio and license for spouse, children

Wireless radio operators become less "nerdy," more mainstream

Migration from HF to VHF and UHF as new modes need increased bandwith for greater throughput; new modes less susceptible to vicissitudes of propagation than HF; HF moves down "food chain"

Current scene-

Increase in dollar value of spectrum; loss of 220MHz, competition and auction for spectrum

HF still best link in most emergencies - Russia "White House", Sarajevo, hurricanes

Tradition of amateur as contributor, inventor, necessary link in emergencies called into question

Two meter mobile and portable FM still supreme

Ease in DXing

Great hobby and mode of communication for handicapped

Trends in Scouts, school programs for teaching radio

Use of autopatch, reporting of accidents, emergencies

Migration of frontier to digital and UHF- SHF world

New trends - full duplex phone

Future of amateur radio-

Obsolescence of raison d'etre of amateurs?

New modes, equipment, market?

Summary and conclusion

SYNOPSIS OF ACTIVITY

Solar activity was very low. All Regions were relatively
quiet. Region 7705 (N05W13) is a small, maturing D-type group.
Other regions have changed little.

Solar activity forecast: solar activity is expected to be
very low to low.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 24 apr-26 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 24 apr-26 apr

A. Middle Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
Similar conditions will persist over the next 3 days at least,
through 26 April inclusive.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

1132. Uploading to Oakland Ham FTP area

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-24 20:22:41 UTC
From: wy1z@bach.coe.neu.edu
Message-ID: <WY1Z.94Apr24162242@bach.coe.neu.edu>

Cross-posted to: rec.radio.amateur.misc,alt.radio.scanner,rec.radio.scanner,rec.radio.shortwave

Many people have uploaded files to the ham radio area on
oak.oakland.edu (/pub/hamradio/incoming).

But, what many have failed to do is e-mail me after the upload.

This presents at least two problems: 1) Notification in a timely manner,
resulting in a delay in access for others; 2) If anything is wrong with the
upload, I don't have anyone to contact for a retransfer.

What is the moral? If you upload a file to the FTP area, please let me know.

Thanks much.

73,
Scott

1133. Need info on Kenwood rigs

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-24 21:33:00 UTC
From: herald@envmsa.eas.asu.edu
Message-ID: <24APR199414334035@envmsa.eas.asu.edu>
Source record: 267779

Hi, I am considering purchasing my first quality HF rig, or at least I am kicking around the idea. I need some info about the TS 850/840, the TS 440 or 450, and the TS 940 and 950 and comparisons between them all. What is the price range for these rigs, both used and new? I think that the 900 series rigs have more bells + whistles than I really need, but I am not too sure. My needs are primarily:

- A very high quality general coverage rig, including quality audio output
- All mode operation
- filtering and tuning features, like split VFOs, slope tuning, etc.
- memories for frequently used channels
- DSP, if possible
- price range under $1500 is preferred, and new is preferred to used
- Kenwood is my preferred brand name, but Icom is a possibility.

I might be willing to spend more if the performance justifies it. Anyone with ANY info on the current rigs on the market, PLEASE email me. If you know of an independant rating service, similar to Consumer Reports, which rates the various rigs on the market, this would also be appreciated.

Thanks a lot, in advance, for any info.
Bert, WF7I, Tempe, AZ

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 APRIL AND FORECAST UP TO 27 APRIL

No warning is current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 083/024

1B. SOLAR FORECAST
25 April 26 April 27 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 082/023

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 23 April
Learmonth 09 2232 3311
Fredericksburg 08 10
Planetary 10 09

Observed Kp for 23 April: 1123 2233

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
25 Apr 10 Quiet to unsettled.
26 Apr 10 Quiet to unsettled.
27 Apr 10 Quiet to unsettled.

2C. MAGNETIC COMMENT
Quiet-unsettled conditions expected until April 28.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
24 Apr normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Apr normal normal fair
26 Apr normal normal fair
27 Apr normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 24 April: 47

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
25 Apr 40 Near predicted monthly values.
26 Apr 40 Near predicted monthly values.
27 Apr 40 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

1137. Re: Drake L-4B amp & control cable questions

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-24 23:07:51 UTC
From: bat@gdstech.GRUMMAN.COM
Message-ID: <BAT.94Apr24180751@gdstech.GRUMMAN.COM>
Source record: 267923
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

Some years ago, I also acquired an L4B which had been sitting
for many years. I did what the others all suggested; pull the tubes
and apply voltage slowly with a variac. Since I didnt know
how long it would take to reform the caps, I put 10 volts
into the line for a few hours. Then increased it by 10 every day
until full line voltage was going in. It ran each day for a few hors
while I was in the shack to watch it. Seems to have been a good idea,
the amp works great.
Also, there was no control cable with mine. I drilled a small hole
2 inches away from the old socket, and put in an RCA phono socket.
Problem solved for 39 cents. -pat

Many Hams use CommSpec CTSS cards in their radios. These things
are small, good, and cheap (around $38). Excelent for older radios.

Here's a question that's been bothering me for some time -- an article in April's QST reminded me of it.

This article, and other material I've seen, pooh-pooh the idea of a low SWR. (Maybe I should preface this by saying I'm not a 1:1 SWR fanatic, though. :-) These articles say that as long as you have low-loss cable, most of the energy bouncing back and forth between the transmitter and the antenna ends up going out the antenna anyway.

My question is: since the transmitter is matched to the line, why does the reflected energy coming from the antenna get reflected again at the transmitter? Why isn't it all (or mostly) absorbed in the finals?

Any comments?

Wow, if my priest gave out that kind of penance for peccadillos like a test message on r.r.a.m, I'd get seriously calloused knees. :-) It's an odd one, anyway -- half in Latin, and half in English. Does this mean that you still haven't decided whether or not you approve of the decisions made by the Vatican II council? :-)

WD0E Attends JAMSAT Symposium

Jim White (WD0E) reports the annual JAMSAT Symposium was held in Tokyo on 27-MAR-94. Jim attended representing AMSAT-NA and presented a paper on MICROSAT construction and operation, the Deep Space Exploration Society (DSES) radio telescope project at Table Mountain near Boulder, CO, and the high altitude balloon experiments of the Edge of Space Sciences (EOSS) group. The day long symposium included presentations on the construction and use of quadrifiler helices, a version of the MICROSAT ground station software implemented in Japanese, and several presentations regarding Phase-3D. One of the Phase-3D presentations included a live demonstration of the prototype camera and electronics for the SCOPE project that will provide imaging capability aboard the satellite. Jim reports he was particularly impressed by the progress on SCOPE and the demonstration of the capabilities of the camera and electronics. Presenters included JA2PKI, JR1SWB, JM3MAJ, JA0FKM and JH7CKF. An award was presented to Sumio Nakane (JH3BJN) for achieving satellite DXCC using only a four element antenna for 2M, a most impressive accomplishment.

The evening prior to the Symposium, JAMSAT held a celebration of their 20th anniversary. Jim reports the hospitality was outstanding with great international camaraderie and a good deal of discussion about satellite construction and operation. Jim said he was particularly grateful for the hospitality and translation services of Sumio Nakane, Miki Nakayama, and Tak Okamoto.

AMSAT-NA congratulates JAMSAT on its 20th anniversary!

UNAMSAT Status Report

David Liberman (XE1TU) project manager for UNAMSAT at the Autonomous University of Mexico, is resting at home recovering from hepatitis. Meanwhile according to Hector Sosa, chief software engineer for UNAMSAT, the entire student group that has been working on the construction project of their UNAMSAT-1 MICROSAT for about two years, recently obtained their ham tickets after they all took the exam for their amateur radio licenses and have now received their call-signs. The new licensees are:

Jose Garcia XE0IKQ
Juan Zavala XE0MMF
Hector Rojas XE0LFD
Gabriel Garcia Gama XE0JMC
Saul de la Rosa Nieves XE0RAI
Eloy Martinez XE0IKZ
Carlos Wallenius XE0JPM

Those who might want to wish XE1TU a speedy recover may send cards to:

AMSAT-UK Colloquim Call For Papers

The ninth AMSAT-UK Colloquium will be held July 28-31 at the University of Surrey in Guildford, Surrey, England. This year's colloquium will be divided into four primary topic areas: spacecraft engineering, future space missions, groundstation and spacecraft operations and associated amateur space activities. Papers falling into these categories are sought for the event. Authors should submit abstracts to arrive no later than May 10, 1994 for consideration for this year's event with full paper submissions due by June 10, 1994. Authors will be notified of paper acceptance by June 1. Abstracts should be sent to:

Doug Loughmiller, G0SYX
AMSAT-UK Colloquium Programme Chairman
University of Surrey
Centre for Satellite Engineering Research
Guildford, Surrey
GU2 5XH

England

Submissions can also be made to the program chairman via fax on +44 0483 259503 or via the Internet to: D.loughmiller@ee.surrey.ac.uk

Abstracts and papers should only be sent to the addresses listed above.

The annual AMSAT-UK Colloquium is the largest international gathering of amateur satellite enthusiasts and experts in the world and has established a high standard of quality presentations on topics relevant to the amateur satellite community. Organiser's of this year's event would welcome all contributions of program material covering the vast scope of the amateur satellite program as it exists in 1994. The ninth AMSAT-UK Colloquium promises to be the most informative and entertaining event yet. We look forward to your participation in this year's Colloquium. See you in Surrey!

AO-13 OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 113.04 FROM AMSAT HQ
SILVER SPRING, MD APRIL 24, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-113.04

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS
30-Apr-94 2130 B 176 W9ODI VE2LVC
09-May-94 0000 B 175 W5IU WA5ZIB
14-May-94 1700 B 167 WA5ZIB W5IU
21-May-94 2130 B 185 VE2LVC W9ODI

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. If neither of the Net Control Stations show up, any participant is invited to act as the NCS.

Slow Scanners are invited to join the SSTV sessions on AO-13. The frequency is 145.955 MHz. The net meets at 45 minutes before Mode S, and on Mode B following Mode S on Saturdays and Sundays. Join those sessions or convey your wishes for other SSTV skeds to wb6llo@amsat.org, and he will coordinate your efforts.

AMSAT BOOTH AT DAYTON

HR AMSAT NEWS SERVICE BULLETIN 113.05 FROM AMSAT HQ
SILVER SPRING, MD APRIL 24, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-113.05

Look For The AMSAT Booth At The Dayton Hamvention Next Weekend

For those of you who are going to be at Dayton, we look forward to seeing you. The AMSAT booth is in the same spot as last year, 445 - 448.

AMSAT will be holding three sessions during the weekend. On Friday at 1:00 PM in Room 1, "Getting Stated on the Satellites, Including the Packet Birds." This will be moderated by Keith Baker KB1SF. There are two sessions on Saturday, both in Room 5. AT 1:00 PM the SAREX session features several astronauts plus Roy Neal (K6DUE). And at 3:15 PM, learn all about the progress on Phase 3D from Dick Jansson WD4FAB, our VP for Engineering. Dick is working very closely with all the various individuals and groups participating in the construction of the satellite and will bring us up to date on how everything is going.

This being the 10th anniversary of the first "Ham in Space" and the 25th anniversary of the founding of AMSAT, this is a very big year for us. Try to participate in as many of the AMSAT-related functions as you can.

We will be holding an informal dinner and get-together Friday evening. Come by the booth after the Hamvention opens Friday noon and sign up. The restaurant can accommodate only those who sign up.

Communications

The Upper Valley Radio Club in Fairborn has graciously invited us to use their two repeaters while we are in the area. The 2 meter one is on 145.41 (-) and the 70 cm machine is on 442.375 (+). Both are located on a water tower not more than a half mile from the Homewood Suites, where many AMSATers are staying. So, handi-talkies on low power ought to work nicely in that area.

Of course, DARA will run their usual talk-in on 146.94 (-). If you can get through the mob, they do a good job of providing directions.

Around the Hara Arena, and at other locations where we need to communicate :via simplex, AMSAT will use 145.55. I am sure that it won't be clear, but no 2 meter frequency is clear during Hamvention. For those with 70 cm HTs, I suggest 438.00. Mine seems to work there.

I understand from Keith Baker KB1SF, who lives in the Dayton area, that road construction in and around Dayton is particularly troublesome this year. I-75 is reported to be torn up, and down to one lane; BOTH north and south of Needmore Road (the main way to the arena). Also, I-675 north and south are torn up, and down to one lane, in spots. This is the route from I-70 down to the Hoomwood Suites in Fairborn, where most of us will be staying. So, wherever you're going around Dayton, give yourself plenty of time.

Travel safely and we'll see you next week!

73,

Bill Tynan (W3XO)
AMSAT-NA President

Mode-BS : MA 230 to MA 250 | Blon/Blat 230/-5
Mode-B : MA 250 to MA 256 |
Omnis : MA 250 to MA 120 | Move to attitude 180/0, Jul 11
[G3RUH/DB2OS/VK5AGR]

FO-20: The following is the current schedule for transponder operations:
ANALOG MODE:
20-Apr-94 7:35 -to- 27-Apr-94 7:55 UTC
11-May-94 6:54 -to- 18-May-94 7:20 UTC
Digital mode: Unless otherwise noted above.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

KO-23: Working well. [WH6I]

KO-25: Working well. WH6I reported in last week's KO-25 status report that number of new images can be found on KO-25 but since the wide angle images are in a new format that so far has not been decoded. Well since then he reports that the QUIKDISP.EXE is available on KO-25's BBS for downloading. This is a program that will display the new wide angle views from KO-25. WH6I is in the processing downloading several earth image files. He says that the file KAIW0008 appears to be on the adriatic coast of the former Yugoslavia. [WH6I]

AO-16: Working well. [WH6I]

DO-17: ZR5JRS finds this to be an excellent satellite to monitor as he can receives DOVE with 599 signals when it is at an elevation of only 7 degrees. To date, however, he has not heard the digital voice. [ZRTJRS]

UO-11: This satellite is working well with clear, readable RTTY. The digital voice also is received well from ZR5JRS's QTH. ZR5JRS observes that he has to wait until UO-11 is at lest 25 degrees

above the horizon for him to receive a good copy on UO-11. He notes that this is in contrast to the other OSCAR satellites which he copies almost immediately after they rise above his horizon. His only theory about this is that perhaps UO-11 runs considerably less power than the other OSCARs. [ZR5JRS]

MIR: Over the last 4 days, the MIR BBS has been switched off. This is possibly to prevent clashes with the STS-59 SAREX mission. However, before this, it was relatively easy to access the MIR BBS even using 2 watts of power at an elevation of 18 degrees with a "Slim Jim" antenna. There have been no reports of voice contacts in South Africa that ZS5JRS is aware of over the last 14 months.
[ZR5JRS @ ZR5GQ.NTL.ZAF.AF]

RS-10/11: Of all the OSCAR satellites, this satellite is ZR5JRS's favorite one to work. His station consists of a 10W Yaesu FT-480R with a "Slim Jim" antenna for the uplink, and an old Yaesu FTDX 400 with a long wire antenna for the downlink. From his QTH in Durban, grid square KG59MG, he can work stations in Cape Town, which is about 1300 KM away and stations Johannesburg which is about 500 KM away at the same time for about 3 to 4 minutes. JR5JRS has also found that the downlink is about half as strong as the beacon signal. He also uses the beacon signal to gauge cond-itions on the 10M band, sometimes hearing the beacon up to 10 minutes after the satellite has gone below the horizon!
[ZR5JRS @ ZR5GQ.NTL.ZAF.AF]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

[871]
The following is a QST

Can a new Fairness Doctrine impact on ham radio and will the ARRL get its way on vanity call signs? Find out on Newsline report number 871!

(*****
HAM RADIO AND THE FAIRNESS DOCTRINE

Bowing to extensive White House demands, congress is again pressuring the FCC to reinstate the "fairness doctrine" and to expand it past its original intent. Because of the latter some hams want Amateur Radio discussion groups included. Heres the story.

The fairness doctrine was an FCC regulation repealed in 1987 which required broadcasters to air both sides of a controversial issue. According to a report in the trade publication Daily Variety, a Federal Communications Commission staffer confirmed the agency is getting "heat" from Capitol Hill on the issue, although the aide would not identify the lawmakers involved. Radio - Television News Directors Association president David Bartlett asserts that the pressure is coming from Rep. John Dingell. Dinghall is the powerful Democratic chairman of the House Energy and Commerce Committee and is believed to be acting in concert with the president and his staff.

Not reported in Variety is a strange Amateur Radio connection in all of this. It now seems that several hams involved in long running 75 and 20 meter debate net activities believe it is important to include on-the-air amateur Radio discussions under the terms of any new Fairness Doctrine. Anyone listening above 3850 KHz or 14.300 MHz is already aware that this small but vocal group of hams feel that they have a constitutional right to have their views on various issues known to all of Amateur Radio using their ham stations as a broadcast platform. Some are already believed to be lobbying their local congressional representatives for inclusion of private radio service communications in any new Fairness Doctrine legislation.

In 1987, the FCC under then-chairman Dennis Patrick repealed the fairness doctrine on grounds that it could no longer be justified in an era of cable TV and other burgeoning media outlets. A congressional effort to codify the regulation died when proponents failed to muster enough votes to override President Reagan's veto.

Most congressional observers expected Congress would easily reinstate the rule following the election of President Clinton in 1992. But the effort died last year after Rush Limbaugh and other radio talk show hosts engineered a well-organized effort to kill the proposal. If the Fairness Doctrine is ever reinstated, the inclusion of Amateur Radio and other personal communications services is doubtful because none fall under the purview of any broadcast related FCC rules. But that does not seem to be enough of a reason to convince proponents of including ham radio communications in a new Fairness Doctrine from trying. Stay tuned. This one is not over yet.

(*****
FELDMAN RESPONSE

Over the past several weeks Newsline has reported on legal action by Southern California's Claremont Amateur Radio Association to bar several radio amateurs from the clubs repeaters. One of the people who was the target of a CLARA restraining order is Drew Feldman, N3KSO. Newsline had the opportunity to talk to Feldman to get his perspective on the legal action taken against him. The comments that follow express Feldman's point of view.
Interestingly Feldman is not as upset with the Clarmont Amateur Radio Club as he is with the attorney that is representing the organization, Sid Radus, N6OMS.

"The first order of business of Southern California's Repeater Coordinating Committee was to close a repeater that had been coordinated open going on two decades. The repeater, high level, blanketing most of southern California with great coverage was originally coordinated properly open. But with no consideration for its large user group, its own rules, the FCC guidelines, no notice of this action was taken by Sid Radus, the new TASMA President. This is the same Sidney Radus that brought hams to court in an attempt to control the user group of the very same machine. A conflict of interest is obvious. I'm one of two amateurs that as of late has been caught up in this mess. There have been three cases prior, and I know of two more scheduled in the near future." Drew Feldman, N3KSO.

Obviously Feldman's point of view differs from that of the Claremont Amateur Radio Club and is members. He is aware of the mistake made by the court in accepting an older version of section 97.113 in denying a change of venue request. Its now up to him and Anthony Cardines, WA6IGJ to go forward with any appeal.
A more in-depth interview with N3KSO has been conducted by RAIN Producer Hap Holly, KC9RP. That report will be on the RAIN Dial-Up in a few weeks.

(*****
CANADIAN AMATEUR RADIO REALIGNMENT

What would you say if you learned that the FCC was going to delegate the overall administration of the United States Amateur Radio Service to the American Radio Relay League, the National Amateur Radio Association or maybe even Sears Roebuck? You would probably be more than a bit shocked. So imagine the way hams in Canada must be feeling after learning that the Canadian government and the national society Radio Amateurs Canada have formed a working group aimed at turning the administration of the Canadian Amateur Radio Service over to the national society.
According to Fred Maia's W5YI Report, if the details are worked out and approved by Parliament, Radio Amateurs in Canada could wind up managing the certification and documentation of all

aspects of the service, the examination and licensing of all applicants for ham radio licenses and overall control of the Amateur Radio spectrum within Canada and its possessions. In fact, word out of Ottawa is that the government is even considering delegating every aspect of the Canadian Amateur Radio service to Radio Amateurs of Canada. This would give the RAC wide ranging pseudo government powers to maintain examination questions, approve amateur service examiners, issue call signs and perform Amateur Radio spectrum surveillance to assure that all Canadian hams were abiding by the service rules. Such an agreement would also give the Radio Amateurs of Canada exclusivity in the publishing and distribution of all documents related to the Canadian Amateur Radio service.
The working group is expected to take at least a year before it arrives at any definitive agreement. If an accord can be reached it could set an example that other nations may emulate, worldwide.

(*****
ARRL DEVELOPS VANITY CALL PROPOSAL

The ARRL's Executive Committee has approved the recommendations of the Ad Hoc Committee on Preferred Call Signs in preparation for the ARRL's filing of formal comments in PR Docket 93-305, the FCC's Vanity call sign proposal.
The committee report says that all amateurs should be eligible for participation in the program. A phase-in period and priority system of what the League calls gates should be adopted to allow the Commission relief from the administrative burden expected from the heavy initial submission of applications, and to afford licensees the opportunity to regain lost call signs. Included in the first gate would be those who wish to obtain the call sign of a direct family member. Clubs with lapsed club licenses and call signs should be allowed to recoup those call signs in the first priority group. The second gate in the priority system would be opened to Extra Class licensees; a priority third gate would be opened to Advanced Class licensees. The League says it will also recommend that one by one prefix call signs be made available for limited duration special events that are of national significance.
The April 6th recommendations were based on membership input solicited by the committee. A copy of the committee's complete report is available for an SASE from the Regulatory Information Branch at League Headquarters, and on electronic services including CompuServe, America On Line, Prodigy, and the ARRL Bulletin Board.

(*****
ARRL SEEKS CLUB CALL SIGN RULING

The ARRL has also petitioned the FCC to increase the minimum number of members necessary for granting a club station license

from two to four. The League says that the FCC's 1993 notice of proposed rule making to reinstitute club licensing makes this a timely issue.
In 1990, the League, as part of a petition for rule making seeking miscellaneous changes in the Amateur Service Rules, proposed the same change. At the time, no club station licenses were being issued, but the League said that if that program was resumed, the two-person criteria would invite applications from parties that are not clubs, such as two or three licensees simply wanting an alternative call sign.
The League believes that the two-person criterion is insufficient to distinguish bona fide clubs from two or three individuals who do not function as a normal Amateur Radio club. By way of example league says that of 1,957 Amateur Radio clubs that are ARRL-affiliated, only 10 have fewer than four members. Until 1976, the FCC required an application for a club station license to file copies of the club's constitution and bylaws, which helped ensure that the club was bona fide. But the FCC has not issued club station licenses since 1979. So the commission declined to change the criteria, since new club licenses were not being issued.
The Leagues request has designated as RM-8462.

(*****
ARRL BEGINS LICENSE RENEWAL SERVICE

The ARRL has now begun mailing amateur radio license expiration notices to its members. The notices, including an envelope addressed to the FCC's processing facility in Gettysburg, PA, are sent 90 days before the license expiration date and are generated from the official FCC database. All addresses are being cross checked with the ARRL membership database and the QST magazine mailing address is used if it is different from the address in the FCC database. This the League says is being done for both accuracy and to insure prompt delivery.

(*****
SHACK AND THE HAMVENTION

Now for an update on next weeks Dayton Hamvention starting with word that Radio Shack for the first time ever it is recognizing this very popular ham radio event. An advertisement page 22 of the latest Radio Shack flyer heralds a banner proclaiming "Dayton Hamvention Ham Convention Specials." It also invites readers to --and we quote -- "Plan to visit the worlds largest and most famous Ham gathering, the Dayton Hamvention with its Giant Flea market, exhibits and activities for the family taking place April 29, 30 and May 1 at the HARA Arena, Dayton Ohio." Radio Shack also offers their popular 2 meter and 70 cm hand-held FM transceivers at substantial savings off their usual prices.

(*****
PACKET CLUSTER DESIGNER TO RECEIVE AWARD

One ham who is definitely going to be at next weeks Dayton Hamvention is Dick Newell, AK1A. Newell and his Packet Cluster software have become a staple on the VHF and UHF bands worldwide. As a result Newell is the winner of this years Dayton Amateur Radio Associations Technical Achievement Award.
Mr. Newell is being recognized for his efforts in amateur radio through the creation of the packet cluster concept. As well as the software that supports it. AK1A first started working on the packet cluster concept in 1986.

"I designed the protocol to talk, to hook these computers up together. They exchange information with each other and send what nodes that are connected to each station, which users are currently connected to the system. And then when somebody does an announcement or DX spot it gets distributed to each node. Then the node is responsible and the software sends it to all the users that are locally connected to that node." Dick Newell, AK1A.

Packet cluster has grown from just a small number of computers linked together.

"The number of amateurs that use packet cluster all the time is probably between 35,000 to 40,000 amateurs." Dick Newell, AK1A.

Mr Newell was humbled and surprised by the award.

"I was completely surprised, I had no idea that I was even being considered. I consider it a very big honor. That is all I can say. I was very surprised." Dick Newell, AK1A.

Dick Newell, AK1A will receive the 1994 Technical Excellence Award at the Grand Banquet to be held Saturday evening, April the 30th at the Dayton Convention Center located in downtown Dayton.

FM-RPT

"The World of FM and Repeaters" is a new monthly column by Newsline producer Bill Pasternak, WA6ITF premiering in the May issue of Worldradio News. According to Pasternak, he was enticed into writing the column after it was pointed out to him that no publication other than QST Magazine was devoting any regular page-space to the largest sub-group within the United States Amateur Radio service.
Pasternak says that the Worldradio FM and repeater column will not be a rehash of his old "Looking West" that ran 22 years in 73 Magazine. Instead Bill says that he will use the world-wide news gathering potential of Newsline to procure timely information that is vital to the day to day on-air operations of all FMers, repeater licensees, system owners and repeater users. The column will also solicit original articles and papers from prominent

FMers, repeater groups and frequency coordination councils. You can meet Bill at the Worldradio News booth at next weeks Dayton Hamvention. He will also be hosting two forum sessions at Hamvention '94 as well.

(*****
TONY ENGLAND, W0ORE TO SPEAK AT QCWA DINNER

Former NASA Astronaut Tony England, W0ORE, will be the keynote speaker at the Southwest Ohio QCWA dinner in Dayton, Ohio on Friday, April the 29th. The event also takes place Hamvention weekend at the Continental restaurant which is located about a half mile west of Interstate 75 on State Route 725. The dinner gathering begins at 7:30 PM.

(*****
RUSSIAN TIMES

The Russians are really taking to electronic mail in a big way. The March 9 New York Times notes in a story that Russians are taking to e-mail in a big way, some of them even being able to access the Internet. "We can use the Library of Congress in five minutes, while it takes a magazine from the US three months to reach Russia," a Russian scientist said.

(*****
DX

In DX, word that the Radio Society of Great Britain has scheduled its 1994 International HF and Islands on the Air Convention for October 7 to 9, 1994. Included this year is a 30th birthday party for IOTA. The convention will be held at the Beaumont Conference Centre in Old Windsor, Berkshire. More than a dozen speakers already have signed on, including Peter Casier, ON6TT, one of the 3Y0PI Peter I Island expedition operators, and Roger Western, G3SXW/ZD9SXW. For more information, contact E. N. Cheadle, G3NUG, Further Felden, Longcroft Lane, Felden, Hemel Hempstead, Herts HP3 0BN.

(*****
VANITY CALLS

When amateur radio operators get the go-ahead to request vanity callsigns... one radio club already has a particular call sign in mind. Members of wars -- West Alabama Amateur Radio Society, will ask the FCC to grant W4WYN as the club's new call sign. It's the Club's way of paying tribute to a special amateur radio operator: Don McDaniel. McDaniel was a driving force in amateur radio in Tuscaloosa, Alabama, for many years. He was a close friend of many wars members -- and was very active in public service. In fact, McDaniel was always one of the first to volunteer, any time emergencies arose. WARS members say having W4WYN as their club call sign would be a fitting tribute to Don McDaniel... an amateur

radio operator admired by all who knew him.

(*****

And for this week, that's all from the Amateur Radio Newsline.
You can write to us at Post Office Box 463, Pasadena, CA 91102.

Next week a full report on planned activities at Hamvention 94.
Please check it out.

The finals are not a *load*. The line is matched to the final's "load
line" which is a mathematical fiction used to describe the device's
output impedance. That impedance is simply E/I for the stage. It's
not a resistor. The transmitter is a source, not a sink. Consider a
fire hose, try spitting *into* an operating fire hose. How much of
your spit gets flung right back in your face?

>Does anyone know what is considered dangerous RF and Microwave signals.
>Somehow I remember that between 100K and 30GHz your not suppose to expose
>human's to more than 194V/meter (the spec could have been either an ANSI,
>IEEE, or OSHA spec).

Unfortunately I don't recall the precise spec, but there is a current ANSI limitation that is frequency selective, specified in both mW/cm2 and V/m. I believe it's ANSI C95.1 (1992). An article referring to same appeared in the last two years of the Proceedings of the IEEE (sorry for the precision, but I can't find the article in my pile of xeroxed stuff!)
The old OSHA standard was 194 V/m (which translates to 10mW/cm2 FAR FIELD), frequency independent. That spec was revised to correspond with the human bodies increased absorption of EMag between 300MHz and 3 GHz. In some cases (if memory serves) the new spec is 20 dB more stringent than the old.

>My question is: since the transmitter is matched to the line, why does
>the reflected energy coming from the antenna get reflected again at the
>transmitter? Why isn't it all (or mostly) absorbed in the finals?

Well it depends. The precise scenario you describe is correct (I believe)--if the final amp is really Z0 ohms output feeding a transmission line of z0 ohms characteristic impedance, then any reverse travelling wave sees no mismatch at that junction, and that power is absorbed by the amplifier and essentially converted to heat.
Which would explain why your fan on that solid-state rig runs harder when you're delivering into a crappy load :-)
If there is a tuner involved it's a different story. The tuner establishes a conjugate match at the amp/line junction, so there *is* a mismatch there. Reflected energy re-reflected from the amp/line junction, and any power not reflected is again dissipated in the amp as heat. The point of the conjugate match is to insure that the re-reflected voltage appears essentially in phase with the original incident voltage to maximize the power transfer.
The problem with using the tuner at the TX output is that the SWR of the line can cause additive heat losses in the coax beyond the nominal dB/100' specification. This occurs because at current peaks in the standing wave on the coax, there's more I2R loss. Although the SWR has to get pretty high (like 10:1) for this phenomenon to have much effect.

1150. [News] FCC Gets New Weapon

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-25 09:16:49 UTC
From: jherman@uhunix3.uhcc.Hawaii.Edu
Message-ID: <Cot5s1.G2v@news.Hawaii.Edu>
Source record: 267800

From the AP News Service

Original article title: FCC Gets New Weapon Vs. Pirates

WASHINGTON (AP) -- The radio police have a new weapon to fight pirates of the airways.

The Federal Communications Commission on Friday showed off a car equipped with two computers, a color printer and a satellite receiver in the trunk. Driven through cities and neighborhoods, it can detect unlicensed radio signals and signals that may cause interference.

``This will give us a lot of advantages against the bad guys, no doubt about it,'' FCC Chairman Reed Hundt said, standing next to a dusty blue Chevrolet Caprice parked on 20th Street.

By June the FCC will have 10 such cars, each installed with $75,000 worth of equipment. The commission would not say which of its 35 field offices, located in most major cities, will be the first to receive the cars.

The goal is to eventually give each field office at least two cars. How soon that happens, Hundt said, depends on Congress' appropriations to the agency.

The FCC finds about two or three pirated radio signals a month, ranging from people trying to operate low power FM radio stations to taxi cab dispatchers. Businesses and boat operators, however, are the biggest culprits, said commission spokesman Steve Svab.

Inside each car is a control station between the driver and passenger seats. It features a mobile phone, a computer keyboard and two small screens: one for computer commands and ther other for display maps and other information.

With the equipment, an FCC agent can pick up a radio signal, delve into a data base to find out if it is authorized and pinpoint the location of the transmitter, said Jim Higgins, an FCC engineer who helped design the system.

In addition, data can be transmitted from the car to a central location or from one car to another.

Right now, field agents can't do any of these things from a car and must rely on less sophisicated equipment inside their offices to track down unlicensed signals and interference problems, Svab said.

Pirates who are caught can be fined up to several thousand dollars a day.

1151. tcpip coordinator in TN?

I just built a copper j-pole out of 1/2" copper tubing. It works great (even if I say sio myself) :-)

Here are the diminsions I used, swr is well below 1.3 all across the band:

Reflector - 57.375"
Stub - 19.125"
Gap - 1.250"
Feedpoint - ~2.500"

The antenna was designed for 146.00MHz.

Good luck !

Bruce,N9WKE

Just a quick note here about the ACC-L mailing list...

It is hosted on gitvm1.gatech.edu (gitvm1.bitnet for those in both worlds).
If you have trouble getting to Mike's mirror on slic.cts.com then you can
send mail to listserv@gitvm1.gatech.edu. In the body of your mail message,
put "subscribe acc-l your-name". Replace "your-name" with the name you wish
to have appear on outbound messages from you. Please don't use psuedo names or
"handles" on the list.

As always, problems or questions can be sent to me (I am the list owner and
am responsible for it if it breaks (:) at the address(es) in my .sig.

The folks at ACC are subscribed to the list via their Compu$erve account, but
I have no idea how often they check for mail.

Enjoy,

Monte KC4GPW

>you're delivering into a crappy load :-)

Not true. Do not confuse the output impedance of a source with a
real resistor seen looking into that port. A transmitter is not a
load. Its output impedance is strictly a mathematical artifact of
its load line (aka dynamic "resistance") transformed by any output
matching network. The load line is simply E/I for the active device
output mesh. It does not represent a dissipative resistor.

Example: take an 8877 with 3,000 volts on the plate and 300 ma of
plate current. Its load line is 10,000 ohms, and that value is
transformed to the transmitter's actual load by a matching network
in its output circuit. But there is no 10,000 ohm resistor in the
circuit. The actual tube resistances are measured in milliohms,
primarily contact and element resistances. So there's no physical
"plate resistance" in the circuit to act as a dissipative load for
a wave coming in the output port. If there were, then the tube's
output would be dissipated in it too instead of being delivered
out of the port to the load.

What happens instead when an operating transmitter is terminated in a
load other than the one for which its output matching network is designed
is that the load presented does not equal the optimum load line of the

device, and the power transfer *efficiency* of the stage declines. This loss of efficiency in converting *DC to RF* then causes the stage to get hotter. It is *not* a result of reflected power being dissipated in the transmitter's output impedance (remember, watts can only be dissipated in real resistances, and they're *tiny* compared to the fictional load line "resistance" of the stage). The power heating the stage is coming from the *DC power supply*. With an *adjustable* matching network, this wouldn't occur since the ideal load line could again be matched to the real load impedance.

What happens to a current attempting to push its way into the output port of an active transmitter is that the current is overcome by the fresh current going out of the port. Note: currents can pass each other unimpeded *on a transmission line*. That's because there's no physical mechanism for them to combine destructively, IE no active device or physical resistor. That's not the case when the wave tries to enter an operating transmitter. Net current flow is always *out* of the output port of an active transmitter because the presence of a current trying to get in causes the load line of the device to dynamically shift and supply a corresponding cancelling current of the proper phase and magnitude. IE looking back into the output port of an active transmitter, the wave does *see* a match, but that's an artifact of the real physical processes going on. There's no real resistor turning the impinging wave into heat.

I like to use the analogy of trying to spit into a working fire hose. The spit doesn't pass unimpeded back to the pump, but the (tiny) backpressure it generates to the flow does propagate back to the pump. No water actually goes back into the pump to "dissipate". It all still goes *out* of the nozzle. Any heating of the pump is the result of the pump's motor having to work harder to overcome the backpressure. The heat comes from the power supply, not the spit.

>If there is a tuner involved it's a different story. The tuner establishes a
>conjugate match at the amp/line junction, so there *is* a mismatch there.

>match is to insure that the re-reflected voltage appears essentially in phase
>with the original incident voltage to maximize the power transfer.

This is not quite accurate either, though its a way to *model* what happens. (Models don't have to have physical reality in order to give useful results *within their limits*). The "tuner" is actually just an extension of the matching network in the transmitter. The behavior of the wave is exactly the same as in the case where the tuner is not present *except* that output stage *efficiency* is optimized when the tuner is properly adjusted, just as it would be if the internal stage matching network were adjusted instead. Conjugate matching is just another mathematical fiction that models an actual physical process, but *isn't* that physical process. It's a conceptual mistake to read too much physical meaning into

the equations of a model. It can lead to the erronous idea that operating voltages and currents in the output stage of a transmitter somehow mystically conjure a real dissipative resistor into being.

I think this explanation is kind of mixed up, or too simple, or something.
What about the current minimums, isn't the I2R loss there less than the matched
case? This "reflected power is converted to heat in the amplifier" thing bothers
me too. If I were an amplifier and the load didn't want all the power, I just
wouldn't generate as much power.

Indeed.

[flame on]

Karl, if you want to play net cop, do it in Email and make it clear you
speak only for yourself. Don't clutter the group with your cop postings.
SAREX missions are special events that deserve wider coverage than normal
orbital data postings, like those of TS Kelso, that appear periodically
in the space newsgroup. If that 600 liner starts appearing here, *I'll*
complain too, but in Email. I won't make a public nuisance of myself about
it on this group.

[flame off]

Hmmm, seems to me that P43WLP would be from Aruba. And that's a pretty long callsign for a station from Aruba. The prefix for Paraguay is "ZP."

Unfortunately, I know of no DX callsign server around. Maybe someone else will. Just figured I'd bring the callsign discrepancy to your attention.

Yes, in fact I know of at least one 202 that's taken a bit of a beating over its life, with zero problems. Nice little radio, with all of the bells and whistles, at a good price. You don't get wide-band receive. This is bad if you want it, but it's good if you want an interference-free radio.

Can anyone help me? I passed my test to become a no-code tech six months ago, and I haven't received my license yet. A couple month ago, I found out that the FCC lost all my paper work, so I had to send my paperwork in again. They said that they were going to put a rush on it and that it would only take four weeks.

I would greatly appreciate it if anyone could tell me why it takes so long to get a license. Also, if anyone could speed my license along would also be appreciated.

My name is Rich Crossler and I live in Moscow, Idaho. My friend who gave me the test was KA1POR. He has been trying to contact the ARRL to see if they can shed some light on the difficulties.

Thank you for your time.

Rich

I thought it was dielectric losses at the voltage maximums, which is why untuned dipoles matched with tuners work best with air spaced ladder lines. You can run a high swr between the tuner and dipole without the high losses coax would have in such a mismatched situation.

>Criminal act, give me a break.
>
Well Gil, I agree that this story has the potential to become an urban
legend, which is why I posted the synopses of the press coverage from last
year: to correct the errors from the original post. The fact is, it
happened. Yes, it would appear that the San Diego Sheriff had no legal
authority to confiscate the HT, but the department, with the aid of the
local FCC Field Engineer, did succeed in coercing Chris to "voluntarily"
donate his HT to the SD RACES rather than face prosecution. The last I
heard, the San Diego County Supervisors voted to decline the "gift",
although that part I have not been able to confirm. One thing that came out
last year when this story was fresh that I did not note in my earlier post
is that at about the same time as Chris used his HT on the Sheriff's
frequency to summon aid, another person was causing malicious interference
on Sheriff's frequencies. The word is that the two together greatly
irritated the Sheriff and drove the coercive activity that relieved Chris
of his HT.

Since I'm a little too far North to follow the San Diego papers, does
anyone from SD have the actual current status of this story?

: My question is: since the transmitter is matched to the line, why does
: the reflected energy coming from the antenna get reflected again at the
: transmitter? Why isn't it all (or mostly) absorbed in the finals?

Well, the transmitter is NOT generally matched to the line. Rather, the transmitter expects to see a particular load for proper operation, but it, in turn, does NOT represent a load of that impedance itself. Generally, it represents a much higher impedance, "looking back into it."

If you know the loss in your line under 1:1 SWR, you can calculate the additional loss due to higher SWR; there are formulas and nomographs for doing this. Usually they aren't _exact_ but they are pretty good, particularly if the line is an even number of half-waves long, or several half-waves long. This is because, as another followup noted, the loss is less in the area of current minima and more in the area of current maxima; if your line is less than 1/4 wave long and operating into a high impedance load, the loss may actually be less than under matched conditions.

On tuners: I'd like to offer two rather different ways to look at them, and perhaps the contrast between the two different viewpoints will help some understand what's going on. I'd like to stress the results are the same, and it's only different ways of looking at the same thing. First, and probably most common, is the idea that the tuner transforms one impedance to another. The load (antenna) impedance is reflected down the length of line as some particular load impedance presented at the input terminals to the line. This can be any line, any impedance, any loss in the line, any load-- it will present _some_ impedance at its input terminals. It's the job of the antenna tuner to transform this impedance (and perhaps provide a balanced--unbalanced transformation too) so that the transmitter "sees" the impedance it needs to operate properly. This view as an impedance transformer is a very reasonable one to take if you are designing the tuner: it tells you what part values to use, and gives you a way to evaluate various configurations for loss and peak voltages and currents.

The second viewpoint is that the job of the tuner is to combine any power from a reflected wave in the line (load) with the power from the transmitter, so that the combination of the two is all sent back down the line for

another chance at being absorbed by the load at the other end of the line. That means that the voltage and current at the feedpoint have to account for the wave coming back from the load, and the power of that wave and the power of the transmitter in a wave sent toward the load. The total voltage (and current) at the input to the line at any instant in time are the algebraic sums of the voltages (and currents) of the forward wave and the reflected wave. (In fact, this is true at all points along the line.) And the forward voltage/forward current = line Zo = reverse voltage/reverse current. If you work through that, of course, it will look exactly like you are feeding the impedance mentioned in the previous paragraph. (To be accurate, you have to account for losses in the tuner itself, of course; ideally, these should be small.)

If you have trouble thinking of the transmitter as having a source impedance much different than the impedance it likes to feed, consider the AC mains, or a battery. It's darned inefficient (not to mention dangerous) to load either with an impedance equal to the source impedance. It's quite normal to operate with a load impedance very much higher than the source impedance in these cases. Matching the load impedance to the (conjugate) source impedance delivers maximum power to the load, but does NOT maximize efficiency. You also learn in receivers and even audio amplifiers that matching the source to load does not generally result in best noise performance either.

>Ed Haymore | AA6EJ ed@byu.edu | Live long and prosper.

Hi Ed, I loved Gary's "spitting into a firehose" analogy and the 100%
theoretical reflection of reflected power is correct due to the
conjugate match at the antenna tuner. I measure 100w out of my
transmitter into my antenna tuner. I measure 150w forward power out
of my antenna tuner. Neglecting losses, that means that 50w is being
reflected and re-reflected so I am actually radiating 100w. The two
things that cause SWR not to matter is the near-100% re-reflection of
reflected power at the antenna tuner and near-lossless transmission
line. It leaves reflected power with but one choice... RADIATE!

: is why untuned dipoles matched with tuners work best with air spaced
: ladder lines. You can run a high swr between the tuner and dipole
: without the high losses coax would have in such a mismatched situation.

At HF, and generally up into VHF, almost all the loss in matched
coax of decent construction is in I^2*R loss in the conductors. Very
little is in dielectric loss. This remains true up to pretty
high voltage, and for long lines is really independent of the SWR:
the current at maxima increases by the same percentage as the
voltage at maxima, so the I^2*R loss increases by the same percentage
as the E^2*G loss. The I^2*R loss will dominate unless the line is
very short (less than 1/4 wave) and operating into a very high
impedance load.

The case mentioned can be explained by the fact that a 500 ohm load
fed by 50 ohm line reflects back about 5 ohms 1/4 wave back; the
current there is _very_ high by comparison with the current at the
load. On the other hand, if the line is 300 ohms, then it reflects
back as about 180 ohms, representing much less current. In fact,
neglecting radiative loss (and dielectric loss), the wider you
space a given pair of conductors, the lower the line loss, even
if the line becomes higher impedance than the load. That's because
the squared current integrated along the length of the line is
lower...the current is a max at the load, if the load is lower
impedance than the line.

Hello everyone:
I recently obtained by FTP the instructions for making a 2m
J-Pole antenna from 300 ohm cable. It said that this ant should also work
on 70 cm. Does anyone have experience doing this? or is it much better to
make a J-Pole specially for 70 cm?
Thanks in advance for your comments.

73 & DX de Guillermo, XE1RGL

Stop at the AMSAT booth.

In general, go to everything EARLY!! Parking is normally a b**ch
and to make it worse, there's a lot of highway repair projects
underway now.

Don't waste time carrying an HT. Everything below 23 cm will be
wall-to-wall QRM. On 2m average HT range is about 3 feet. :-)

SYNOPSIS OF ACTIVITY

Solar activity was very low. New Region 7706 (N07W75)
produced the only observed optical flare during the past day, a
SF without significant x-ray output at 24/1213Z.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was quiet to unsettled.

Geophysical activity forecast: the geomagnetic field is
expected to be quiet to unsettled.

Event probabilities 25 apr-27 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 25 apr-27 apr

A. Middle Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 15/15/15
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
No changes are expected over the next 72 hours, through 27
April inclusive.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

That's fine, and if he had used that argument, I would have no complaint.
What I object to is the argument that if a technology is not state-of-the-
art then it must be no good.

My favorite horrible example of the overuse of technology is the
microprocessor-controlled battery charger that appeared in QST a couple
years ago. It wasn't doing anything that you couldn't do with a quad
op amp and a handful of other parts, but it sure was "modern"!

Phonetic Alphabets (Alpha Bravo etc)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets and spelling alphabets. This collection
currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian,
Rumantsch, Slovak, Polish, Hungarian, Swedish,
Finnish, Russian and Chinese.

This posting supersedes the one of 28th February.

My thanks to the many contributors, not all of whom are
acknowledged below.

I can make no guarantee of accuracy of this information;
indeed please send me any corrections or additions.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
25 April 1994

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by
the International Civil Aviation Organization and the FAA.
The International Telecommunication Union Phonetics list
has: Alfa, Juliette, Oscar/Oskar, Victor/Viktor.
Dates from about 1956.
UK police use Indigo instead of India (?)]

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert

Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found in Swedish, Dutch, Hungarian telephone directories.
A Swiss directory has: Andrew Charlie Lussy Queenie Sugar]

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich]

Used by New York Police Department:

Adam Boy Charlie David Eddie Frank George Henry Ida John
King Larry Mary Nancy O.. Peter Queen Robert Sam Thomas
Union Victor William X-ray Yankee Zebra

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala etc]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Allied Services 1945:

Able Baker Charlie Dog Edward Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tape Uncle Victor
William X-ray Yoke Zebra

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king
love mike nan oboe peter queen roger sugar tare uncle victor
william x-ray yoke zebra

[The same alphabet is described as "Used by Armed services of
USA & GB" in the ARRL 1945 Handbook. Entries cited in variants
of this alphabet: affirm, cast, hypo, inter, negat, option,
over, prep]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

Source record: 267881

I recently tested a number of DOS and Windows based 232 packages.. Lan Link is about the best for packet and has alot of features for HF. a little hard at first and then pretty good.

I don't get into all the fancy packet stuff and operate mainly HF modes and check the bbs and such on 2 meter.. found Acuterm the best and by far the easiest to use.. nice simple log, autocq and such (computer control of rig).

1186. Amplifier impedance (was SWR & Powre Loss)

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-25 18:56:59 UTC
From: tomb@lsid.hp.com
Message-ID: <CotwMz.AsG@hpcvsnz.cv.hp.com>
Source record: 267823

Sometimes it's fun to post little food-for-thought questions.

Suppose I have a 100W power amplifier that uses something like
beam power tubes in its output stage. Suppose in addition it's
being operated in a linear manner (so that superposition holds).
Suppose also that any output matching circuit it contains is
built from very high unloaded Q components--essentailly lossless.
If I "look back into" the output terminals of this amplifier,
I will "see" some real impedance, which I expect to be quite
different than the load impedance that this amplifier is
designed to operate into. Suppose I connect a generator
to the output connector of the amplifier and adjust the generator
to deliver 1 watt into the impedance I "see" looking back into
the amplifier.

Exactly where do you expect that 1 watt to be dissipated?
Why? What effect will you see on the meters monitoring the
power supply voltage and current of the amplifier?

Since I'm assuming superposition holds, it won't matter
if the amplifier is delivering power itself or not. You may
assume that the generator represents the expected load to
the amplifier.

Ed Haymore (haymoree@newt.ee.byu.edu) wrote:

: My question is: since the transmitter is matched to the line, why does
: the reflected energy coming from the antenna get reflected again at the
: transmitter? Why isn't it all (or mostly) absorbed in the finals?

Several people have posted complicated answers to the above, but there's
a simpler way of looking at it.

All you need to know is: what is the impedance looking into the feedline
at the transmitter output? If it is 50 ohms, resistive, then the
transmitter will be "happy" and put out its rated power. So long as
the feedline loss (and tuner loss, if used) is negligible, all of that
power will end up being radiated by the antenna.

If the antenna SWR is not 1:1, then that impedance will not be 50 ohms.
If you use a tuner and adjust for 1:1 SWR at the transmitter, than again
the transmitter will be "happy" and you will get full power radiated by
the antenna (less any loss in the tuner.)

You don't need to think about reflections to get the right answer.
Just consider impedance.

If you have high SWR and don't use a tuner, then you probably won't get
full power out of the transmitter, since it was designed for a 50-ohm
load impedance. In fact, most modern solid-state transmitters have
a power-shutdown circuit to protect the power amplifier from high SWR.
Old-fashioned tube-type transmitters, however, have a built-in "antenna
tuner" that allows them to work well with SWR's up to around 2:1 or so.

>This is the first time I'll be attending the HamVention (had my ticket one
>year) and I'm hoping all the experts can give me a leg up on do's and
>don'ts to make the most of the trip. I'll be attending Thur - Sun.
>I'd really appreciate any suggestions! I'm looking into satellite work
>if that would make any difference.

1) wear comfortable clothes - especially shoes and socks.. you will
be on your feet a lot if you want to browse the whole flea market.

2) travel light...don't buy anything you won't want to carry around
with you if you won't want to go right back to the hotel room
right away with it...

3) consider a backpack or over the shoulder bag if you plan to pick up
lots of literature (gets heavy) or small parts and equipment.
throw in a mechanical pencil or a pen and a small notebook so you
can take notes and record where you saw something so you can find
it again later if need be.

4) if doing 3, consider including a lunch and maybe a thermos of
favorite drink or beverage (calamari or squid, pasta or noodles,
marinara or red sauce...egad they're all the same! this cuts the
menu in half!)...avoid the lines at the food counters (at smaller
shows this also usually avoids what is unfortunately lousy food).

5) if you're not in a group, you might want to leave the radio home.
or locked up in the car.

it's something else to drag along...and in the RF Fields of
Biblical Proportions that happen at Dayton, a lot of radios aren't
all that useful...there is no unused channel there, it would seem.

6) It's ok to take rest breaks. If possible don't go where the crowd
goes (similar rules for Disney World apply).

7) if you can, stick around for the clean up drawings on Sunday.

that's a start. if you are looking for used gear we get into things like
bringing a portable VOM and checking DC continuity of switches and making sure
that controls actually adjust something and all that...

73, bill wb9ivr

(see also the article from a few years ago in an April "73" called the Hamfest
Survival Guide...i want to say 1989 but it was definitely the April issue -
definitely April - definitely...)

Wear very comfortable shoes.
Be prepared for cold and windy to hot and muggy weather.
It will be very crowded, be patient.
If your looking for something in the flea market go there early.
Haggle the price of most everything (new or used).
9 A.M. forums are no fun if you stay up till 2 A.M.
You always stay up till 2 A.M. :-)
Get to popular forums early to get a seat :-(
Enjoy and be prepared for sensory overload.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 25 APRIL AND FORECAST UP TO 28 APRIL

IPS Warning 12 will be issued later today for expected
recurrent disturbance commencing April 28/29.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 083/024

1B. SOLAR FORECAST
26 April 27 April 28 April
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 081/022

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 24 April
Learmonth 07 3232 1111
Fredericksburg 06 08
Planetary 07 08

Observed Kp for 24 April: 2233 2212

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
26 Apr 10 Quiet to unsettled.
27 Apr 10 Quiet to unsettled.
28 Apr 20 Unsettled to active.

2C. MAGNETIC COMMENT
Recurrent geomagnetic activity expected to commence late on
the 28th. The southern coronal hole which seems to be the cause
of this lengthy activity is rounding the east limb of the Sun. Active

to minor storm periods are expected 29 April - 1 May, with active
periods up to 11 May.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Apr normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Apr normal normal fair
27 Apr normal normal fair
28 Apr normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
Conditions expected to remain normal until April 28. Conditions
at high latitudes are expected to detriorate after local night
on the 28th.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 25 April: 47

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
26 Apr 45 Near predicted monthly values.
27 Apr 45 Near predicted monthly values.
28 Apr 45 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Degraded HF comms conditions expected after April 28.

Bill - I posted this a couple of months ago. This is the last I've seen in the
local paper.

This was the lead article in Tom Blair's column in the February 17, 1994 edition of the San Diego Union-Tribune.

"In a new bit of tension between the Board of Supervisors and Sheriff Jim Roache, the board refused Tuesday to accept a gift to the Sheriff's Dept. and told the sheriff to return it. The gift: a portable ham radio used last August by a back-country bicyclist, Chris Boyer, to summon help for a seriously injured friend. After sheriff's deputies responded to the emergency call, they told Boyer he had violated FCC rules by using restricted emergency frequencies and ordered him to surrender the improperly altered radio to them and the FCC. To avoid further hassle, Boyer signed the radio over to the department as a gift. But the supervisors, who honored Boyer in December as a good Samaritan, said no thanks this week. They urged the sheriff to return the radio to Boyer."

1198. Re: What are the dimensions for a 2m J-pole?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-26 01:32:54 UTC
From: ez045506@dale.ucdavis.edu
Message-ID: <CouEyu.1Fr@ucdavis.edu>
Source record: 267942

Thanks for every one's help. My 2m J-pole is working great now!
For your information, the dimensions I finally wound up with are
as follows:

Long side: 61-3/8 inches (measured from end to tube center)
Short side: 20-5/8 inches (ditto)
Gap: 3-1/16 inches (measured from tube center to tube center)
Feedpoint: 3-1/2 inches (measured from tube center)

SWR results:

144.010MHz 1.4
146.000MHz 1.2
147.000MHz 1.1
147.990MHz 1.3

Thanks again for all the help.

Timothy tjmcnulty@ucdavis.edu N6HFS

1199. Re: Luck Hurder ... gone:(Why?

In article <01HB9U9AAQFE000B36@mr.mec.mass.edu> FISHERB@a1.mec.mass.EDU (Burt Fisher, Cape Cod Reg Tech 508-432-4500 Ext.226) forwards:
> Luck Hurder - KY1T, Deputy Manager for the ARRL's Field Services
> Department, was dismissed, this week, by the ARRL management over a
> newly enacted policy issue.

Perhaps we should read the "Subject:" line again and ask "why" instead of simply crying "foul."

Typically when someone is "dismissed . . . over a newly enacted policy issue" it is because they refused to abide by the new policy. Why doesn't the writer of this message state what that policy is?

> In my view, the handling of this matter by the ARRL was unfortunate for
> all amateur radio operators.

"This matter"? What matter? What policy?

> that the ARRL understands our displeasure with their actions on this
> issue,

"This issue"? What issue? What matter? What policy?

> I personally have known and worked with Luck for many years

Perhaps this has something to do with it.

> If you believe that this action was not in the best interest of our
> hobby, then I encourage you to contact your respective Division
> Director, listed on Page 8 of QST or Dave Sumner-K1ZZ, ARRL Executive
> Vice President, 225 Main Street, Newington, CT 06111.

Luck Hurder could be a very helpful, hardworking guy. He also had an "attitude" a mile wide that could turn people off. I suggest we find out what the actual issues were before we all rush into the streets to storm the castle.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Hi Clark

<Anybody know when the Rochester (used to br Dearfield), New
<Hampshire hamfest is going to be?????

The Hosstraders fest is set for Fri May 6th and Sat May 7th.
It opens at 9AM for $20 per person. After 3PM the rate drops to
^^^ ^^^^^^^^^^^^^^ ^^^
$5 per person. You will not be admitted prior to 9AM.
^^^^^^^^^^^^

The Hosstraders hamfest will be at the Rochester NH Fairgrounds
located off Rt 16 exit 13. Take 202 east from rt 16 the FG is about
2 blocks south of rt 202.

As a reminder both Ham and Commercial Radio Exams will be given
on Saturday afternoon.

1202. 2m Backpacking Antennas

Date: 1994-04-26 05:33:40 UTC
From: Gary_Thorburn@UB.COM
Message-ID: <9404261238.AA1090@smtp.UB.com>
Source record: 267894

Has anyone built the "one pounder" Log-periodic 2m antenna
described in the 1994 ARRL Handbook ...

Or the 2m portable yagi described in "Radio Fun" this month ...

Or some other easy-to-carry 2m HT antenna they swear by?

Its springtime, I've dusted off my hiking/camping gear, and
I'm ready to go walking with my radio and I want to make
a new antenna to field test.

I now use a homebrew wire j-pole ("j-wire") which
works well and is only a few ounces. I'll supply
dimensions and other details on request to my
e-mail address below.

Tell me about what YOU use !

Jim -
One thought I have is to call your regional office of Motorola Comm. & Electronics, or call 1-800-555-1212 and ask for Radius or Motorola. They offer about what you're looking for in a little two to four watt job about the size of a credit card and about an inch or two deep. R-NET or something like that. If i still worked at a MSS I'd be able to get you more, but this should be a good start.

73,
Chuk Gleason,

dfarquharson@pattie.wellesley.edu (DOUG) writes:

Doug.... we have an active SkyWarn program here in Eastern Massachusetts! We meet when activated on the Waltham 146.64 MHz repeater.

In the past we have a representative at Logan and then have a NCS located outside of the NWS facility. The ham at NWS-Logan would monitor the traffic, while the NCS conducted the operation.

With the move away from Logan to a new doppler radar site in Taunton... we will be experiencing some changes this year. Several of us will be meeting in Taunton tomorrow afternoon to discuss the nitty-gritty and make sure we have smooth transistion. All of our equipment has been moved out of the NWS-Logan office to Taunton and installed... new NCSs and on-site hams are being trained.

Stay tuned.

HAMFEST CALENDAR 1994 - NORTHERN ILLINOIS
last updated April 26, 1994

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@ihlpf.att.com.

APRIL

April 29, 30, and May 1: Dayton, OH - Dayton HamVention. Hara Arena, Information, General: (513) 276-6930, Flea Market: (513) 276-6932 (Reservations not accepted by phone). Write: Hamvention, Box 964, Dayton, OH 45401-0964.

Advance Registration: Checks in $US, payable to Dayton Hamvention. Send name, address, call, and day and evening phone numbers. Enclose separate checks for admission and Flea Market.

Be sure to indicate either: Send admission tickets ONLY if flea market space assigned. Send admission tickets REGARDLESS of space assignment. Admission: $11.00 per person ($14.00 at door, good all 3 days). Banquet: $22.00 per person ($24.00 at door, if available). Send to: Dayton Hamvention, Box 1446, Dayton, OH 45401-1446.

MAY

May 1, Sunday: Sandwich, IL - DeKalb Hamfest, Kishwaukee ARC. Admission $5. Sandwich Fairgrounds, Suydam and Getty Roads, Sandwich, IL. For info, contact KARC, PO Box 264, Sycamore, IL 60178.

May 22, Sunday: Wheaton, IL - GMRS of Illinois May Fest '94. Admission $5. Starts 8 AM. Setup 6 AM. Info, call (708)690-1492.

May 29, Sunday: Chicago - Chicago ARC. DeVry Institute, 3300 N. Campbell. Starts 8 AM. Setup 6 AM. Admission $4. Kids under 12 free. Talk-in 147.255, 444.825. Info, (312)666-1606 or (312)545-3622.

JUNE

June 5, Sunday: Princeton, IL - Starved Rock Radio Club. Bureau County Fairgrounds. Admission $5. Talk-in 146.355/955. Info, Bruce Burton, KU9A (815)795-2201.

June 12, Sunday: Willow Springs, IL 6 Meter Club Ham-fest, Six Meter Club of Chicago. Santa Fe Speedway, 91st Street and Wolf Road. Admission $5. Gates open 6AM. Talk-in on 146.52 simplex or 146.97 repeater. Info, call Joe Gutwein, WA9RIJ, at (708)963-4922.

JULY

July 24, Sunday: Stickney, IL - DuPage ARC hamfest, Hawthorne Race Course, 3500 South Cicero Ave. Handicap accessible. Starts at 6 AM. Talk in on 142.25 MHz with 107.2 PL. (-600). VE Testing 9 - 12. Advance tickets are $4.00, $5.00 at the door.

This hamfest used to be held at the American Legion in Downers Grove and was a good small to medium-sized ham-fest. This year, there will be a 30,000 square foot indoor exhibit area in an air conditioned building, plus outdoor tailgating.

For advance tickets, send check payable to DARC, enclose SASE, and send to Hamfest 94, 7511 Walnut Ave, Woodridge, IL 60517. For commercial or fleamarket tables info, call 708-985-9256.

SEPTEMBER

September 11, Sunday: Joliet, IL - Bolingbrook ARS Ham/Computerfest, Inwood Recreation Center, 3000 W. Jefferson. This is a medium size hamfest with indoor/outdoor flea market. Gates open 8 AM for general public. Outdoor flea market on paved lot -- setup at 6 AM. Use Exit 253 from I55, or Exits 126/130 from I80. Admission $5. VE testing 9 AM - 12 noon. Bring original license and photocopy, ID and photo ID, plus $5.75 test fee. Novice-only tests are free. Talk-in 147.33, 224.54, and 443.525 MHz repeaters. Indoor table reservation, call Ed Weinstein at 708-085-0527. Info, BARS Hotline (708)759-7005 between 6 AM and 9 PM.

September 17-18, Saturday & Sunday: Peoria, IL - Super-fest. Admission $5. For more info call (309)685-6698. Talk in on 146.76 (-600 kHz offset).

September 24-25, Saturday & Sunday: Grayslake, IL - Chicago FM Club, Ham Radio Expo. This is a large ham-fest with indoor and outdoor flea markets. Lake County Fairgrounds, Rts 45 & 120. 6AM - 6PM. Info 146.76 MHz (-600). Admission $6 at gate, one ticket good for 2

days. Kids under 12 free.

NOVEMBER 1994

Nov 27, Sunday: Wheaton, IL - GMRS of Illinois May Fest
'94. Admission $5. Starts 8 AM. Setup 6 AM. Info,
call (708)690-1492.

>the amplifier.
>
>Exactly where do you expect that 1 watt to be dissipated?
>Why? What effect will you see on the meters monitoring the
>power supply voltage and current of the amplifier?

Aside from the power lost in the circuit loss resistances, contacts,
wiring, tanks etc. The rest will buck and boost the tube static voltage
and current. Since the signal is symmetric, the net effect on the meters
will be nil, summed to zero by the mechanical inertia of the meters.
The signal really disappears into the energy storage of the power supply
decoupling circuit.

John - I suggest that you direct this request to two other groups which
might be better equipped to answer your request for information:
rec.radio.amateur.space and sci.geo.satellite-nav

Also, your final list should be posted in those areas, since they are
the MOST appropriate locations for the data.

(Not to imply that this newsgroup is blind to the subject at hand!)

>I am looking for information about LoJak auto recovery system. I am
>interested in how it works, what frequency/ies it uses, how it is

Ben, Post to rec.radio.scanner. There is an ongoing thread about LoJack
over there.

The most common freq seems to be 173.075 MHz. Look for the 4 antenna
Doppler array on your neighborhood cruiser. Inside you'll find a
dash-mounted panel with a multi-digit display and a ring of LEDs. Once
the system is activated (by LoJack triggering the beacon), the VIN shows
up on the dash and the LEDs point the way.

MA, NJ, FL, DC, and others have the system. Again follow the thread over
on r.r.s for more details.

Source record: 267896

Jeff,
The South La. Crawfish Net meets every night at 8:00 p.m. on
28.400. If the freq is busy, they move up in 5 kc increments. It
consist of the local group of guys from the Thibodaux-Houma, La.
area. It was started to create a little activity on 10 mtrs
during the low activity of the sunspot cycle. They also have a cw net
nightly on 28.350 at 7:30 p.m. Only a few guys check in on this one
if any!!
When the band opens up a little, there are sometimes 4 QSOs on the
same frequency so they tend to ignore any background conversations.
You may have been heard but yet ignored as another QSO on the freq.
Try it again!!!

1213. ARRL Letter Hilites April 13 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-26 15:52:26 UTC
From: marcbg@netcom.com
Message-ID: <$arll0413.1994@ampr.org>
Source record: 267905
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sbay.hams

Hilites from the ARRL's THE ARRL LETTER, April 13 1994

* FCC ORDERS RE-TESTS OF 59 AMATEURS - The FCC has ordered 59 amateur licensees to be re-examined on examination elements passed at examination sessions coordinated by the ARRL-VEC in southern Californin between late 1992 and mid-1993.

The FCC told all 59 that apparent irregularities indicated that the exam sessions were compromised.

"Specifically", the FCC said, "the irregularities on your examination papers indicate that you were apparently given access to the exact (answer) key used by the volunteer examiners."

The FCC gave the 59 amateurs 60 days in which to re-take the exams, at any session coordinated by the Greater Los Angeles Amateur Radio Group, and said that no VE present at the suspect sessions was allowed to administer a re-examination.

Failure to pass the re-exams will result in license class change, loss of call sign, or loss of license entirely, as appropriate, the FCC said.

In the course of cooperating with the FCC's Private Radio Bureau in its investigation, the ARRL-VEC suspended the accreditation of 16 volunteer examiners.

* WASHINGTON GETS LAW ON TOWERS AND ANTENNAS - Washington State has new legislation to protect amateurs. On March 23, the governor signed Senate Bill 5697, a bill that will, according to its backers, limit the ability of municipalities to enact antenna and tower regulations, by pointing out the federal pre-emptions of the FCC's PRB-1. Credited with promoting this legislation were Dr. Ralph Shumaker, WX7T, and members of the Mike and Key Club of Seattle, acording to ARRL State Government Liaison Frank Price, KD7AC.

* Again this year the new edition of the ARRL REPEATER DIRECTORY will debut at the Dayton HamVention. The 1994-95 edition has been reorganized for easier use "on the run," and has more than 20,000 listings of FM repeaters, packet systems, and propagation beacons.

* Check those DXCC application forms; the current form is MSD-505 (194) for all new and endorsement applications. Please DO NOT use older formas, as they lack spaces for critical information

needed for processing at HQ. And business is up again in the ARRL DXCC Branch. In March, 1127 applications for new awards and endorsements were received, and for the first three months of 1994 applications are up by 18%, QSLs by 48%, over 1993. Turn-around time is about three and a half weeks.

* ARRL affiliated clubs are asked to PLEASE advise HQ (or your local Affiliated Club Coordinator, ed) when your club officers or their adresses change, so we can effectively support your efforts. We can't help you if we can't find you!

* The Amateur license application backlog is on the rise again at the FCC: on Feb 1, 8543 were pending, and on Feb 28 there were 12,868 awaiting action, according to ARRL-VEC Manager Bart Jahnke, KB9NM, who also says turnaround time in Gettysburg is hovering around the FCC's self-imposed maximum of 90 days.

* The FCC has reaffirmed a $17,500 fine against a Chambersburg, Pennsylvania man Andrew R. Yoder who the Commission says "willfully and repeatedly" operated an unlicensed broadcast station on 7415 KHz in 1990 and 1991. Yoder had filed an application for review of the May 1992 FCC forfeiture order; in March the FCC denied the application and gave Yoder 30 days to pay the fine.

In Florida, the FCC issued Notices of Apparent Liability to three Citizen's Band operators, for violations including using illegal power amplifiers. The fines were for $1000, $1500, and $4000.

The FCC also released a list of eight individuals cited recently for violations including "operating radio stations without proper authorization and operating on unauthorized frequencies." The fines ranged from $250 to $6400. No other details were given.

1215. NEED INFO, Were you a Army radioman?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-26 17:47:46 UTC
From: urjennings@msuvx2.memphis.edu
Message-ID: <1994Apr26.124746.17353@msuvx2.memst.edu>
Source record: 267935

HI FOLKS,
I'm not sure that this is the correct group to post this question to, but none of the *.military.* groups seem correct correct either. If this post offends you, I apologize. Now that I have cleared my conscience...

I'm looking for info & merchandise.

A friend of mine has this former USArmy bag that he "acquired" while attending a Boy Scouts summer camp in west Tennessee (this was around the mid-80's). There were several others that were bagged (pun intended) by his partners in crime.

Until recently, we thought it had been a map bag, but a few weeks ago someone told my friend that it was a bag for a field radio. Either one seems reasonable & I'm looking for both a definitive answer as to what it is and a source for getting more of them because it's a really handy size.

Here's a description of it; the dimensions are approximations (ie: + or - 2"): 11" tall X 9" wide X 4" deep (front to back), olive drab w/ "US" dyed into to cover flap (looks authentic), full height snap-close pockets on each end, a small pocket on the front (flap cover only, no snap), pen holder(s?), two 1" straps w/metal ends that wrap around (over the top, back to front) to secure the cover flap, another 1" strap wraps around the sides & ties in the front for a more secure closure, & there are metal grometts at the top of each end for clipping on it's 3" web shoulder strap. It's made of heavy fabric (not canvas, though) & there is some kind of plastic-like lining (very deteriorated) adhered to the inside. There is some mostly illegible text printed on the inside of the cover flap but a fairly distinct "1967" or "1969".

Can anyone verify what kind of bag this is & point me to a source for them? I've scoured Army Surplus & many catalogs for 4 years & have yet to find a twin.

E-mail preferred, but posting is OK.

Thanks in Advance!!!!!!!!

>is that at about the same time as Chris used his HT on the Sheriff's
>frequency to summon aid, another person was causing malicious interference
>on Sheriff's frequencies. The word is that the two together greatly
>irritated the Sheriff and drove the coercive activity that relieved Chris
>of his HT.

There were two related circumstances that caused this to get blown out of
porportion a bit. First, about two weeks before Boyer called in his
"emergency" on an SO frequency, there was another person who had been
jamming the SO frequencies using similar equipment, so they were
particularly sensitive at the time this happened. Second, I have heard that
Boyer is an engineer for a local radio or TV station and he admitted in that
meeting with the FCC engineer that he had modified his amateur HT so he
could use it on his station's commercial UHF repeaters and that he regularly
used it on those frequencies. I think this second item is why the FCC went
along with the SO in regard to confiscating the radio because it was not
type-accepted for that use. I believe the radio is still in limbo
somewhere, but RACES never did get it. Hopefully, Chris will get it back
someday. I haven't heard much on this lately though.

[Author was Charles Copeland (copeland@metronet.com)]
[Posted on Tue, 26 Apr 1994 05:55:58 GMT]

Tonight we had a terrible storm with large hail and multiple tornados.
The towns of Desoto and Lancaster were heavily damaged.

I tuned in the ham frequencies (144-148, 440-448) and found a repeater
the hams were concentrating on their reports of conditions. I was
impressed.

As the 10pm news reported on hail damage reports, the hams were
screaming rapid fire reports of exact location of a twister on the
ground (locating it by watching power lines short out in the darkness).
One ham was tracking the storm while driving through 1" hailstones,
but continued on dispite intense damage to his vehicle. You
could hardly hear him through the hail pounding the car.

As the TV news talked of window damage, the hams were reporting
vehicles flipped upside down wrapped up in power lines.

The repeater channel was moderated by one ham and well organized.
They soon had to split the action to a storm tracing channel
and a first aid channel.

The action went on far into the night. All power and telephone lines
were taken out and police and ambulances totally depended on the hams.

My opinion of hams has changed. I used to think it was somewhat a
useless hobby, where all people talked about was radio equipment.

My hats off to all you hams out there.

: My opinion of hams has changed. I used to think it was somewhat a
: useless hobby, where all people talked about was radio equipment.

: My hats off to all you hams out there.

2 years ago we had some severe storms move thru our local area. For the
first time in 10 years the wife and I moved ourselves and our parrots
into the basement just in case.

I brought two scanners: 1 to follow the tornado chasers and 1 to track
what the municipal agencies were doing. There were funnel clouds
all around us when you integrated all the info.

The tornado chasers certainly do everyone a large service and it
isn't boring!!!!!!! (Who *says* ham radio is only a bunch of old geezers
putting each other to sleep?)

Scanning: an addictive hobby that'll put you about 5 jumps ahead of the news.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 APRIL AND FORECAST UP TO 29 APRIL

IPS Warning 12 was issued on 26 April and is current
for interval April 29-May 11.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 081/022

1B. SOLAR FORECAST
27 April 28 April 29 April
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 080/020

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 25 April
Learmonth (07) 3121 ----
Fredericksburg 06 08
Planetary 07 07

Observed Kp for 25 April: 2221 1223

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 Apr 10 Quiet to unsettled.
28 Apr 20 Unsettled to active.
29 Apr 30 Active to minor storm.

2C. MAGNETIC COMMENT
Coronal hole disturbance expected April 29 - May 11.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Apr normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Apr normal normal fair
28 Apr normal fair poor
29 Apr fair poor poor
3C. GLOBAL HF PROPAGATION COMMENT
Conditions expected to remain normal until April 28, then
degraded comms conditions are expected.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 26 April: 45

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
27 Apr 45 Near predicted monthly values.
28 Apr 45 Near predicted monthly values.
29 Apr 40 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Degraded HF comms conditions expected after April 28.

TheNet X1J Release 2 packet Node software.
==========

I have just uploaded the latest release of TheNet X-1J Release 2
to :-

oak.oakland.edu /pub/hamradio/incoming

Dave (G8KBB) and myself (G0JVU) have been beta testing it for a
few weeks with a selected few sites around the world.

This release includes several new gadgets for X1J node operators
and users.

The node now supports four Analogue input ports:-

Port 1 is for the previously announced Deviation meter
Port 2 is for the new Signal strength meter addition
Ports 3 & 4 are general purpose input ports.

I have used port 3 for a temperature sensor and port 4 for a psu
voltage monitor in my local test nodes. I have included a document
(in MS WORD format) called HOTNCOLD.DOC for anybody who wishes to
attempt to add the temperature sensor to the node.

I would be happy to hear of any other uses these ports get used for
around the world.

There will be no PCB this time! Especially as ports 3 & 4 are user
defined!

Best of luck with the product.

73 Neville

My email is "neville@felixstowe.em.slb.com" if needed.

1227. Another use for Morse Code

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-27 00:29:54 UTC
From: haynes@cats.ucsc.edu
Message-ID: <2pkbm2$ant@darkstar.UCSC.EDU>
Source record: 267922

Saw this today in the MIT-produced magazine Technology Review (May/June 1994 issue, page 18) under "Giving Disabled Kids a Start in Science"

"Another student who is unable to control either his hands or his head uses a sip-and-puff device to communicate with the computer in Morse code, blowing air out through a plastic straw for a dot and sipping air in for a dash. The device translates the Morse code into characters the computer can understand.

"Such interfaces can be surprisingly efficient. Students using mouthwands and sip-and-puff devices can type 30 words a minute."

>I read recently that the FCC ruled that it is now permissable to make personal
>calls via autopatch to conduct personal tasks such as making a doctors or
>dentists appointment. Can anyone out there answer the following:
>
> 1: Is this true? And if so

Yes!

> 2: when did the ruling come down and

Late in 1993.

> 3: where can i get a copy of the ruling?

You can get it from the info@arrl.org mail server or ftp site oak.oakland.edu.

The part that changed is 97.113, the jest of the changes is as follows:

old rules:

Communications in which either party has a pecuniary interest are
prohibited. (i.e. unless exempt due to emergency...)

new rules:

Communications in which the station licensee or control operator
has a pecuniary interest are prohibited, including communications on
behalf of an employer.

Therefore,

It is now legal to call anyone on the phone patch unless you the
control operator or station licensee or your employer has a
pecuniary interest.

I wonder how many pizza orders we will hear on the autopatch during this
years field-day?

Hah! Rotsa Ruck. The Lojak people are (IHMO) not going to want anyone to know anything about their system just to make sure that the thieves aren't going to defeat it. I really don't think that you'll be able to rush out and buy a schematic diagram and service manual at your local electronics store. Best of success, though.

1235. UK Amateur gets radio confiscated by Police

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-27 08:10:12 UTC
From: prs@oasis.icl.co.uk
Message-ID: <Cows11.GLv@oasis.icl.co.uk>
Source record: 267932
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

I thought I would relay a story to the net concerning a young friend
of mine. He has a Novice Amateur Radio Licence, his callsign 2E1BZE.

We were on our way to see a football match a few Saturdays ago
(at Reading - Division 2 champions to be). It is customary for
the police to search people going into the ground for knifes and
other weapons. 'BZE had his radio on him, I had mine.

2E1BZE's radio was an ex-police Philips PFX radio set (the same ones that
they use on The Bill - the ones that they speak in to the bottom of the
battery case).

However, this set was programmed solely for the 70cm band - it was
perfectly in order and legal for him to own and operate.

The police confiscated it quoting "The Wireless Telegraphy Act".
He still hasn't got it back yet.

For my part, I had on me my modified dual band handie (modified for
receiving and transmitting out of band only into a dummy load of
course :->).

They didn't seem to take much interest in my radio and let me take mine in
to the ground.

Are the police out of order ? 'BZE is off air until he gets his set back !

It's not the first time recently that the police have hassled local
radio amateurs. In March, our radio club (Reading &DARC) were providing
emergency comms for a 70km competition hike. At 2am the police visited
a number of radio amateurs on the route at different locations and
demanded to know why they were about at that time with radios and what they
were up to ? I was personally stopped by a policeman and told "you're going
to get stopped again if you walk around with those radios".

Anyone had similar problems with the police or is just the Thames
Valley Constabulary ?

I updated the callsign server today. Thanks to donations by Dave Koberstein and H Grant Delaney we have new US and Canadian data. I have also been given Newfoundland data and the UK data and even a little (very little) Japanese data but, because all these databases have very different formats, it is very difficult to squeeze them into the server. I will continue work in this area but I think it might take a redesign of the server itself to handle all the data in a nice way. Sigh.

The US portion of this database is derived from the QRZ! Ham Radio CDROM from Walnut Creek. A copy of this disc was donated by Dave Koberstein, N9DK, and it is current as of January 1994. The US club calls were donated by Jere Sandidge, K4FUM, and arranged to look nicer by Bob Wier, WB5KXH. I believe this database is rather old but I have no date for the information there. The Canadian data was donated by H Grant Delaney, VE4HGD. This data is good as of April 1994. If you have any data that is newer than these or if you have data from another country that you would like to merge into the server please contact me.

The callsign server at the University of Buffalo is a telnet server which means you need Internet access and, more specifically, you need the telnet program to use it. This is very common, so it shouldn't be a problem but if you don't have it, you can't use the server.

Assuming you have the ability to telnet you simply want to connect to the server by doing a

telnet callsign.cs.buffalo.edu 2000

If this doesn't work you can also try

telnet electra.cs.buffalo.edu 2000

or finally

telnet 128.205.32.2 2000

Once you connect to the server you will get a little banner that says you are connected and then you'll get a prompt. At the prompt, I recommend that you first type the "info" command and then type "help" to get you started. You should be able to figure out most of it from there.

Have fun. Let me know if there are other problems.

Devon

1238. Dual Band (2m/70cm) Mobile antennas. Info provided & Opinions wanted

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-27 13:14:11 UTC
From: cropley@cbnewsf.cb.att.com

I've been researching some dual band mobile antennas (2m/70cm)

below is some data that I have gotten via catalogs,etc.
Can't say that they still make all the models below or the prices are still
accurate.
If it appears that I missing Data please send me an email with info.

Brand Gain 2m Gain 70cm Height Mount Price
Model (db) (db) (in) included

: make a J-Pole specially for 70 cm?
: Thanks in advance for your comments.

It depends on the elevation of the station you wish to work.
The extra length of the radiator tends to make the pattern
tilt upward, which is good if you are attempting to work a
repeater or satellite at the pattern peak.

Interestingly, it appears that you can actually get
good low angle radiation with very long verticals--a 25
wavelength vertical for 7 MHz ought to be quite a DX
antenna. However, it might be easier in practice to put
up a full size beam instead of an 825 ft. vertical. Also,
this is a theoretical analysis that doesn't include practical
problems like a conductor that isn't perfectly straight.
Given the actual benefit to cost ratio, I suspect long
verticals will remain a theoretical curiousity. (Not to
be confused with phased vertical arrays, which may look
similar).

For most people, an antenna cut for 70 cm performs better than
a 2 meter antenna that happens to accept power on 70 cm.

This Sperry is quite possibly still what is in use. It is possible that the "computers are down" thing that started this whole thread is because the FCC is junking their Sperry and moving to a PC LAN this month (supposedly electronic filing by the VECs will then be possible by the end of June).

1245. Multfrequency antennas

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-27 16:48:31 UTC
From: lerppu@vipunen.hut.fi
Message-ID: <2pm50v$rti@nntp.hut.fi>
Source record: 267940

I'm all new to the world of antennas and therefore need information
on the following:

A company in Finland manufactures a combined mobile phone/VHF/radio
antenna for use on boats, in cars or wherever. The antenna is 37 cm
long and made of steel rod. It covers frequencies for mobile phone:
860-980 MHz and 435-485 MHz, marine VHF 140-175 MHz and radio 0-110 MHz
receiving. The electronics are built into a filter box of about 6*6 cm.
The connectors are all BNC connectors.

I would like to use a system like this on my sailing boat but I'm not sure
it stands up to its promises.

Does this sound like a good system? What level of damping does a system
like this have? And compared to three different antennas mounted on the
top of the mast, does an antenna like this mounted on the same place
provide the same range of sending and receiving? What kind of cabling do
I need?

Please tell me the advantages and disadvantages of a system like this.
I'm also interested in the physics of such a system.

Thanks in advance

Len

>
>1: My church (non-profit) is having a picnic. Can a few of us HAM's who
>belong use our HT's (at low level, simplex of course) to help coordinate
>the event?
>

This type of activity doesn't bother me, but I have heard the argument that "Yes, it is non profit, but it is conducting the 'business' of the organization" When I hear this argument, I think of the hamfest talk-in and parking usage of ham radio. It certainly is the 'business' of the organization that puts on the hamfest. What if National Public Radio (I think they're non-profit) wanted to use amateur radio to coordinate some activity?

It's a complex issue. I hate it when the government has to lay so many rules down in concrete. I wish common sense / courtesy / good judgement / etc. would work to "control" people's actions. Several hams helping out at a church event without interfering with all the other highly important ham radio communication that goes on in the area seems ok to me.

I'm through rambling now.

MARS stands for Military Affiliate Radio System. it is a Defense
Department sponsored civilian auxiliary designed to provide
certain types of backup assistance to non-tactical military
communications on military frequencies under military
control/supervision. You have to pick a service because that's
the way it's organized. There is no one MARS program. Each
service has it's own.

>rigs will keep it up for a few more days...
>Jim Deeming

Jim,
I have posted on this topic several times, and i think
that having used both rigs, i can point out
a few differences and similarities.

The 530 does scan to find the PL tone in use by a repeater, but the repeater
has to be active and pass the PL to the output, some do not
The 530 is a bit easier to program, but has a compromise in terms
of the VFO arrangement. You can only trtansmit 2 meter
from the left and only 70 cm on the right. You can rx any band on
either side, but each side had
discrete menory channels. In contrast, the th78 can tx and rx either
band from either VFO, and both VFOs use the same memory channels.
this means that you don't have to hog up 2 mem slots if you want
to monitor the same freq on both VFOs.
The alpha-numeric display on the 78 does cut the total mem to 125 channels
but id say that it is WELL worth it.

I think that it is fair to say that the 530 is more "user-friendly"
but the 78 wins hands down for the power-user and VFO flexibility freak
contingent (of which i plead guilt by association).

Have a blast with whatever you pick!

Another one of those SWR myths: The transmitter is NOT matched to the line. If it was then the SWR would be 1:1 and there would be no reflected power anyway. The mismatch is the entire system, not just the antenna to the far end of the transmission line.

For Sale Heath ETW-3400- Assembled microprocessor trainer
and EE-3401-A Complete training course.

This is in new condition.. most of course and manuals, and
tapes and parts still in original packages.

This is "The World's Most Popular Microprocessor Trainer"
used by many universities and is described in Heath's
current catalogs.

The ETW-3400-A sells for $499.95
The EE-3401-A course for $149.95

Total = $649.90

I will sell this for $150 + shipping.

Jeff

Actually it is a fair question as the term has only been applied in
ham radio jargon since the advent of widespread repeater usage.

Simplex refers to the non-simultaneous flow of data in a computer
connection. In radio, it refers to a typical non-repeater
contact whereby each party can only talk while the other is listening.
Additionally, both parties are transmitting and receiving on the
same frequency.

The computer bidirectional capability is called duplex, but that doesn't
refer to a repeater operation as the reality of repeater operation is
that the participants still can only transmit when the other party is
listening. Over time, the term simplex in amateur radio has more
meaning in terms of both parties using the same frequency to both
transmit and receive (whereas the repeater operation you listen to
the repeater output at one frequency, but the input is a different
frequency).

1259. Re: Amplifier impedance (was SWR & Powre Loss)

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-27 20:46:34 UTC
From: zlau@arrl.org
Message-ID: <1994Apr27.204634.2298@arrl.org>
Source record: 267740

While people are busy trying to solve Tom's problem,
I thought I'd help with the following:

Most commonly used amplifiers use variable resistance
devices, which are obviously lossy. Which is why you
need heat sinks or blowers if your amplifier handles
lots of power.

But, there is another type of amplifier known as the
parametric amplifier. Basically, instead of variable
resistors, you use lossless variable capacitors. You
feed in power with a high frequency AC source. It
isn't too common, since with all the power reflecting
around it reportedly was quite a challenge to get working
properly. But, once you got it working, it could offer
very good noise figures before people figured out how
to make microwave transistors. It might be interesting
to see someone implement a parametric *power* amplifier.

>it.)
[...]

Please don't do this! Alt.* is not a trial hierarchy.

If you think there is enough traffic for a rec group, then put
in the RFD for it. (A pre-existing mailing list is a great way
to demonstrate such traffic).

If it fails the vote, *then*, by all means, propose the alt group.
This would be a much more legitimate use for alt.* and will help
keep it less cluttered.

Followups to news.groups, where this discussion belongs.

1261. DR1200 Power Output

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-27 21:59:52 UTC
From: galvin@kingfisher.AUd.alcatel.COM
Message-ID: <9404272159.AA06933@kingfisher.aud.alcatel.com>
Source record: 267948

I have noticed that the Alinco DR-110 from the outside is almost identical to the DR-1200 Data Radio, except that it has 50 watts output while the 1200 has only 25 watts.
The question is; is there a way to increase the 1200's output by using the 110's output PA section?
Thanks for any comments on this.

The 3-Hr Ap Indices for 25 APR 94 are: 8 9 7 4 5 7 7 12
Greater than 2 MeV Electron Fluence for 26 APR is: 3.0E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Numerous B-class x-ray
events were recorded the past 24 hours, all optically
uncorrelated. The biggest event was a B9 which maxed at
26/0215Z. Two new regions were numbered this period: Region
7707 (S01W39) and Region 7708 (N09W71). Both new regions
appear mostly unremarkable at this time. All other regions
have exhibited slow decay the past 24 hours.

Solar activity forecast: solar activity is expected to be very low. Regions 7705 (N03W53), 7707, and 7708 all have the potential of producing C-class activity.

The geomagnetic field has been at mostly quiet to unsettled levels for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be mostly quiet to unsettled for the first two days of the forecast period. Active conditions are expected on day three due to a favorably positioned recurrent coronal hole feature.

Event probabilities 27 apr-29 apr

Class M 01/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 27 apr-29 apr

A. Middle Latitudes
Active 15/20/25
Minor Storm 15/15/25
Major-Severe Storm 05/05/10

B. High Latitudes
Active 30/30/20
Minor Storm 20/20/25
Major-Severe Storm 10/10/20

HF propagation conditions were normal over the last 24 hours. Conditions should continue near-normal until 29 April when high latitudes could begin seeing effects of the major recurrent disturbance responsible for producing minor to major ionospheric disruptions over the last several solar rotations. Conditions over all regions are expected to become disturbed on 30 April.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

>me too. If I were an amplifier and the load didn't want all the power, I just
>wouldn't generate as much power.

Here's another analogy and see if it makes any sense. Consider a syringe.
Since the diameter of the needle << diameter of the plunger, there is a
impedance mismatch. You push on the plunger, and due to the mismatch,
it "pushes back" requiring more ooooomph out of your thumb.

OK, OK, you say, I'll push less, but the rate at which the fluid comes
out is much less than if you push harder. If you push too hard, you
break the syringe.

Granted, this is an analogy, but it gets pretty close to what your
amplifier is doing.

1265. Wanted: Buckmaster CDROM Callbook BBS DOOR

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-27 23:41:04 UTC
From: jwh@kaiwan.com
Message-ID: <2pmt6g$5uk@kaiwan.kaiwan.com>
Source record: 267951

I was told by tech support at Buckmaster that there was a ONLINE DOOR
that enabled users of a BBS to use the callbook portion of there CD.
Well, I've searched high and low.. and have found.. nothing.

What I am asking is that if anyone knows of one, please contact me.

I'm also looking for one that works with the QRZ! Callbook.

SB SPACE ARL ARLS021
ARLS021 Another SAREX success

Another SAREX success

During the just-completed shuttle mission, STS-59, astronauts Jay Apt, N5QWL, and Linda Godwin, N5RAX, used their SAREX 2-meter equipment for a contact with Astronaut Ken Cameron, R3/KB5AWP, on assignment at the Russian space facility at Star City, near Moscow.

The two astronaut-hams also spoke to cosmonaut Anatoli Artsibartski, U6MIR. The contacts were made on two successive passes overhead.

Jay Apt said ''Ken is my friend and former STS-37 crewmate. It was terrific to hear his voice after several months corresponding by e-mail only. What a great way to use ham radio.''

Cameron and Artsibartski were standing near the Star City statue of Russian cosmonaut Yuri Gagarin, using a hand held transceiver and 5/8 wavelength whip antenna, standing on a car to increase their elevation, astronaut Jay Apt related in an Amateur Radio packet message from space.

I will be doing some interviewing at Dayton for my paper on
"Evolution in Postwar Amateur Radio in the United States."
I will have a tape recorder and would love to get your input.

We'll be at the Hampton Inn with the FRC contingent in Englewood,
and the FRC suite and the contest dinner at Stouffer's.

Tnx and CU!!

Greater than 2 MeV Electron Fluence for 27 APR is: 3.1E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Only one weak SF flare from
Rgn 7705 (N04W69) was recorded this period. All other regions
were quiet. Rgn 7704 (N13W29) re-emerged as a 3 spot BXO beta.
New Region 7709 (N02W36) was numbered this period as a single
AXX spot group.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet to unsettled levels
for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet to unsettled for day one of the
forecast period. Day's two and three will experience mostly
active to minor storm conditions due to a favorably positioned
recurrent coronal hole. Storm conditions are expected to
persist well beyond the forecast period.

Event probabilities 28 apr-30 apr

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 28 apr-30 apr

A. Middle Latitudes
Active 20/25/30
Minor Storm 15/25/35
Major-Severe Storm 05/05/15

B. High Latitudes
Active 20/25/30
Minor Storm 20/30/40
Major-Severe Storm 05/10/20

HF propagation conditions were normal over all regions
today. Similar conditions are expected over the next 24 to 48
hours, although minor signal degradation could begin to be
observed over the high and polar latitude regions on 29 April.
Disturbed conditions are expected for most regions on 30 April
as geomagnetic storming intensifies. This activity is not
expected to subside until about 09 May.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
26 Apr: 1922 1930 1938 B2.5 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the

x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

1271. Re: simplex

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 02:56:20 UTC
From: as779@yfn.ysu.edu
Message-ID: <2pn8kk$1l1@news.ysu.edu>
Source record: 267956

The term Simplex is also confused with the older usage
"direct" which implied simplex communication, and on the
same frequency, since it is possible to communicate in a
"simplex" mode with the two operators on different frequencies
within the same band or crossband.
One could suggest to another to "go to .52 Direct"
Just adding to the confusion....

Hello folks.

I mentioned to the people here in Columbus about the ACC Newsgroup or that they had an E-mail address, and immediately they turned around and wanted to know if A/D Technologies of Atlanta, GA had internet access or some sort of news cluster made. They are kind of new to the amateur market, but they have a very nice product. FYI, they will be at Dayton.

Anybody have any information?

Thanks.

Tony N8RRB

CHINA HAM NEWS

APRIL 16, 1994

EDITED BY RICK NIU, BZ1QL

CHINA HAM NEWS IS ORIGINATED AT BY1QH, OPERATED BY THE
TSINGHUA UNIVERSITY AMATEUR RADIO CLUB IN BEIJING, CHINA. IT
IS RELEASED FIRST AND THIRD WEEKENDS EVERY MONTH, AND IS
AVAILABLE FOR UNLIMITED DISTRIBUTION.

WE WHOLEHEARTEDLY CONGRATULATE OUR GOOD, OLD FRIEND
DIETER, DJ7BU, ON OBTAINING HIS AMATEUR RADIO OPERATOR'S CERT-
IFICATE FOR VISITORS. A SIEMENS DEPUTY DEPARTMENT MANAGER,
DIETER HAS BEEN WORKING, BOTH IN THE BUSINESS AND HAM RADIO
AREAS, IN SHANGHAI, GUANGZHOU AND BEIJING FOR OVER FIVE YEARS,
AND IS PRETTY WELL KNOWN IN THE CHINESE AMATEUR RADIO
COMMUNITY. SINCE MARCH 25, 1994, DJ7BU/BY1QH HAS BEEN
OFFICIALLY VALIDATED AND IS OWNED BY A GERMAN RADIO AMATEUR
OPERATING FROM THE PEOPLE'S REPUBLIC OF CHINA.

1ST DIGITAL BA... WHEN A BY1QH MEMBER SPOT BA1GYS ON HF PACKET,
EVERYBODY SAID THERE MUST BE SOMETHING WRONG WITH THE SYSTEM.
BUT THE NEXT DAY WHEN RICK TALKED WITH MR. GUO YUNSHENG (GYS,
THAT IS), HE SAID HE WAS HOPING TO LEARN MORE ABOUT PACTOR1
EQUIPPED WITH TWO STANDARD TUS (A GERMAN HC AND A YX-9001) AND

A 386 COMPUTER PLUS A KENWOOD 440, BA1GYS IS TRYING TO BRING THE 20-ODD BA GROUP INTO THE MAGIC WORLD OF DIGITAL COMMUNICATIONS. RIGHT NOW GUO'S PROBLEM SEEMS TO LIE IN THE LACK OF RELATED REFERENCES, BOOKS, HARDWARE AND SOFTWARE, PREFERABLY FOR PACKET AND PACTOR.

IF YOU ARE INTERESTED IN HELPING THE BA GET UP AND RUNNING, AND YOU HAPPEN TO BE ABLE TO DO GUO A FAVOR, PLEASE DIRECT WHATEVER YOU MAY SEND HIM TO: MR. GUO YUNSHENG, BA1GYS C/O RICK NIU, BZ1QL, ROOM 316 BUILDING 25, TSINGHUA UNIVERSITY, BEIJING 100084, CHINA.

HAM RADIO ON BEIJING TV... A 25-MINUTE ENGLISH LANGUAGE TELE-VISION PROGRAM ABOUT AMATEUR RADIO AND THE TUARC WAS AIRED ON BEIJING TELEVISION (BTV) FEBRUARY 20. THIS MAY HAVE BEEN THE VERY FIRST TIME IN CHINA THAT OUR HOBBY IS INTRODUCED TO THE GENERAL PUBLIC VIA A NOTED TV STATION. FOUR OF THE CLUB MEMBERS - NICK, GRAY, JOHN AND SEAN - DID A SUPER JOB IN THE SHOW WHILE RICK WAS BEHIND THE SCENE AS AN ASSISTANT DIRECTOR. THANKS TO SAM N3NFK FOR A VIDEOTAPE OF REFERENCE.

BT2000BJ QSLS... AT LAST, ALL THE STACKED BT2000BJ QSL CARDS WERE SENT OUT IN THE FIRST WEEK OF APRIL FROM TUARC. AGAIN WE DEEPLY APOLOGIZE FOR SUCH AN 'UNBEARABLE' DELAY. BY THE WAY, THE BY1QH CALLBOOK QSL ROUTE STILL WORKS PERFECT: P.O. BOX 2654, BEIJING, CHINA.

(These were some excerpts from the Chinese amateur scene. The item was too long to run in its entirety.

G-TOR, the new faster HF digital mode ... part 1

by Phil Anderson W0XI and others, from an article in the RTTY Digital Journal March 1994

On New Years Day, W0XI and WK5M transmitted a 9,718 byte file from Kansas to WA4EGT in California on 20-meters in 5 minutes, 20 seconds. The mode was G-TOR. Immediately thereafter, the file was transmitted again, this time using Pactor. It took 20 minutes, 15 seconds. Throughout the month of January these tests were repeated with over one-million bytes transferred error-free. The average character/second rate for G-TOR was 23.7 and for Pactor 8.64.

G-TOR, short for Golay-TOR, is an innovation of Kamtronics Co., Inc. It is a new HF digital communications mode for the amateur service. The error correction coding outlined in MIL-STD-188-141A forms the basis for G-TOR. In order to keep costs low yet take advantage of concepts prescribed in the standards G-TOR makes use of exisiting multi-mode TNC hardware but establishes a completely new hybrid-ARQ system in firmware.

The benefits of these innovations are exceptional:

- dramatically increased throughput
- apparent reduction in the effects of interference an
multi-path
- low cost.

The key features of G-TOR are atypical:

- extended Golay forward error correction coding
- full-frame data interleaving
- on-demand Huffman data compression with run-length
encoding
- link-quality based baud rate: 300, 200, or 100
- 2.4 second hybrid ARQ cycle
- fuzzy acknowledgements
- reduced overhead within data frames
- standard FSK tone pairs (mark and space).

15 April - 21 April 1994

Issue No 16
Date of issue: 22 April 1994

INDICES:
Date 15 16 17 18 19 20 21
10cm 080 082 082 084 085 086 087
A 15 17 60 20 15 08 (08 estimated)
T 24 38 67 20 40 39 39

SUMMARY OF ACTIVITY

Solar activity was very low 15th - 20th, and low on April.

The geomagnetic field at Learmonth (WA) was unsettled 15th-
16th except for a minor storm period on 16th. The field was at
major storm levels on 17th, reducing to quiet to unsettled by
end of the 19th, at which levels it remained until the end of
the period.

Ionospheric F2 critical frequencies at Sydney on 15th and 18th
were near normal or depressed by up to 15 per cent, on 17th,
frequencies were enhanced by up to 30 per cent. Over the
remainder of the period frequencies were near predicted
monthly values.

FORECAST FOR THE NEXT WEEK (22 - 28 April)

SOLAR: Low

GEOMAGNETIC: Quiet to unsettled, possibility of active levels
on 28th. Further geomagnetic activity expected
after 28th.

IONOSPHERIC Near normal.

Courtesy of IPS Radio and Space Services

This week we have received two issues of the DXnotes (8th and
15th). We will attach the Notes of interest from 8th at the
end of the details from 15th, but will not print the callsign
information from that date. If you need this information
please contact Jim VK2BQS or Pat VK2JPA and it will be
forwarded to you.

NOTES OF INTEREST:
CIRCLE 9 JUNE ON YOUR CALENDER FOR THE START OF A ONE WEEK OPERATION BY KEN, V73C, AND FIVE OTHERS, FROM THE FEDERATED STATES OF MICRONESIA (V6). THEY WILL CONCENTRATE ON RTTY AND CW, ON ALL BANDS, INCLUDING WARC. QSL WILL BE VIA OKDXA, P.O.BOX 88, WELLSTON, OK 74881. MORE LATER.

STARTING 16 APRIL FOR A WEEK, OH3MEP WILL BE OH0MEP FROM THE ALAND ISLANDS, ALONG WITH SEVERAL OTHERS OF HIS COUNTRYMEN. ALL BANDS, SATELLITE, AND RTTY ARE PROMISED.

BOB, J28BM, WHO HAS BEEN OPERATING IN DJIBOUTI FOR 20 MONTHS WILL BE GOING QRT AFTER 16 APRIL. HE IS GOING TO SHANGHAI CHINA, AND HOPES TO BE QRV FROM THERE.

HEALTH AND WELFARE:
JACQUES, 9X5LJ, AND HIS WIFE, LEFT THEIR HOME LAST SATURDAY, 9 APRIL, AND TOGETHER WITH OTHER BELGIAN NATIONALS WERE EVACUATED TO A HOTEL IN KIGALI, AWAITING POSSIBLE AIRLIFT OUT OF RWANDA. WE ANXIOUSLY AWAIT NEWS OF THEIR SAFE DEPARTURE FROM THAT UNHAPPY COUNTRY.(HIS APLINK MAILBOX WAS LEFT RUNNING ON 21073 KHZ TO SEE HOW LONG IT WOULD TAKE FOR HIS HOME TO BE LOOTED.)

JOANIE, KA6V, POPULAR QSL MANAGER, HAS BEEN HOSPITALIZED FOR TREATMENT OF CANCER. YOUR QSL CARD TO HER HOME ADDRESS, WITH A GET WELL NOTE, SHOULD HELP SPEED HER RECOVERY.

SEND YOUR BANDPASS AND NOTES OF INTEREST FOR NEXT WEEK'S BULLETIN TO LUCIANO, I5FLN AT ZS5S.ZAF.AF. OR AT I5FLN.ITA.EU.

73 AND GOOD HUNTING DE JULES W2JGR AT W2TKU.#SRQFL.FL.USA.NA (VIA HF AMTOR)

VK2SG RTTY DX NOTES 8 APR 94

NOTES OF INTEREST.

THE ONLY GOOD NOTE FOR THIS WEEK IS A REPORT FROM SYD, VK2SG. SYD STATES THAT HE IS IMPROVING AND SEEMS TO BE GETTING BETTER EACH DAY. NICE TO HEAR FROM YOU SYD AND KEEP UP THE GOOD HEALTH.

THE SAD NOTE IS THE DXPEDITION FROM SPRATLY. PROPAGATION WAS POOR, AND FROM WHAT WE SAW, WERE CALLINS ONLY ON NETS AND LITTLE SPLIT OPERATION SSB ON 20 METERS. NO DIGITAL, WHAT A PITY.

FOR NEXT WEEK'S BULLETIN, SEND YOUR BANDPASS AND NOTES OF INTEREST TO JULES, W2JGR AT W2TKU.#SRQ.FL.USA.NA

REMEMBER, DX DON'T SLEEP.
GL DE BOB, WB2CJL AT W5KSI.#NOLA.LA.USA.NA

1274. Desperately seeking volunteers

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 05:50:32 UTC
From: catz@wattres.SJ.CA.US
Message-ID: <1994Apr28.055032.1894@wattres.SJ.CA.US>
Source record: 267968
Cross-posted to: sbay.hams,rec.radio.amateur.misc

I am seeking volunteers to provide radio support for a bicycle tour in the Aptos vicinity on the 15th of May. I will be arriving at the start of the ride at 6.30am, and will need other volunteers to be there by 6.45am. The ride is called Strawberry Fields Forever and benefits the Global Cyclists Exchange, whose aim is to promote peace among the various peoples on our planet through cycling.

Volunteers get a free lunch, a free ride t-shirt,and various goodies (chocolate dipped strawberries!).

I'm hoping for at least four volunteers, but more would make life easier. If you are interested, please contact me at this address (catz@Wattres.SJ.CA.US), or by phone at 408-255-9677. Thanks!

The subject line says it all. This radio appears to be a commercial mobile. It was donated to me for possible use as a repeater receiver. Does anyone have any information (or a manual that like to copy) on this radio? What frequency range, sensitivity, what is the transmitter power etc.....

Thanks

You re lucky overseas. In Europe, don t think about autopatches. First,
local comms are charged, and it is absolutely forbidden to carry out a talk
with a non-ham.

Come on, order a pizza for me :)

Yes, and they work a treat (pity about having to string all that wire
around though :-) About $20 of components (741 op amp, box, switches,
speaker etc) outperformed my FT-470 100 feet underground...

For working above ground (up to 10,500 feet in one case :-) I prefer
the Yaesu, though!

It's called DOORWAY, and the current version is 2.2. You can find it
on most any BBS around that has a lot of files. DOORWAY handles all
the necessary video and keyboard translations to make programs that
usually write direct-to-screen work over a modem.

: | Jim Grubs, W8GRT

Silly question..... with 12+ week delays etc, and thinking of the
phone bills generated by having to phone ARRL, VEC etc for permission
before phoning the FCC, would it be worthwhile for US amateurs, VECs and
the ARRL to raise funds for a modest PC with a moderately big disc and
volunteer-written software, and then *GIVE* it to the FCC as a donation ?

David GM4ZNX

Happy amateurs,
Happy FCC
Happy Smithsonian !

Round here, the control ops are pretty strict about this use
of the autopatch. When the rule changed, they said: * We will
continue to require anchovies on any pizza ordered over the
autopatch*. (Still havent heard the first pie get ordered).

ARLS022 Astronauts at HamVention

Astronauts at HamVention

A space forum at the Dayton HamVention will feature two NASA shuttle
astronaut-hams, Tony England, W0ORE, and Steve Nagel, N5RAW. The
forum will commemorate 10 years of Amateur Radio aboard the
shuttles.

Tony England flew on the second ham radio mission, in 1985, while
Steve Nagel, a veteran of several shuttle flights, most recently
commanded shuttle flight STS-55 in 1993. The two will discuss their
Amateur Radio experiences from space and answer questions.

Also at the forum will be members of the ARRL SAREX Working Group,
including ARRL Educational Activities Manager Rosalie White, WA1STO,
and Roy Neal, K6DUE, a principal coordinator of the shuttle Amateur
Radio project.

The forum is scheduled for 1 PM on Saturday, April 30, in Forum Room
5 at Hara Arena.

ZS0, 1 and 9 Deleted

Today, the ARRL Awards Committee voted unanimously to accept an ARRL
DX Advisory Committee, DXAC, recommendation to delete Walvis Bay and
Penguin Islands. The deletions are effective March 1, 1994. That
was the date that these areas were turned over to Namibia. There
are now 326 current countries on the DXCC List.

HR AMSAT NEWS SERVICE BULLETIN 106.04 FROM AMSAT HQ
SILVER SPRING, MD APRIL 16, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-106.04

Weekly OSCAR Status Reports: 16-APR-94

AO-13: Current Transponder Operating Schedule:
M QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Apr 07-Jul 11
Mode-B : MA 0 to MA 170 |
Mode-BS : MA 170 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 250 | Blon/Blat 230/-5
Mode-B : MA 250 to MA 256 |
Omnis : MA 250 to MA 120 | Move to attitude 180/0, Jul 11
[G3RUH/DB2OS/VK5AGR]

FO-20: The following is the current schedule for transponder operations:
ANALOG MODE:
20-Apr-94 7:35 -to- 27-Apr-94 7:55 UTC
11-May-94 6:54 -to- 18-May-94 7:20 UTC
Digital mode: Unless otherwise noted above.
[Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

STS-59: To obtain a QSL, either as a result of a SWL or for a QSL, send your report or QSL to ARRL EAD, STS-59 QSL, 225 Main Street, Newington, CT 06111, USA. Include the following information in your QSL or report: STS-59, date, time in UTC, frequency and mode (FM voice or packet). In addit-ion, you must also include an SASE (or sufficient IRCs) using a large, business-sized envelope if you wish to receive a card. The Orange Park Amateur Radio Club in Florida has generously volunteered to manage the cards for this mission. [Bob Inderbitzen (NQ1R) Assistant to the Manager, ARRL Educational Activities]

KO-23: Working well and has a new pair of images. [WH6I]

KO-25: Working well. A number of new images can be found on KO-25 but since the wide angle images are in a new format that so far has not been decoded, and since narrow angle images are very hard to locate in the absence of the companion wide angle image there is very little to get out of the images that are available. [WH6I]

AO-16: Working well. WH6I notes that usage on the 1200 baud OSCARS has has dropped off considerably. [WH6I]

LO-19: Working well. [WH6I]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

ARLB040 Bill to support PRB-1

Bill to support PRB-1

Illinois House Bill 3730 would prohibit cities from enacting laws
failing to conform to PRB-1. ARRL members in Illinois are
encouraged to contact their state representatives, including Speaker
of the House Michael J. Madigan, asking that they support with a
''yes'' vote, Illinois House Bill 3730. Details appear on BBS's
around the state under the heading ''ALLIL''.

Archive-name: radio/ham-radio/hams-on-usenet/part1
Last-modified: $Date: 94/04/28 08 04$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
First part contains primarily European calls with US call district 0.

The index of parts:
Part 1 contains 4x1bq through n0zyc
Part 2 contains nv1a through ka2zvz
Part 3 contains wn3a through kd4zzj
Part 4 contains kj5aa through ab6zz
Part 5 contains aa7a through wa9zxm
Part 6 contains oa4hv through zs6tw

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# This may be the last posting of this list in this form. I have not had
# any time to curl up the replacement format yet, but I suspect it will
# take the form of a `*New* HAMS on USENET List'. I feel this change will
# reduce the bandwidth of the list, and address the issue of the many
# supporters of the list that would like it left unchanged, since many of
# them felt that it was useful for re-acquanting old friends. The entire
# list will still be maintained on both the buffalo.edu service and from
# the email server on my site, so no loss of information will occur.
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
```

```
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#

# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update April 28 1994
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. For fidonet addresses I have
# used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
# (note address numbers in reverse order).
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-M[-D] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987, 1992 CAN or 1993 US). ? after means
# recheck may be required (eg. Call does not match name).
#
# This list has a life of it's own, so references to *my* list will be ignored.
#

1287. Radio Amateurs on USENET List Apr 1994 Part 2 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 14:04:30 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Apr28.2@ve6mgs.ampr.org>
Source record: 267848
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part2
Last-modified: $Date: 94/04/28 08 04$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Second part contains US call districts 1 and 2.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# This may be the last posting of this list in this form. I have not had
# any time to curl up the replacement format yet, but I suspect it will
# take the form of a `*New* HAMS on USENET List'. I feel this change will
# reduce the bandwidth of the list, and address the issue of the many
# supporters of the list that would like it left unchanged, since many of
# them felt that it was useful for re-acquanting old friends. The entire
# list will still be maintained on both the buffalo.edu service and from
# the email server on my site, so no loss of information will occur.
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
```

```
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update April 28 1994
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. For fidonet addresses I have
# used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
# (note address numbers in reverse order).
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-M[-D] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987, 1992 CAN or 1993 US). ? after means
# recheck may be required (eg. Call does not match name).
#
# This list has a life of it's own, so references to *my* list will be ignored.
#

1288. Radio Amateurs on USENET List Apr 1994 Part 3 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 14:04:42 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Apr28.3@ve6mgs.ampr.org>
Source record: 267859
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part3
Last-modified: $Date: 94/04/28 08 04$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Third part contains US call districts 3 and 4.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# This may be the last posting of this list in this form. I have not had
# any time to curl up the replacement format yet, but I suspect it will
# take the form of a `*New* HAMS on USENET List'. I feel this change will
# reduce the bandwidth of the list, and address the issue of the many
# supporters of the list that would like it left unchanged, since many of
# them felt that it was useful for re-acquanting old friends. The entire
# list will still be maintained on both the buffalo.edu service and from
# the email server on my site, so no loss of information will occur.
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
```

also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
a `lookup string ...'. email response limited to 10K. if you want to specify
a return address, add optional `return user@host.domain'. For example:
Subject: Could be anything (sure!)
return wabbit@it.was.a.tewibble.storm.edu
lookup ka2nrc ve6tcp nm1d elmer
#
Last update April 28 1994
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

1289. Radio Amateurs on USENET List Apr 1994 Part 4 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 14:04:53 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Apr28.4@ve6mgs.ampr.org>
Source record: 267860
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part4
Last-modified: $Date: 94/04/28 08 04$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fourth part contains US call districts 5 and 6.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# This may be the last posting of this list in this form. I have not had
# any time to curl up the replacement format yet, but I suspect it will
# take the form of a `*New* HAMS on USENET List'. I feel this change will
# reduce the bandwidth of the list, and address the issue of the many
# supporters of the list that would like it left unchanged, since many of
# them felt that it was useful for re-acquanting old friends. The entire
# list will still be maintained on both the buffalo.edu service and from
# the email server on my site, so no loss of information will occur.
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
```

also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
a `lookup string ...'. email response limited to 10K. if you want to specify
a return address, add optional `return user@host.domain'. For example:
Subject: Could be anything (sure!)
return wabbit@it.was.a.tewibble.storm.edu
lookup ka2nrc ve6tcp nm1d elmer
#
Last update April 28 1994
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

1290. Radio Amateurs on USENET List Apr 1994 Part 5 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 14:05:06 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Apr28.5@ve6mgs.ampr.org>
Source record: 267874
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part5
Last-modified: $Date: 94/05/28 08 05$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Fifth part contains US call districts 7, 8 and 9.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# This may be the last posting of this list in this form. I have not had
# any time to curl up the replacement format yet, but I suspect it will
# take the form of a `*New* HAMS on USENET List'. I feel this change will
# reduce the bandwidth of the list, and address the issue of the many
# supporters of the list that would like it left unchanged, since many of
# them felt that it was useful for re-acquanting old friends. The entire
# list will still be maintained on both the buffalo.edu service and from
# the email server on my site, so no loss of information will occur.
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#
# archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
# Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
```

```
# also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
# courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
# Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
# thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
# email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
# a `lookup string ...'. email response limited to 10K. if you want to specify
# a return address, add optional `return user@host.domain'. For example:
# Subject: Could be anything (sure!)
# return wabbit@it.was.a.tewibble.storm.edu
# lookup ka2nrc ve6tcp nm1d elmer
#
# Last update April 28 1994
#
# This document may be distributed freely, as long as there is no financial
# gain. I do not condone this list being used for generating junk mail or
# other annoyances as this is not the purpose of the list. If you are in this
# list and wish to keep your entry hidden, or that the name I have here be
# changed (My middle name is Gregory and I am **** proud of it :-), I would
# oblige.
#
# Entries have this format (-> denotes separated by at least one tab):
# Address (Name) -> Call -> Date
#
# Address
# Network address popularily used by individuals on the network. Although
# the address that many news posters add may be incorrect, personal
# e-mail contacts or updates are always placed first in the list of
# duplicate calls. Removal of entries is by complaint only, so some
# (mainly .EDU) may be invalid over time. For fidonet addresses I have
# used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
# (note address numbers in reverse order).
# Name Name of the individual.
# Call Call letters of the individual. Old and alternate calls '/' separated.
# Date Last update YY-M[-D] International format.
# A trailing * denotes not searched in call book for verification yet, @
# means not found in call book (1987, 1992 CAN or 1993 US). ? after means
# recheck may be required (eg. Call does not match name).
#
# This list has a life of it's own, so references to *my* list will be ignored.
#

1291. Radio Amateurs on USENET List Apr 1994 Part 6 of 6

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 14:05:18 UTC
From: mark@ve6mgs.ampr.ab.ca
Message-ID: <1994Apr28.6@ve6mgs.ampr.org>
Source record: 267875
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Archive-name: radio/ham-radio/hams-on-usenet/part6
Last-modified: $Date: 94/05/28 08 05$
Version: $Revision: 1.03 $

I would be pleased to take any e-mail updates to this list, preferably at
hams-on-usenet@ve6mgs.ampr.ab.ca. I have split this list into six parts. This
Sixth part contains whatever is left over ... Canadian, Down under
and spots left here and there over the globe. Some Amateur Radio Related email
services are also itmeized at the bottom of the list.

Ciao, 73 de VE6MGS/Mark -sk-

# Network address to name or call letters lookup table maintained by
# Mark Salyzyn VE6MGS mark@ve6mgs.ampr.org
#
# This may be the last posting of this list in this form. I have not had
# any time to curl up the replacement format yet, but I suspect it will
# take the form of a `*New* HAMS on USENET List'. I feel this change will
# reduce the bandwidth of the list, and address the issue of the many
# supporters of the list that would like it left unchanged, since many of
# them felt that it was useful for re-acquanting old friends. The entire
# list will still be maintained on both the buffalo.edu service and from
# the email server on my site, so no loss of information will occur.
#
# Only posting entries less than 12 months old (three terms at most educational
# institutions) in the interest of bandwidth savings. The entire list is
# accessible at the ftp sites and via the email server in any case.
#
# Please send corrections/deletions/additions hams-on-usenet@ve6mgs.ampr.ab.ca
# (if unreachable, mark@ve6mgs.ampr.org or adec23.UUCP!mark is ok). Many
# additions and updates are generated by collecting postings to the
# rec.radio.amateur.* hierarchy, so keep that in mind when requesting
# additions.
#
# Australian Amateur Radio Operators may prefer to mail their updates to Dean
# Davidson (VK2ZID) <ddavidso@metz.une.edu.au>.
#
# Comentarios, sugerencias o contribuciones en espa~ol, por favor hacerlas
# llegar a Rodrigo E. Rodriguez (CE6NUG) <rrodrigu@loa.disca.utfsm.cl>
#
# Any person interested in handling regional versions of the list are invited
# to drop me a note, I am particularily interested in representatives of
# non-english speaking regions so as to increase the accessibility of the list.
#
```

archived for ftp @ ftp.cs.buffalo.edu:hams_on_usenet courtesy of
Devon Bowen KA2NRC <bowen@cs.buffalo.edu>
also ftp @ grivel.une.edu.au:pub/ham-radio/aus.radio/lists/internet.hams
courtesy of Dean Davidson <ddavidso@metz.une.edu.au> for Australian hams.
Canadian and US call sign lookups courtesy of the QRZ HAM Radio CDROM and
thus thank Fred Lloyd <flloyd@qrz.com> for his efforts.
#
email `grep' server reqnet@ve6mgs.ampr.ab.ca in the body of the message put
a `lookup string ...'. email response limited to 10K. if you want to specify
a return address, add optional `return user@host.domain'. For example:
Subject: Could be anything (sure!)
return wabbit@it.was.a.tewibble.storm.edu
lookup ka2nrc ve6tcp nm1d elmer
#
Last update April 28 1994
#
This document may be distributed freely, as long as there is no financial
gain. I do not condone this list being used for generating junk mail or
other annoyances as this is not the purpose of the list. If you are in this
list and wish to keep your entry hidden, or that the name I have here be
changed (My middle name is Gregory and I am **** proud of it :-), I would
oblige.
#
Entries have this format (-> denotes separated by at least one tab):
Address (Name) -> Call -> Date
#
Address
Network address popularily used by individuals on the network. Although
the address that many news posters add may be incorrect, personal
e-mail contacts or updates are always placed first in the list of
duplicate calls. Removal of entries is by complaint only, so some
(mainly .EDU) may be invalid over time. For fidonet addresses I have
used the form #:#/#.#@<Fido>, try <name>@p#.f#.n#.z#.FidoNet.Org
(note address numbers in reverse order).
Name Name of the individual.
Call Call letters of the individual. Old and alternate calls '/' separated.
Date Last update YY-M[-D] International format.
A trailing * denotes not searched in call book for verification yet, @
means not found in call book (1987, 1992 CAN or 1993 US). ? after means
recheck may be required (eg. Call does not match name).
#
This list has a life of it's own, so references to *my* list will be ignored.
#

1292. Czech Republic - 3 Party?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 14:32:00 UTC
From: ted.armstrong@uttsbbs.ness.com
Message-ID: <30490.71.uupcb@uttsbbs.ness.com>
Source record: 267843

Does the Czech Republic allow third party traffic? I have a friend
currently living in Ceske Budejovice, Czech Republic and
wonder if I could contact her through a ham in the Czech Republic.
I am a licensed ham operator.

1293. HF rigs and digital modes

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 15:01:17 UTC
From: slg@rfc.COMm.harris.COM
Message-ID: <Pine.3.87.9404281117.C34580-0100000@fep01.rfc.comm.harris.com>
Source record: 267756

A friend of mine & I are planning on getting into HF digital operation. He has an Icom 728 and I use an Icom 735. We were wondering if these rigs can withstand the stresses of digital modes. Can the PAs handle the required duty cycle? Can the T/R switch handle the frequent switching between transmit and receive?

We're hoping we can operate HF digital without frying our rigs. Any comments/advice would be appreciated.

tnx es 73 de Steve Goldstein, KB2PWM

1294. My phone line antenna (questions)

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 15:13:19 UTC
From: horak@convex.com
Message-ID: <horak.767545999@convex.com>
Source record: 267757

I built the following phone line antenna based on the common postings below. I messed up the center cap by putting two caps (680pf and 150pf) in series instead of parallel, so I got 122pf instead of 830pf. It's dried in epoxy now :-) Anyway, I am real pleased with the functionality of this filter. I added a switch to it that has the following characteristics: switch open allows good reception above 6.5 MHz; switch closed allows good reception below 6.5 MHz. 6.5 MHz seems to be the crossover point. What difference in frequency I might have realized if I would have used 830pf for the center cap? Also, would someone explain why the bandpass frequencies are affected the way they are when the switch is opened or closed. It's been a long time since I learned about how filters work and I'd like a free lesson!

My filter...
1.5uf 122pf 1.5uf
green o--------||---+----||-----+----||-----------o to center conductor wire } }
{ 2.4uh { 2.4uh
} } /
N.C /----------+-----------+--------O O-----o to shield switch

Thanks,

David

: I have posted on this topic several times, and i think
: that having used both rigs, i can point out
: a few differences and similarities.
:
: The 530 does scan to find the PL tone in use by a repeater, but the repeater
: has to be active and pass the PL to the output, some do not
: The 530 is a bit easier to program, but has a compromise in terms
: of the VFO arrangement. You can only trtansmit 2 meter
: from the left and only 70 cm on the right. You can rx any band on
: either side, but each side had
: discrete menory channels. In contrast, the th78 can tx and rx either
: band from either VFO, and both VFOs use the same memory channels.
: this means that you don't have to hog up 2 mem slots if you want
: to monitor the same freq on both VFOs.
: The alpha-numeric display on the 78 does cut the total mem to 125 channels
: but id say that it is WELL worth it.
:
: I think that it is fair to say that the 530 is more "user-friendly"
: but the 78 wins hands down for the power-user and VFO flexibility freak
: contingent (of which i plead guilt by association).
:
: Have a blast with whatever you pick!
:
: pete brunelli
: n1qdq
Pete,
Thanks for the post. I was liking the TH78 pretty well, but the FT530's
battery indicator does have appeal. Also, what of this business about
Kenwoods having what one person called a "chronic" problem of slow CTCSS
detection? Missing out on the first word of a transmission sounds
annoying...

1296. Re: SWR & Power Loss

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 15:28:12 UTC
From: tomb@lsid.hp.com
Message-ID: <Coz6z0.5t1@hpcvsnz.cv.hp.com>
Source record: 267831

David C Gingrich (gingrich@indy.net) wrote:

: Another one of those SWR myths: The transmitter is NOT matched to the
: line. If it was then the SWR would be 1:1 and there would be no reflected
: power anyway. The mismatch is the entire system, not just the antenna to
: the far end of the transmission line.

I hope you are saying that last sentence is part of the myth. In a
single-generator system, the SWR on the line depends only on the
load at the far end of the line (modified slightly along the
length of the line by line losses and non-uniformities in the line,
but NOT dependent on the source impedance of the generator!). This
is quite easy to show with the models or by measurements in a lab.

1297. Hams who work in Irvine, CA

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 16:04:15 UTC
From: William_A._Kirsanoff@smtpgty.anatcp.rockwell.COM
Message-ID: <9403287675.AA767545455@smtpgty.anatcp.rockwell.com>
Source record: 267867

I am looking for any hams who work in the City of Irvine, CA and are interested in disaster communications support.

Irvine sponsors an amateur radio organization called IDEC, (Irvine Disaster Emergency Communications) through the Irvine PD. Volunteers are organized into teams to support emergency services needs throughout the city, such as the wildfires last October, as well as to operate the city's mobile command post for non-emergency activities, such as the El Toro Air Show. We meet one evening each month, on the fourth Thursday, at City Hall. We have two planned citywide drills per year, and several other activities such as 10K runs and walk-a-thons throughout the year.

A recent review of our Earthquake Response Plan resulted in some team redeployment, and we are now looking for hams that work in the city, particularly in or near the east and west industrial areas that would like to participate.

If you are interested, please send me E-mail at the address below. I would rather not take up further bandwidth in this newsgroup with replies. :-)

Thanks and 73

1298. monitoring CB ch 9 / REACT organization

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 16:27:07 UTC
From: ed@fore.com
Message-ID: <Coz9p7.Ao9@fore.com>
Source record: 267850

Yes, I know CB is a bad word here, but I will post this anyway...

I am a recently "Test passed" ham (no call yet), and a CB er for many years.

I have talked to several hams over the years on CB, some even Elmers
& VE's. I try to operate & maintain Amateur Radio standards when I
am using CB or 11 meters. And yes I DONT talk with a southern drawl
and call everybody "good buddy"!

I have monitored CB channel 9 for a while, and have heard several
calls to "smokey" or the police go unanswered, and started answering
them myself and forwarding info to local 911 dispatcher.

The police used to monitor CB, even the PA state police had signs
on the turnpike that they monitored CB ch 9. Baloney! I tried to
get help for a broken down motorist several years ago, to no avail
until I drove to state police building, walked in and told dispatcher
the situation. What bugged me, he had a cobra CB not 5 feet behind
him, turned off & unplugged! USELESS!

Is there still a REACT organization in existance?
Does anybody know how to contact them?

Is this something ARES would have an opinion on or even want to
mess with?

Is there a "standard" simplex emergency freq on 2m, 220, or 440?

Email responses to Ed@fore.com

1302. GB2RS News 1st May 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 18:22:17 UTC
From: dave@llondel.demon.co.uk
Message-ID: <767582537snx@llondel.demon.co.uk>
Source record: 267761
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 1st of May and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

And we start this week with the news that a rare RSGB Supreme VHF/UHF Award was issued to David Bullock, G6UWO, on the 5th of March. This coveted certificate was awarded for obtaining three RSGB Senior awards between October 1990 and March 1994. These were for contacts with 40 counties and 9 countries on 432MHz; 40 counties and 6 countries on 1296MHz and 60 counties and 15 countries on 144MHz.

Brian Underdown, G7LIJ, has gained the RSGB 144MHz award for having confirmed contacts with over 100 squares and 20 countries. What makes this really remarkable is that his certificate is endorsed: 'All contacts to achieve this award were effected during the first year of being licensed'.

Details of the RSGB VHF and UHF awards can be found in the RSGB Call Book or may be obtained from the VHF Awards Manager, Ian Cornes, G4OUT whose address is correct in the Call Book.

The South Yorkshire VHF repeater, GB3NA, will return to service at 12 noon today, the 1st of May. This follows an investigation by the Chairman of the RSGB Repeater Management Group into allegations of misuse of the repeater. After consultation between the UK FM Group (Northern), who manage the repeater, the Radiocommunications Agency and the Repeater Management Group, it has been agreed that a number of strategies will be adopted by the committee to combat abuse. It has been agreed that the group should monitor the extent of misuse of the repeater with the aim of educating users how to respond in the face of provocation and misuse of the repeater. This will involve tape-recording repeater traffic, direction finding and informing the authorities via RMG. A number of other measures have been taken which are aimed at minimising the problems caused to legitimate users by persistent mis-users of the repeater. The committee of the UK FM Group (Northern) has been re-organised. It is hoped that all users will act sensibly in using the repeater. The Chairman of the RMG would like to thank all amateurs in the area for their input which has proved most useful in reaching a conclusion.

The two metre Repeater GB3LY on 145.600MHz, channel R0, operated by the Limavady Repeater Group has been switched off by the keeper, due to on-site interference. The keeper Jimmy, GI3GGY, and the Repeater Group members would like to thank all those who have supported GB3LY during the past 15 years and regret any inconvenience until the problem is resolved and the repeater is reactivated. For further details regarding

the repeater contact, GI3GGY whose address is correct in the RSGB Call Book.

A new Packet Node, GB7AR on 144.650MHz, which is located near Caernarfon, Gwynedd, is due to become operational next Friday the 6th of May. For further details and reports contact GW4KAZ, whose address is correct in the RSGB Call Book.

The 3 Centimetre Beacon GB3CMS on 10.36896GHz, located near Chelmsford is now off air for maintenance. For further details regarding the beacon contact the keeper, G4ZPE whose address is correct in the RSGB Call Book.

The RSGB QSL Sub-Manager for the GM0AAA-LZZ callsign series is now Mr G W A Spiers, GM0AGN, whose address is: 43 Sheuchan View, Stranraer, Dumfries and Galloway DG9 7TA. He has taken over from Miss Karen Hunter, GM0JHE.

With immediate effect HF Committee member, Fred Handscombe, G4BWP, will process all new applications for RSGB HF Awards. For the past several years the RSGB's HF Awards programme has been in the capable hands of Bill Ricalton, G4ADD. Bill now wishes to relinquish this post and a replacement is to be recommended to RSGB Council by the HF Committee. The committee wishes to record a sincere vote of thanks to Bill, G4ADD for all the work that he has done since taking on the task of HF Awards Manager.

Fred Handscombe's address is: Sandholm, Heath Farm Road, Red Lodge, Bury St Edmunds, Suffolk IP28 8LG. All new applications for RSGB HF Awards should now be sent to this address.

Attention RSGB members in Tayside: A new RSGB Liaison Officer (RLO) has been appointed for Tayside. He is Alfred Low, GM4UZP, and his address is 21 Earn Crescent, Menzieshill, Dundee DD2 4BS. His telephone number is 0382 644597. RLOs hold a wide range of information and they are available to help any RSGB member seeking advice.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Dominica, IK2GNW will be QRV from today Sunday the 1st until Tuesday the 10th of May. His J7 callsign will be issued on arrival. Activity will be SSB only on 160 - 10 metres, with emphasis on 12 and 17 metres.

From Micronesia, JR7OEF and JR7JLU will sign, respectively, V63NI and V63YH from Thursday the 5th until Sunday the 8th of May. Activity will be on CW and SSB.

And from Barbados, DL7VOG will be active as 8P9GQ from Tuesday the 10th of May for twenty days. Activity will be on all bands 10 - 80 metres.

Now the Rallies for today Sunday the 1st of May:

The 11th Anglo-Scottish Rally is being held at Tait Hall, Kelso, Borders. Doors open at 11am. The event features trade stands and a bring and buy stall. Refreshments will be available and talk-in is on two metres, channel S22.

The British Amateur Television Club (BATC) Rally is being held at The Sports Connexion, Leamington Road, Ryton-on-Dunsmore, Coventry. Note that this is a new venue for this popular rally. The event features the usual trade stands, demonstrations, a lecture programme and a bring and buy stall. Refreshments will be available.

Next the two rallies we know of for tomorrow, Bank Holiday Monday, the 2nd of May:

The Dartmoor Radio Rally is to be held at the Yelverton Memorial Village Hall, Meavy Lane, Yelverton, Devon. Doors open at 10.30am. The event features trade stands, a bring and buy stall and other attractions. Refreshments will be available and talk-in is on channel S22. For further information contact Ron on 0822 852586.

The Mid-Cheshire Amateur Radio Society Rally will be held at the Civic Hall, Winsford, Cheshire. Doors open at 11am, or 10.30am for disabled visitors. The event features trade stands and a bring and buy stall. Refreshments will be available and talk-in is on two metres, channel S22 and seventy centimetres, channel SU22. For further details contact Dave, G4XUV on 0606 77787.

And now two events for next Sunday the 8th of May:

The Midland Amateur Radio Society, Drayton Mobile Radio Rally is to be held at Drayton Manor Park, Tamworth, Staffordshire, on the A4091 road. Doors open 10.30am. The event features trade stands, club stands, a flea market and a car boot area. Details from G6DRN on 021 443 1189.

The 10th Yeovil QRP Convention is to be held at the Preston Centre, Yeovil. Doors open at 9am. The event features traders orientated towards QRP, kits, components etc. There will be a club bring and buy stall, QRP station demonstrations, displays of home built rigs, vintage ham radios and communication equipment. Talks are planned covering propagation, construction and RSGB matters. Talk-in will be on 2 metres, channel S22 by GB2LOW. For further details contact G3CQR on 0935 813054.

Now some dates for your diary:

This year's RSGB Headquarters Open Day is scheduled for Saturday, the 4th of June. Details can be found in the May edition of Radio Communication. RSGB affiliated Clubs and Societies are invited to take part in this year's open day by providing a display or stall. Interested clubs are asked to contact Justine Hodges at RSGB HQ urgently on 0707 659015.

The next RSGB Regional Meeting takes place at Brighouse in West Yorkshire on Sunday the 5th of June. These meetings are for members and non-members of the Society to meet Council Members, Society Officers and

staff to discuss the workings of the Society and amateur radio related matters. For further details, contact RSGB Zonal Council Member Peter Sheppard, G4EJP, on 0964 550397.

HF contest news now:

The Yeovil QRP Funrun Contest starts tomorrow, Monday the 2nd and runs daily from 8 to 10pm local time until Friday the 6th of May. See April RadCom page 73 for full details.

The ARI International DX Contest takes place during next weekend, starting at 2000 on Saturday the 7th and finishing at 2000 on Sunday the 8th of May, using all bands from 1.8MHz to 28MHz but excluding the WARC bands, on CW, SSB and RTTY. The contest is rather complex so participants are advised to consult the rules which can be found in the April edition of RadCom on page 20.

The Danish SSTV Contest is scheduled to start at 0000 on Saturday the 7th and finish at 2400 on Sunday the 8th of May on 3.5 to 144MHz, but excluding the WARC bands. See the May edition of RadCom for further details.

The fifth in this year's series of RSGB QRS (Slow Morse) Cumulative Contests will take place on Monday the 9th of May from 1900 to 2030 UTC between 3.540 - 3.580MHz. See April RadCom page 8, for further details and January's RadCom, page 83 for the rules. Novice licensees are particularly encouraged to participate as contacts with Novice calls are worth quadruple points.

Next some VHF contest news:

The RSGB 70 Centimetre Trophy Contest take place next Saturday the 7th of May, from 1400 to 2200 UTC. Starting at the same time is the 432MHz to 24GHz Contest which is a 24-hour event. See February RadCom, page 83 for further details of both events.

Special event stations active in May include:

GB0CT, Channel Tunnel, which will be aired by members of the British Rail Amateur Radio Society from New Romney Railway Station, near Folkestone, Kent. At the same time TM5TSM, will be operational from Wimereux Town Hall near Boulogne. Both stations will be operational from next Friday the 6th, until Sunday the 8th of May, on 80, 40, 20 and 2 metre and 70 centimetre bands. An Amateur Television Station will also be set-up on both ends of the channel tunnel. These events form part of the opening celebrations being held during May. For further details contact G3FIB on 0474 706615.

OZ5MAY, will be operated by OZ9CM from the Museum of Denmark Fight for Freedom on Thursday the 5th of May from 1000 to 1300 UTC on 14.006 or 14.020MHz. The station will operate from the attic in the museum that Gunner Christiansen, code name Mat, was using in WW2. Another station, OZ5MAJ/P will be operational from the attic of the Danish Student's

Rowing Club from 1000 to 1800 UTC using these frequencies: 3.560 or 3570MHz, 7.010 or 7.030MHz or 14.006 or 14.020MHz. The two stations will be operational using suitcase transceivers and a watertight B2. For further information about the stations, contact Lars Schultz, OZ1CHL telephone Denmark 45 40 50 07 77.

And now the solar factual data

The period from the 18th to the 24th of April has seen the magnetic activity decline to near normal levels, and the ionosphere recover to about what we should expect at this time. There has been no flare activity and solar activity has remained very low. The spot index has meaned about 43, slowly rising over the period. Solar flux levels have also improved and averaged 85 units but they are still below what we would expect at this time. The 90-day flux mean on the 24th was 92 units. Geomagnetic activity has declined from 'sub-storm' levels on the 18th down to 'quiet' by the 20th and has remained there, with the 24th being down to an Ap index of only 7 units. The period averaged 11.5 units which is the lowest weekly period since last January.

The state has been 'nil nothing to report' throughout the period. The aa indices, as supplied by the British Geological Survey for the period 12th to 18th April, were very disturbed. The daily averages were 49.9 nanoteslas but the 17th, with the mass ejection and aurora reported last week, levels rose to 192 nanoteslas during the early morning period. That day's average was 97.1 nanoteslas. X-Ray flux levels have continued to improve and averaged A5.2 units.This is still below what we should expect at this time but it is a major improvement over the past weeks. The monthly geomagnetic Ap indices for March were 22 units, the 6-month smoothed for September 1992 is 15.4 units.

I'll repeat the figures. Spots - 43; Flux - 85; Ap index - 11.5; X- ray flux - A5.2.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, have shown a major improvement with levels averaging 7.5MHz, and the 21st being up to 8.5MHz. The daily highs are now centred about 19.00 hours. The darkness hour lows have also risen and averaged 3.3MHz, though the seasonal changes are partly responsible for some of it; the lows are now centred about 03.00 hours.

I'll repeat the figures. Highs - 7.5MHz; lows - 3.3MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg has seen a considerable improvement rising from an average of 5.5MHz last week up to 7.0MHz this week, with the 21st being up to 7.7MHz. The darkness hour lows averaged 3.0MHz, again a worth-while improvement.

I'll repeat the figures: Highs - 7.0MHz; lows - 3.0MHz.

And lastly the solar forecast:

This week the part of the sun where the mass ejection occurred will have rotated to be looking our way again. It is most unlikely that all of the disturbance will have died down, so from today we could expect problems from geomagnetic disturbance. Geomagnetic levels may be up to an Ap of about 50 units and auroral conditions could result today. Levels are expected to decline as the week proceeds. Ionospheric MUFs are expected to be only about 16.0MHz in the south, improving slightly as the week goes by. Northern stations are expected to be severely affected with very depressed levels most of the week.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Victor and G7 Sierra India series, and Novice calls in the 2 0 Alpha Hotel and 2 1 Charlie Victor series.

You're listening to GB2RS, the news broadcasting service of the Radio Society of Great Britain, transmitting in the 80, 40, 6 and 2 metre bands.

> This type of activity doesn't bother me, but I have heard the argument
> that "Yes, it is non profit, but it is conducting the 'business' of the
> organization" When I hear this argument, I think of the hamfest talk-in

But don't forget the revised 97.113 rule which says explicitly that
this sort of thing is OK as long as you are not conducting _your_
business or the business of _your employer_.

Also, the FCC has issued at least one policy statement that I can
recall (but I don't remember where I saw it; the ARRL FCC rule book,
maybe) that explicitly says that public service stuff like this is not
just allowed, but encouraged.

Just my $0.12 (inflation and sales tax added :-))

/Matthew

: : FCC gets a new one. :)

: Silly question..... with 12+ week delays etc, and thinking of the
: phone bills generated by having to phone ARRL, VEC etc for permission
: before phoning the FCC, would it be worthwhile for US amateurs, VECs and
: the ARRL to raise funds for a modest PC with a moderately big disc and
: volunteer-written software, and then *GIVE* it to the FCC as a donation ?

I wouldn't help unless we were willing to put in a major effort to re-write
the software to go with it. It's the same problem NASA has with the space
shuttle. Sure, the computer hardware is woefully out-of-date, but a new
computer would require rewriting and then re-flight-qualifying the software.
A serious software bug in the FCC's computer wouldn't be QUITE as
disasterous as one in the space shuttle, but it wouldn't be too nifty either.

There are reliability questions as well. I'm very sensitive to this
having had a hard disc crash on my PC a few weeks ago :=(

It still might make sense for ARRL to buy the FCC a high-reliability
computer and hire a professional programmer to write them some software.

Tom Bruhns (tomb@lsid.hp.com) wrote:

: At HF, and generally up into VHF, almost all the loss in matched
: coax of decent construction is in I^2*R loss in the conductors. Very
: little is in dielectric loss.

That's true, but the dielectric can still increase the loss indirectly.
Air-dielectric coax requires a certain ratio of outer conductor to inner
conductor diameter to achieve the desired impedance. When you add
a dielectric material, the center conductor must get smaller to maintain
the same impedance. Smaller conductor = higher resistive loss. That's
why foam-dielectric coax has less loss than solid-dielectric type: The
effective dielectric constant is lower, allowing a larger center conductor.

: the amplifier.

: Exactly where do you expect that 1 watt to be dissipated?

In the power amplifier tube, assuming everything else is lossless.

: What effect will you see on the meters monitoring the
: power supply voltage and current of the amplifier?

Nothing. Since the tube is assumed to be in its linear region,
the 1 watt is a small signal wiggling the plate voltage up and down,
with a resulting AC current determined by the tube's output plate
resistance. If the signal becomes large enough to get a non-linear
response in the tube, then there might be some self-rectification
causing a change in DC plate current.

In article <Coz9p7.Ao9@fore.com>, ed@fore.com (Ed Bathgate) writes:

Hi Ed,

|> I DONT talk with a southern drawl
|> and call everybody "good buddy"!

"Good buddy" has been out for years, but a genuiune accent will always
get you a comeback when you want a quick smokey report.

|> I have monitored CB channel 9 for a while, and have heard several
|> calls to "smokey" or the police go unanswered, and started answering
|> them myself and forwarding info to local 911 dispatcher.

I'm a long time CB'er myself. Only for road conditions, smokey
checks, and report disabled motorists, which I do nearly once a day.

|> The police used to monitor CB, even the PA state police had signs
|> on the turnpike that they monitored CB ch 9. Baloney! I tried to
|> get help for a broken down motorist several years ago, to no avail
|> until I drove to state police building, walked in and told dispatcher
|> the situation. What bugged me, he had a cobra CB not 5 feet behind
|> him, turned off & unplugged! USELESS!

I once tried to call NJSP with an accident with injuries. I could see
the building (NJSP Bridgewater) and they ignored me. I have had success
calling Bridgewater Twp PD, which is located literally across the street.
So, after being ignored for a few minutes by SP, I called the Twp and they
replied immediately. I asked them to notify state of the condition, and
state came on immediately with "State Police received, we'll handle it
Bridgewater." Thanks, bud. POINT: If they don't answer, it doesn't mean
they don't hear. I can't remember REACT's main motto for calling information,
but they insist that you always act as if someone can hear you. Obviously,
I didn't that day.

I try to keep tabs on all of the places I've made contact with public
service, since it helps in the future. I've been able to reach
Bridegwater Twp, NJSP Bridgewater, NJSP division hq on the NJ Turnpike
at exit 9, and a state police barracks way out on Route 78 near pennsie.
Oh yeah, some PD's in Lower Bucks county PA turn on their radios in
extreme weather conditions. And finally, Clinton Twp PD in northern
Hunterdon County. There's only like 12 cars in the whole organization, so
all of the officers decided to buy their own CB's and install them in their
cruisers on their own. Ask for a "46 car" for a real quick response. That's
their township identifier on the hunterdon north frequency of 154.785.

Ohio SP has them in their cars, too. At least the one I talked to did.

At the divisional HQ by exit 9, I key the mike about six times for two seconds and then start transmitting. It seems to get their attention long enough to turn around before you start talking. I also find I get more professional responses when I use *their* ten codes. A dispatcher in a dispatcher's state of mind can probably relate to a "13 mechanical" more quickly than "someone is broken down and probably needs a tow".. especially when they use the phrase 400 times a day, as NJSP does.

|> Is there still a REACT organization in existance?

Yes, indeed. One of the longest running REACTs in NJ coordinates support for Somerset County, when someone's working.

While I was calling in a disabled in a snow bank one year, a REACT member heard me and talked me into going to their next meeting. I have never seen so many guys that dress like the Rhinestone Cowboy in one room in my life. They really look like they've missed the fashion express for quite a number of years! I was hoping that they organized ride arounds, just scoping highways for broken down motorists and monitoring Ch. 9 and using ham radio to coordinate things with the authorities. No such luck. "Well, we need more volunteers to help people park at the Hot Air Balloon Festival." Thank you no. At least I got a frequency chart for all the area REACT teams, and there are a lot. Of course, I can't find it now, but..

|> Does anybody know how to contact them?

You saw how I did. I would say, call a suburban to rural police department, get the team for them, and then go through internal channels.

Personally, my radio resets to 9 when I reset the power, so I am my own little REACT response unit whenever I'm on the road. I have pulled over to make many a phone calls and have had the favor returned by others. I like being one more set of eyes for the poe-lice.

|> Is this something ARES would have an opinion on or even want to
|> mess with?

I don't know ARES very well, but I picture them getting involved in *much* higher levels of assistance, like when hams were the only way off of the Hawaiian Islands after their last hurricane, and not an elderly couple trying to change a tire late at night.

|>
|> Is there a "standard" simplex emergency freq on 2m, 220, or 440?

There's an online 2m repeater guide floating around here, and one feature I enjoy is the indicator next to repeaters that have direct contact with authorities. There are a few hokie towns here in Jersey where most of the cops are also hams, and they sit around in area Dunkin Donuts' holding roundtables to keep the night going. That's a good place to start.

Y'all,

The primary repeater for weather spotting is 146.88. After the tornado struck people who were responsible for aid to the cities were moved to 146.82. The '88 repeater was still being used for weather spotting. I think someone setup a crossband-repeat because after reporting to the staging area, I was told to move to a 440 frequency. I have found that there is about a 10 minute delay between when the hams first sight something and the TV and radio to report it. My entire family now tunes in to the repeater instead of regular TV and Radio.

QST de W1AW
DX Bulletin 25 ARLD025
>From ARRL Headquarters
Newington CT April 28, 1994
To all radio amateurs

SB DX ARL ARLD025
ARLD025 DX news

The items in this weeks bulletin are courtesy of Scott, N9JCL, Bob, W5KNE, QRZ DX, the Ohio/Penn DX Bulletin, Chod, VP2ML, The DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and Contest Corral from the pages of QST. Thanks.

MARION ISLAND. Christie, ZS8MI, though still active, will be leaving in about 2 weeks. Check 28354 kHz at 1100z, 18162 at 1145 and 14130 around 0600.

CAMBODIA. Laci, HA0HW, plans to be on from Phnom Phen from May 8 to 20. He will sign XU0HW and operate CW and SSB on 160 through 10 meters. Laci and Sanyi, HA7VK, who is currently signing XU7VK, hope to travel to Rong Island in the Gulf of Thailand and operate for about five days as XU9HA. QSL all three calls via Laci Szabo, PO Box 24, H-4151 Puspokladany, Hungary.

MICRONESIA. Nori, JR7OEF, has scrubbed plans for 3D2, A35 and 5W due to transportation woes. He and JR7JLU will sign V63NI and V63YH respectively, from May 5 to 8. QSL via their home calls. And between June 8 and 17 AH9B, AH9C, AD1S, V73A and N5MIH will be sporting V63 calls on 160 through 10 meters on SSB, CW and RTTY. QSL all direct only via OKDXA, Box 88, Wellston OK 74881.

ANGOLA. John, G4AAL, is in Africa and hopes to obtain licenses for visits to Angola and Mozambique. Meanwhile, D2EGH has been worked on 14190 kHz at 2109z. QSL via CT1EGH.

DOMINICA. IK2GNV expects a J7 call sign to be issued him upon his arrival. He plans to be active on 160 through 10 meter SSB from May 1 through 10.

TUNISIA. Tom, IK8EVE, is now active from Jerba Island using the call sign 3V8TM. He has been worked on 7008 kHz at 2333z from New

England.

MALTA. A group of Dutch operators hope to be active from Sliema June 24 to July 4. This DXpedition/Holiday will feature CW and SSB on 80 meters through 70 cm with some OSCAR 13 thrown in for good measure. Listen for PA0BEA as 9H3IE, PA3BIZ as 9H3ON, PA0PRT as 9H3IB, PA3DNW as 9H3KF, PE1KNL as 9H3QH, PA3ETB as 9H3KD, PA0JWK as 9H3QD, PA0PAN as 9H3KE. Operators PB0AES, PE1NZA and PA0TPM have yet to receive their Maltese call signs. QSL to each operators home CBA.

ETHIOPIA. OH2VZ has been signing ET3VZ. Try 21033 kHz at around 1325z. QSL via OH2VZ.

MARKET REEF. A group is planning a May 14 to 17 DXpedition, weather and transportation permitting. Hopes are for 160 through 6 meter activity, with CW, SSB and some RTTY. Listen for OJ0/AC6T, OH0MB, OJ0/OH1VR, OJ0/OH6RM and OJ0/OH2BBF. QSL to their home calls.

MOUNT ATHOS. Apollo, SV2ASP/A, was reported on 18148 kHz recently between 1400 and 1445z.

EASTERN KIRIBATI. Tada, JA1WPX, plans to sign T32WP from Kiritimati Island May 4 to 8. Though an all band effort, 30 and 17 meter CW will get special attention. QSL via JA1WPX.

CORSICA. A group of Italian operators plan an all band CW/SSB operation from May 19 to 23. They will concentrate on the lower bands and 30, 17 and 12 meters. On SSB listen for TK/I4ULA/P, TK/IK4HAL/P, TK/IK4NZD/P and TK/IK4GLV/P. CW stations will include TK/I4VJC/P, TK/IK4CIE/P and TK/IK4IDW/P. QSL via specific operator you work, either by the Bureau or CBA.

LORD HOWE ISLAND. Tony, VK9LA, long time resident of the island, can be found on 7084 kHz at 1130z with the Pacific Rim 40 DX Group. QSL via A.J. Tony Blasl, c/o Post Office, Lord Howe Island, NSW 2898 Australia.

BERMUDA. Bill, WB1BRE, must think Bermuda is for the birds. He will sign /VP9 on OSCARs 10 and 13, SSB only, between May 13 and 26. Check just before and after Mode S apogee between 145.910 and 145.930 MHz. Bill also plans to be on 20, 15, and 10 meter SSB, mostly in the lower portion of the General subbands and in the Novice portion of 10 meters. QSL via WB1BRE. Fred, K1EFI, will sign /VP9 on 80 through 10 meter CW only from May 12 to 20. QSL via K1EFI.

BARBADOS. Gerd, DL7VOG, will sign 8P9GQ from May 10 through 30 on 80 through 10 meters, mainly on CW, but with some SSB and RTTY. QSL via DL7VOG.

ON A SAD NOTE. Jerry, AA6BB, called the DXCC Desk reporting that his XYL Joannie, KA6V, became a Silent Key at 1105z April 28.

Joannie was very active in DXing with the W7PHO Family Hour Net and QSL Manager for many stations, including the VP8SSI and 3Y0PI DXpeditions. RIP, Joannie.

COURSE CORRECTION. An error crept into last week's bulletin, ARLD023/DX CW23. The correct QSL manager for the upcoming CY9 operation is K0SN and not K0XN as originally reported.

NEW QSL ROUTE. Due to suspected mail pilferage, the new route for cards bound for TI9CF and TI9JJP is Office Box Acct 321 CR, 3900 NW 79th Avenue, Suite 564, Miami FL 33166. It is reported that mail addressed this way will be delivered to Costa Rica by courier service.

1313. Re: Repeaters in Monterey area?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-28 23:38:04 UTC
From: srbible@cs.nps.navy.mil
Message-ID: <2pphcs$j8k@nps.navy.mil>
Source record: 267844

Hmmm, I must have missed the orginal post. Here's some info:

The two predominant repeaters are:

K6LY sponsored by the Naval Postgraduate School
146.97(-) pl 94.8
444.70(+) pl 123

KM6DZ sponsored by the Monterey Area Repeater Group
146.655(-) pl 94.8
(and a 440 that I can't remember the freq to :-)

KM6DZ has a much longer range than K6LY as it has remote receive sites
around the area. The Salinas hams use it lots.

The NPSARC meets on the second Thursday of the month. If you're in
the area come on by. You can interface through me if you need more
information on the area.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z APRIL 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 APRIL AND FORECAST UP TO 1 MAY

IPS Warning 12 was issued on 26 April and is still current
for the interval April 29 - May 11.

1A. SOLAR SUMMARY
Activity: very low

Flares: none

Observed 10.7 cm flux/Equivalent Sunspot Number : 077/016

1B. SOLAR FORECAST
29 April 30 April 01 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 077/016

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 27 April
Learmonth 04 2221 2100
Fredericksburg 05 06
Planetary 08 05

Observed Kp for 27 April: 1122 2211

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
29 Apr 25 Unsettled to active.
30 Apr 60 Active to minor storm.
01 May 60 Active to minor storm.

2C. MAGNETIC COMMENT
Coronal hole disturbance expected April 29 - May 11.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Apr normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Apr normal normal normal-fair
30 Apr normal normal-fair fair-poor
01 May normal normal-fair fair-poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 28 April: 49

Predicted Monthly T Index for April is 40.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
29 Apr 45 Near predicted monthly values.
30 Apr 30 About 15% below predicted monthly values.
01 May 20 About 15% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

1318. Canadian Reciprocity

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-29 03:40:43 UTC
From: un111@freenet.Victoria.BC.CA
Message-ID: <1994Apr29.034043.3530@freenet.victoria.bc.ca>
Source record: 267863

I recently moved to Canada from Kansas, but am unsure of
the reciprocity issue. I have a General Class U.S. license (N0LKI) -- do I
have the same privileges (band and emission limits, etc) here in
Canada as I would in the states?
There're probably other ways to find this information, but
I had to leave most of my library, including most amateur books,
back in the states.
Thanks for any help, either posted here or e-mailed to me.

SYNOPSIS OF ACTIVITY

Solar activity was very low. A Type II sweep was
recorded this period with a start time of 28/0146Z. Estimated
shock velocity was 2000 km/sec. Associated with this sweep was
a B3/SF flare from Rgn 7704 (N14W39). No other significant
activity was observed the past 24 hours as the other spotted
regions, 7705 (N04W79) and 7707 (N00W63) continue their slow
decay.

Solar activity forecast: solar activity is expected to be very low.

STD: A full-disk Yohkoh x-ray image has been appended to this report showing the location and extent of the recurrent coronal hole expected to begin influencing the earth over the next 72 hours.

The geomagnetic field has been at quiet to unsettled levels for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be unsettled to active on day one of the forecast period with day's two and three experiencing mostly active to minor storm conditions. A favorably positioned recurrent coronal hole is expected to produce this period's geomagnetic activity. Storm conditions are expected to persist well beyond the forecast period.

Event probabilities 29 apr-01 may

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01

Major-Severe Storm 05/15/15

B. High Latitudes
Active 25/30/30
Minor Storm 30/40/45
Major-Severe Storm 10/20/25

HF propagation conditions were normal over all regions. Similar near-normal conditions are expected on 29 April, although high and polar latitudes, particularly transpolar and transauroral circuits, may begin to experience increased signal degradation as the leading edge of a proven geoeffective coronal hole related disturbance begins to impinge on the Earth. Conditions are expected to rapidly deteriorate to levels where frequent useless periods are expected for transpolar and transauroral circuits on 30 April and 01 May. Middle latitudes during this time are also expected to become moderately to periodically strongly degraded. Low latitudes will be less affected, but will not escape the effects of the activity altogether. Generally fair propagation is expected over these paths. No improvements are expected for at least the next week following the arrival of this disturbance.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SPECIAL INSERT: CURRENT X-RAY EMISSIONS FROM THE JAPANESE YOHKOH SPACECRAFT
==

|_____________________________________________________________________|
```

CONFIDENCE LEVEL: 65%

NOTES:
Predicted geomagnetic activity is based heavily on recurrent phenomena. Transient energetic solar events cannot be predicted reliably over periods in excess of several days. Hence, there may be some deviations from the predictions due to the unpredictable transient solar component.

60-DAY GRAPHICAL ANALYSIS OF GEOMAGNETIC ACTIVITY

Chart Start: Day #060
```

NOTES:
The 10.7 cm solar radio flux is plotted from data reported by the Penticton Radio Observatory (formerly the ARO from Ottawa). High solar flux levels denote higher levels of activity and a greater number of sunspot groups on the Sun. The 90-day mean solar flux graph is charted from the 90-day mean of the 10.7 cm solar radio flux.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

1322. FCC Computers

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-29 09:39:33 UTC
From: P.Lucas@mail.nerc-swindon.ac.UK
Message-ID: <9404290939.AA50999@swmis>
Source record: 267857

Someone said:-

: Silly question..... with 12+ week delays etc, and thinking of the
: phone bills generated by having to phone ARRL, VEC etc for permission
: before phoning the FCC, would it be worthwhile for US amateurs, VECs and
: the ARRL to raise funds for a modest PC with a moderately big disc and
: volunteer-written software, and then *GIVE* it to the FCC as a donation ?

Why not try and get Congress to agree to decouple the 'technical' and
'administrative' activities of the FCC? In other words, contract out the
bureaucratic part [handling license paperwork] from the rule-making part
of FCC activities.

I am sure there are plenty of US companies that would be prepared to bid for the
contract to issue [all forms of] radio licenses on behalf of the FCC.
Remember: it is hard to get a Government department fired for inefficiency,
but it is possible for a private contractor not to get their contract renewed.
This fear of loss of business can concentrate their minds wonderfully!

This is what happened in the UK; for the last couple of years the issuing of ham
licenses has been handled on behalf of the DTI by 'Subscription Services Ltd',
a division of the British Post Office. The DTI are in the act of re-tendering
for the contract at the moment - see advertisements in the UK ham press.

Peter J.M. Lucas NERC Computer Services Swindon England.

It always takes place on New Year's Eve. And it's still quite
popular. Details usually appear in the October or November QST.

Several people have posted recently requesting information on radio modifications for the disabled radio enthusiast.

The May issue of Monitoring Times has an article that includes several addresses of organizations that will help.

I haven't read the article yet - so that's all I know right now.

CT9 is a commericial offering by K1EA Software and Harvard Radio, Inc.
Version 9 will be available for the first time at Dayton.

There is a mailing list devoted to discussion of K1EA's CT software:

CT-USER@mlo.dec.com

Send a message to CT-USER-REQUEST@mlo.dec.com to get information about
subscribing.

There was a posting to the CT-USER within the last month or so
describing CT9 features and costs, etc. There is an archive of files
and old mail messages available when you join the CT-USER list.

I was reading the Field Day rules in this month's QST. It appears as
if Field Day is theoretically open to only hams who are "members of
the "ARRL/Canadian Field Organization". Does this mean that only
Canadian hams and members of ARRL are (in theory) participants in
Field Day? The rules specifically indicate that "Foreign stations may
be contacted for credit, but are not eligible to compete." I always
thought that Field day was an International affair!

* AMSAT-UK COLLOQUIUM NEWS *
============================
AMSAT-UK Colloquium Call for Papers

The ninth AMSAT-UK Colloquium will be held July 28, 29, 30 & 31 at the University of Surrey in Guildford, Surrey (England). This year's colloquium will be divided into four primary topic areas: Spacecraft Engineering, Future Space Missions, Groundstation and Spacecraft Operations and Associated Amateur Space Activities. Papers falling into these categories are sought for the event. Authors should submit abstracts to arrive no later than May 10, 1994 for consideration for this year's event. Papers accepted for this year's proceedings will be required in final form (camera ready or on disk) no later than June 10, 1994. Authors will be notified of paper acceptance by June 1.

Abstracts should be sent to:

Doug Loughmiller, G0SYX
AMSAT-UK Colloquium Programme Chairman
University of Surrey
Centre for Satellite Engineering Research
Guildford, Surrey
GU2 5XH
England

Submissions can also be made to the programme chairman via fax on +44 0483 259503 or via the Internet to: D.Loughmiller@ee.surrey.ac.uk. Abstracts and papers should only be sent to the addresses listed above.

The annual AMSAT-UK Colloquium is the largest international gathering of amateur satellite enthusiasts and experts in the world and has established a high standard of quality presentations on topics relevant to the amateur satellite community. Organizers of this year's event would welcome all

contributions of program material covering the vast scope of the amateur satellite program as it exists in 1994. The ninth AMSAT-UK colloquium promises to be the most informative and entertaining event yet. We look forward to your participation in this year's Colloquium.

* SAREX NEWS *
==========
The following message from the STS-59 crew was received via SAREX by Dave, N6JLH in California:

We used the SAREX rig today to talk with 2 of our astronauts now stationed in Star CIty, near Moscow, and 2 cosmonauts. One of the astronauts was my friend and former STS-37 crewmate, Ken Cameron, R3/KB5AWP. Ken also got me into ham radio. It was terrific to hear his voice after several months corresponding by e-mail only! Linda, N5RAX and I and crewmate Kevin Chilton spoke to Ken and the cosmonauts including U6MIR, Anatoli Artsibartski, on two succesive orbits. What a great way to use ham radio!
They were standing near the Yuri Gagarin statue, using an HT with a 5/8 whip, standing on a car to increase their elevation!

73, Jay N5QWL 01:10 UTC 17 April 1994

* VE7BQH MAKES DXCC ON 144 MHZ *
==========
Heartiest congratulations to Lionel Edwards, VE7BQH, on becoming the fourth radio amateur to receive a DXCC award for 144 MHz, reported in May QST. What's more, Lionel did it with an antenna having forward gain of approximately 23.7 dBd, about 5 dB smaller than that of anyone else to have reached this exalted level of VHF DXing (so far, W5UN, KB8RQ and SM7BAE). The 336-element collinear array at VE7BQH is rotatable in the Z axis (polarization) as well as the normal X and Y axes (azimuth and elevation), which accounts for some of Lionel's outstanding results; his own operating ability, dedication and persistence over many years obviously contributed as well.

VE7BQH is perhaps best known as the ever-patient, ever-helpful net control station, premier technical advisor and chief schedule-arranger of the 2-meter EME Net, which meets each Saturday and Sunday on 14.345 MHz, a role he has filled without peer for many years. It's fair to say that without Lionel, 144 MHz EME would not have become anything like what it is today, and none of those using the mode could possibly have accomplished even a fraction of what they have done so far.

Congratulations, Lionel, thanks for everything and please keep up the great work you're doing for all of us!

* GARC WORLD WIDE WEB SERVER NEWS *
==========

The NASA Goddard Amateur Radio Club, Inc. in Greenbelt, Maryland has been working behind the scenes on projects that may benefit all amateur radio operators in general and perhaps AMSAT members in particular.

Astronaut Ron Parise, WA4SIR, has been beta testing a BBS which is accessible via the Internet through telnet and ftp, telephone modem, and packet radio (locally on 145.090 MHz and nonlocally through "packet wormholes"). With Ron's heavy STS-67 crew training as of late, Jim Blackwell N3KWU is picking up much of the work to complete the beta phase.

The BBS contains Keplerian orbital elements updated daily, AMSAT bulletins, SAREX bulletins, club member mail service, club announcements, space shuttle mission info and lots more.

Access via Internet: wa3nan.gsfc.nasa.gov or 128.183.105.17
via landline: 301-286-4137
via packet: see above parenthetical

Additionally, the Goddard Amateur Radio Club has a home page for public viewing on the GARC World Wide Web server. It contains the latest GARC Newsletter in electronic form, latest space shuttle keps, GARC calendar of events, details of upcoming club activities, current WA3NAN QSL card, club facility-repeater-BBS info, a morse code experiment and more.

WWW access URL:
http://macgwy-mac2.gsfc.nasa.gov/garc/wa3nan-home-page.html

The GARC Web server was developed and is maintained by club president Jim Blackwell N3KWU (n3kwu@amsat.org). You are invited to check out its potential. This medium is the hottest item on the Internet today.

Source record: 267595

Hallo!

Ich bin auf der Suche nach einem 2. KW-RX fuer den 2. Wohnsitz :-)...
Nach allen Recherchen bzgl. bezahlbarer und trotzdem sehr guter Geraete
bin ich nun beim YAESU FRG-100 haengen geblieben...

Wer von Euch besitzt so 'ne Kiste und kann mal was ueber seine positiven /
negativen Erfahrungen schreiben?

Ist der FRG seinen Preis wert?

Schnell noch was zu den Anwendungen:
Reines Hoeren von Radiostationen, DX, Amateure auf SSB, vielleicht noch
ein wenig CW und Zeitzeichen/Seefunk, aus.
Kein Packet, CCTY usw. - ist alles nicht so mein Ding.
Ich will auch moeglichst ohne Aktiv-Antenne arbeiten... schliesslich ist
es ein (eigenes) Haus, und da moechte ich schon mit Langdraht
rumbasteln...

PS: Wer mir hierzu Tips geben kann, immer her damit! Thanks!

So. Dann schreibt mal schoen...

Ciao! Ralph.

1337. 2TFD (Terminated Folded Dipole)

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-29 17:26:26 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9404291726.AA02038@tix.timeplex.com>
Source record: 267872

Does anyone have any experience with the 2TFD (terminated tilted folded dipole) antenna ?
I have in the past experimented with this antenna, but I'd like to try this one again. Some say it's nothing more than a radiating dummy load, but it does have some merit. There are articles about this topic in Tech Corr. May 94 QST, in "Practical Wire Antennas" an RSBG publication and in Jun QST 1949. It's not the most effecient, but does have merit for a reasonable compromise as a frequency agile antenna.

Does anyone out there in radioland have access to old QST's ? I'd like to get a photocopy of Jun 1949 QST pages 54-55.
What I'm trying to determine is what is the recommended antenna position angle with respect to the horizontal for best performance. In the RSGB book by G3BDQ, an angle of 30 degrees from the VERTICAL is recommended. This may be an error in that text. It seems as if it should be 30 degrees down tilt from the HORIZONTAL. Any ideas out there ?

It might make still more sense to turn the job over to the ARRL,
a la the proposal for Canada. India has ALWAYS used this system,
and so far as I know it has always worked well.

1340. ARLP017 Propagation de KT7H

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-29 17:40:38 UTC
From: marcbg@netcom.com
Message-ID: <$arlp017.1994@ampr.org>
Source record: 267736
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sbay.hams

ZCZC AP31
QST de W1AW
Propagation Forecast Bulletin 17 ARLP017
>From Tad Cook, KT7H
Seattle, WA April 29, 1994
To all radio amateurs

SB PROP ARL ARLP017
ARLP017 Propagation de KT7H

With steadily decreasing geomagnetic activity, HF conditions improved considerably last week. A indices dropped below ten and remained in the single digits. Solar activity was low, but the quieter geomagnetic conditions made propagation much better.

Unfortunately, a return to active geomagnetic conditions is forecast for the near term. Returning coronal holes rotating back into view on the solar surface are expected to throw HF bands into havoc over the next few days. Disturbed conditions should gradually decline after May 1, but may not reach normal until the middle of May. Solar flux should rise gradually, peaking near 100 around May 7 through 11.

Sunspot Numbers from April 21 through 27 were 53, 64, 54, 72, 60, 50 and 58, with a mean of 58.7. 10.7 cm flux was 86.7, 85.4, 85.2, 83.4, 82.8, 81 and 78, with a mean of 83.2.

The path projection for this week is a special Hamvention edition for Saturday, April 30 from the Hara Arena in Dayton, Ohio to Honolulu, Hawaii.

80 meters should be open from 0430 to 1130z. Conditions should peak around 0630 and remain strong until 1030. 40 meters looks good from 0400 to 1200, peaking from 0530z to 1000. Check 30 meters from 0300 to 0800, and again from 1100 to 1400. 20 meters should be open from 0100 to 0530. Check 20 again around 1500 to 1600. 17 meters may have an opening around 2000 to 2200. 10, 12 and 15 meters do not look good this weekend.

>Does anyone have any experience with the 2TFD (terminated tilted
>folded dipole) antenna ?

We used this antenna at SP8KIT in 1970s. Tuned well but the
performance was unspectacular. I think time for such antennas has
already passed.

In the past it was desirable to have antenna that could be tuned with
the Pi-filter, built into virtually every rig. If the antenna had
impedance much out of the Pi-filter range, the antenna could not be
matched or the second capacitor in the filter sparked. G5RV was one
of such antennas that usually worked fine with Pi-filters.

Now that almost everyone has an antenna tuner that tunes much wider
range of impedances than the Pi-filter, one cares more about smaller
losses. So eliminate that resistor in T2FD, substitute the coaxial
cable in G5RV by extending the ladder line etc.Perhaps the rule is not
universal. One has a resistor in rhombic antennas to attenuate one
direction.

Simple answer...when in Canada, do as the Canadians do. The USA/Canada
arrangement is one of automatic reciprocal licensing. That is, when
I go into Canada I simply operate according to all Canadian regulations
using my call/VE for the province you are in. As to frequencies and
limitations, you act as if (because you are) licensed as a Canadian
amateur. Thus, while in Canada you can operate voice in many
of the CW segments where voice is prohibited by US regs.

Whenever you visit another country and you are granted reciprocol
licensing privaledges (either automatically as per USA/Canada
agreement or by direct application and the granting of an actual
call for the country you are in), you operate under the rules of
operation for the country you are in.

Hope that answers the question.

My fire department is looking for used Motorola MT1000s, which I guess have been superceded by the HT1000. We need about three of them pretty quickly.
o cover 154 mHz region
o 16 channel w/ scan

We would also like to acquire the programming cable for these.

Bill,
I have five of the MT1000s that cover the 154Mhz region that you are looking for. They are 16 channel w/scan, just like you want. I also have sources for the programming cables.
I can sell the MT1000's for $850 each, including shipping. If you need the rapid chargers for them, I have them for $75.00 each. These radios are in EXCELLENT, LIKE NEW condition! If interested, leave message here or call me and send check or money order to me: Darryl Linkow

>"located in" the ARRL field organization.

I'm not sure. Here it is copied from p. 132 of May's QST. I hope
I don't get a letter from Mr. Imlay for this. :(

1) Eligibility: Field Day is open competitively to all amateurs in the
ARRL/Canadian Field Organization (plus Yukon and NWT). Foreign
stations may be contacted for credit, but are not eligible to compete.

==========

Are US hams who are not ARRL members "in" the ARRL field organization?
If so, wouldn't the phrase "US/Canadian" be more appropriate? It
certainly appears to me as if all Canadian hams are eligible but only
US hams who are ARRL members can compete.

THE SKN (straight key night) is New Years Eve. However, There is a
newer, more frequent version of SKN that has been largely
taking place every (well, maybe only 'many') Friday nights,
starting variously around 0400 UTC (earlier in the
winter) on 80 and 40 meters in the Novice subbands (3702
and 7102 khz). The emphasis is both to encourage the use of
straight keys, and to engender interest in the use of Morse,
elmering people, and the general gathering of people interested
in "low-key, relaxed community" on amateur radio. Besides, why
just wait until New Years Eve? Straight keys can be used more
often than that! The hope is that you'll converse, tell yarns,
and just sit back and enjoy (plus maybe exercise that arm).

Try it. Get on and call CQ CWIST DE YOURCALL K and tell a story.

Unfortunately SKN occurs on New Year's Eve which is why I've only participated
once. Any nite or day can be Straight Key for me however, since that's all I
have to send with anyway.
Maybe we could have SKN on Monday, Bug nite on Tuesday, Paddle nite on Wed.
and Keyboard nite the rest of the week since that's what most seem to be
using now.

>The police used to monitor CB, even the PA state police had signs
>on the turnpike that they monitored CB ch 9. Baloney!

In Oregon the State Police used to have bumper stickers that say
something like "Monitor CB ch. 9, 17, 19" Of these, channel 17
would be your best bet. Its the Interstate 5 truckers channel and
is used on other roads as well. In the metro areas 17 is full of
Mud Ducks, echo boxes, and other weirdos. I assume the truckers
just turn off their radios when passing through. Out in the country
its much better behaved and you will be assisted promptly if you
are sincere.
Nobody seems to listen to 9 because its really boring.
I take a CB along when traveling away from populated areas because
there are so few hams out there in the boonies that even if you can
hit a repeater there won't be anyone listening.

>Is there a "standard" simplex emergency freq on 2m, 220, or 440?

Try 146.52, 223.50, 446.0 I can often raise someone on 146.52 while
on road trips but I wouldn't count on it and certainly not the others.

1356. RFI proofing my computer?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-30 00:00:22 UTC
From: ez045506@dale.ucdavis.edu
Message-ID: <Cp1pCM.Dy2@ucdavis.edu>
Source record: 267753

I would like to be able to use my computer along side, or in close
proximity, to my HF, and VHF, equipment but have a problem with RFI
(radio frequency interference). What are the most efficient methods
for reducing RFI.

I have 486DX2 50 MHz, Super VGA monitor, and a laser printer.
All equipment is less than two years old and presumably well shielded.

I'd like to be able to use my computer while I'm on the air, logging,
packet, etc..., but the RFI is killing my reception on both HF and VHF.

Any suggestions?

Timothy McNulty N6HFS tjmcnulty@ucdavis.edu

1357. FT-41R weirdness

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-30 01:11:38 UTC
From: kennish@kabuki.EECS.Berkeley.EDU
Message-ID: <2psb8a$snv@agate.berkeley.edu>
Source record: 267758

Hi all -

I just acquired a new Yaesu FT-41R, and it exhibits a very
bizzare problem with a local repeater. When using the repeater,
the audio drops out intermittently. The repeater output carrier
stays on. Specifics:

1) The repeater needs a PL tone.

2) The audio on the input to the repeater (output of the unit)
doesn't drop out, nor does the PL tone drop out as verified
by my FT-530 in Tone Squelch mode.

3) The audio is "hot" on the FT-41R.

4) Unit has been checked for loose connections, weirdness like
that.

5) I am hitting the repeater with a good signal -- when the
audio is there, it is full quieting.

My weird analysis:

The "hot" audio is causing the PL tone to distort and/or get clipped
by the voice, and is causing the local repeater to drop audio.
(I don't know what would cause the repeater to drop audio but
keep carrier -- I have asked the owner, but no reply yet....)
Thus, by backing off the deviation, this should be fixed.

Before I go and play around with the insides, anyone else have
any other possible explanations for this weird phenomena?

Thx in advance,

Ken

1358. Vertical Antenna Recommendations?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-30 02:25:59 UTC
From: jkane@netcom.com

RG> but have been getting comments that my audio is weak. I've heard
RG> rumors that this is a common problem with the 202. Can it be fixed or
RG> should I just learn to live with it?

It can be fixed. Go to your local Radio Shack store and order the
service manual (aprox. $4.00) and locate the deviation adjustment.
Increase this adjustment very slowly until you get the audio quality you
desire.

The inital adjustment is set for aprox. 3.5 KHz. If you have the proper
test equipment you might want to set it to about 4.5 KHz.

1363. Batteries for Kenwood TH-78A

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-30 04:32:22 UTC
From: mrw13@namaste.cc.columbia.edu
Message-ID: <2psn0m$h5n@apakabar.cc.columbia.edu>
Source record: 267584
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I finally decided on buying a Kenwood TH-78A and am now considering which batteries to get with it. There are actually a couple mail order places which will ship the radio with a battery besides the standard PB-13. This is how the three main Kenwood batteries compare:
PB-13 Standard 7.2V 700A 2.5W on High Power (approx. 4.5 hrs.)
PB-17 High-Power 12.0V 700A 5.0W on High Power (approx. 3.0 hrs.)
PB-18 Long-Life 7.2V 1100A 2.5W on High Power (approx. 7.0 hrs.)

There is also the BT-8 battery case which takes 6 AA batteries; what kind of output (in watts) does this provide for and how long will it last?

Additionaly, how about batteries that fit the Kenwood but are made by other manufacturers? I'm specifically looking for a "long-life, high-power" battery. Any suggestions/recommendations out there? Thanks very much.

Mike,
What you are descrbing is known as "talk off" where the transmitter limits the audio on voice peaks, causing the ctcss to be sent at a reduced level. Turning the deviation down (mic gain, etc) on the radio may help.

Good Luck

Has anyone had any experience (either positive or negative) with
the OUTBACKER MOBILE ANTENNA? I am considering installing an HF
rig in my Taurus along with an all-band mobile antenna.

Your comments and suggestions about this antenna or any other
easily-installed, low-profile all-bander would be appreciated.
Please include the type of mount you are using. I am looking
for a non-permanent mount which will not scratch the car.

Thanks and 73.

1370. Spectrum Show 30 Apr 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-30 13:34:51 UTC
From: bigsteve@dorsai.dorsai.org
Message-ID: <h1bmjGG8y9O1057yn@dorsai.dorsai.org>
Source record: 267777
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc,rec.radio.scanner,alt.radio.pirate

This is to let everyone know that my news segment on the Spectrum program that was heard via WWCR/5810Khz, on 4/30/94, (US Time), was originally prepared for the previous weeks program. It, and all the other segments, were delayed one week by an arbitrary management decision to present a "listener appreciation" program last week.

This means the news item, (IL scanner bill), is definately out of date. We were not able to update the report since Dave was in Dayton.

The prerecorded segment also states that we will be taking more entries to rename the segment. Sorry, but due to commitments next week, I will not be able to extend it, it ended on its original schedule, today. The winner is Dave Chapchuk who snail mailed in the suggestion SPECTRUM ANALYSIS.

- - -

Here is a hardcopy of this weeks Spectrum Analysis.

Well it seems appropriate that for our first commentary we will be discussing Bootleg radio. Now we've been calling it Pirate radio for the longest time, but when you get down to it, it has had numerous names over the course of time. The latest attempt to rename illegal broadcasting is Micro Radio.

As the name implys, Micro Radio means low power operations, usually 10 watts and under. Unlike Pirate Radio as we know it, Micro Radio is being touted more as a political entity, not the "for fun" and ego-tripping form that Pirate Radio is. The chief advocate of Micro Radio is Stephen Dunifer, a former guest on this program. Dunifer is a product of 1970's Berkley, California, where he still lives and is considered to be a former political radical.

A few weeks ago Dunifer published what I consider to be his manefesto on the Internet called, Take Back The Airwaves. While I didn't agree with some of what he said, it did inspire about 50 comments by other users that discussed many of his ideas. The ideas covered everything from how licensed broadcast stations are playing to the largest audience to get the most money and have no intention of serving the minority interest of the community to how Micro Radio would be a true democratic representaion of the populace.

One of the repliers was Bob Smith, the host of a radio talk show on a Rochester, NY, AM station who was interested in finding out more about the various aspects of Micro Radio. Instead of being welcomed as a possable supporter of the idea, within the media, he was blasted by one individual who claimed that Bob was part of the problem. The poster went on to

further say that Bob was reaching his audience, but the poster wasn't because he did not have the money to buy a station. Bob was further ripped for having an audience which meant the owners could sell the advertising time, which meant that Bob could continue to reach his audience and the advertisers would buy more time. The poster went on to say that Bob was monopolizing the airwaves and had the nerve to solicit suggestions on how to make his air time more useful.

Sound familiar? No? Well does the old, "you are a tool of the establishment" argument from the 1960's ring a bell? How about the, "It's people like you who are continuing the war," statement? Good Lord, I though we were finished with this self righteous, radical, flower-power trip a generation ago, but I see the attitude has manefested itself in another way. Comm'on folks this is the 90's, not the 70's, the revival of Hair is on the stage, it shouldn't be in the streets too.

Now as one who is a former staffer of politically orented broadcaster, Radio New York International, I should talk, right? Yes, I was there during the Liberal period of Randi Steele and the "Dump Bush" time of Pirate Joe, but this attitude is childish. It is an attitude that is a detrement to Micro Radio. Hasn't anyone learned the lesson of RNI?

You can't lobby politicians by saying I want the 10 watt Class D station license reinstated so I can hear Joe Shlamengie talk, if Joe Shlamengie is on the FBI's list of subversives. In the words of the hippie generation's troubador, John Lennon, "But if you're going to carry picture of Chairman Mao, you ain't gonna make it with anyone, anyhow". It's time to really put the idea of community radio back in the hands of responsable parties. Even the most liberal of congressperson is not going to open a pandora's box of supporting licenses on the idea of it being a 1st Ammendment right of the individual.

If you want to start a movement for the issuance of these low power licenses, a community radio broadcasting band, or any other type of local communication facility, then it's time to put your support behind responable community agencies. Outreach programs, neighborhood youth and senior centers, churches and temples, support groups, chambers of commerce, and even the local High School; they are all the kinds of public institutions that would be the most politically acceptable to operate these Micro stations. Joining, supporting, and convincing these institutions that Micro Radio could be a way of extending itself out to the community is the way to go in my opinion.

If you were to ask those politically radical individuals of the 1960's and 70's, you'll find that most of them, people like Abie Hoffman, Tom Hayden, and even Jessie Jackson, decided to work within the system to bring change. Being a radical, especially when trying to tackle the FCC, is not going to make it with anyone, anyhow.

>Canadian hams and members of ARRL are (in theory) participants in
>Field Day? The rules specifically indicate that "Foreign stations may
>be contacted for credit, but are not eligible to compete." I always
>thought that Field day was an International affair!

Nope; Field Day is pretty much strictly a US/Canada event. It's not really a contest, per se, as the whole idea is to encourage operating under less than optimal conditions -- battery power, solar power, generators, and the like. The competitive aspect is as much to see how your emergency setup works under different conditions as it is just fun.

From: mark@icsbelf.co.uk
Message-ID: <Cp32FL.n1q@icsbelf.co.uk>
Source record: 267587

Super-Duper IOTA is a shareware version of EI5DI's popular contest logging program. It includes all the features of the full HF version, except that only one contest type (IOTA) is supported.

The program is designed for ease of use, and requires the minimum number of keystrokes to log each contact, as well as instant duplicate checking, automatic scoring and multipliers.

You are encouraged to use this program FREE, and if you like it and wish to upgrade to the full version, follow the instructions included in the package.

I have uploaded sdi537.exe to /hamradio/packet/tcpip/incoming on ucsd.edu.

1375. Ni-Metal-Hydride batts for handhelds?

Newsgroup: rec.radio.amateur.misc
Date: 1994-04-30 18:15:56 UTC
From: garland@ohstpy.mps.ohio-state.edu
Message-ID: <1994Apr30.141556.4595@ohstpy.mps.ohio-state.edu>
Source record: 267589

Does anyone know whether any hand-held transceivers come with NiMH batteries, instead of NiCads? Also, do any aftermarket battery manufacturers make NiMH batteries. My understanding is that the power capacity is greater in NiMH batteries and that they don't have a "memory" effect -- both of which seem highly desirable traits for a handheld. Thanks

Jim W8ZR

1376. FT-530 Mod Made Easy?

Newsgroup: rec.radio.amateur.misc

From: murl@delphi.com
Message-ID: <J6ztUmY.murl@delphi.com>
Source record: 267588

I recently purchased a Yaesu FT-530. When I bought the radio the dealer gave me a MOD sheet for the expanded receive. When I started to make the mod I found that the circuit board layout was not the same as the drawing on the mod sheet and that there is a loop of wire on what I think is pad 13. If this is pad 13 it looks like simply cutting the wire will accomplish the mod. I did not try this since I am not sure that this is the right pad. Has anyone else seen this layout? Can the mod be done by cutting the wire?

Here is a rough drawing of the circuit pads:
(This is from memory. I already closed up the case.)

Subj: How to autopatch? Conf: (3) Rec_Radio_
___--------------------------------------------------------------------------
CP> I just passed my technician exam and waiting for my license to show up in
CP> mailbox. I was wondering how a autopatch connection can be
CP> made? (Of course, I
CP> know I cannot transmit until I receive my callsign)

Autopatches can work differently on different repeaters. My advice is to
get in contact with the Control OP of the repeater(s) you wish to use and
ask him/her how it works.

Here in the Raleigh, NC area, we have *open* and *closed* autopatches.

Open patches require no access code to use them and are available to
anyone.

Closed patches require an access code and are usually "closed" to all
except the members of the club that sponsers the repeater. You are given
the "code" when you pay your dues.

One final note....

Our club repeater(s), we have 2, one on 2-meters and one
on 440, are of the *open* viriety but they both work just a little
differently from each other but we will give out these instructions over
the air to any one who askes. However as a Control OP of our repeater(s)
and an officer of of our club, I strongly recomend you DO NOT try to
access the autopatch whether it is open or closed "just to see if you can
do it" until after your license comes in, you never know when records are
being kept and tape recorders are going.

Good Luck,

Bill, KD4LLQ
Raleigh, NC

BOSTON AMATEUR RADIO CLUB ANNOUNCEMENT

FOR IMMEDIATE RELEASE
FROM: Phil Temples, President

FOR FURTHER INFORMATION, CONTACT: Bob Salow, WA1IDA
Tel: (508) 650-9440

APRIL 27, 1994

ASSISTIVE TECHNOLOGY FAIR: HAM HELP NEEDED

Ham help is needed for the "Assistive Technology Fair" to be held on Thursday, May 26, 1994 at the Hynes Auditorium in Boston.

Hams will assist by providing communications for volunteers who will render assistance to the disabled attendees. The event will require a time committment from 8:00 a.m. until 5:30 p.m.; however, individual assignments could be divided into two shorter shifts if need be. Hams are required to have two-meter handheld equipment with extra batteries. Assignments will place hams at various locations in and around the Hynes, as well as at outside locations, parking garages and T-stops.

Presently, 15-20 individuals have volunteered to assist. According to BARC Public Service chair Bob Salow, WA1IDA, "more than 50 hams" could actually be used for the Fair, which will be attended not only by manufacturers and vendors of high-technology equipment, but also by disabled persons and the agencies who serve them.

It is anticipated that hams will be provided with free parking at the Prudential parking garage.

If you can assist in this important event, please contact Bob Salow, WA1IDA <erc@world.std.com> at (508) 650-9440 as soon as possible.

Archive-name: radio/rec-radio-info/welcome
Last-modified: $Date: 1994/01/02 22:00 $
Version: $Revision: 1.06 $

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source
of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group and
to news.answers every two weeks. You are now reading the first article, which
explains what rec.radio.info is, and answers some Frequently Asked Questions.
The second article is titled "Submission Guidelines", and you only need to
read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with
a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit
chat about radio. Rec.radio.info will contain informational, factual articles
only. Follow-ups are redirected to an appropriate other group, and further
discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it
was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered
presentation in rec.radio.info (even with cross-posting, only one message, with

a unique Message-ID, is propogated across the net). This tag also facilitates a pre-existing method of dropping or cancelling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:
/Newsgroups:.*[,]rec\.radio\.info/h:j
either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:
rec.radio.info:!s/:^
in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:
sequence
rec.radio.info
rec.radio.
at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, I will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for disussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is Mark Salyzyn. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@ve6mgs.ampr.ab.ca

Comments, criticisms, suggestions or questions about the group can be e-mailed to:
rec-radio-request@ve6mgs.ampr.ab.ca

But before you do so, please be sure to check out the "Submission Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. I receive information in my mailbox; I then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap (or possibly comp.newprod) may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, I would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. I

reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all I can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

brian@UCSD.EDU (Brian Kantor) has kindly supplied a mail list server for rec.radio.info. Non of the articles will be digested, due to their size, so you will receive individual mailings for every article posted to the group.

Mail sent to radio-info@ucsd.edu will be forwarded to the moderator and thus is an alias to rec-radio-info@ve6mgs.ampr.ab.ca

To subscribe and unsubscribe via the listserver; the format for that is

sub address radio-info
unsub address radio-info

where 'address' is your full mailing address. Send this request to

listserv@ucsd.edu

Note that the server will automatically delete any address that bounces mail. If you leave the address portion blank, it will try to deduce your address from the mail headers. This may not work if you are on bitnet, milnet or some other non-Unix host, so it is recommended to put your return address in any case. For example:

sub mymailbox@myhost.mydomain.mil radio-info
or
sub MEMEME01@DMBHST.bitnet radio-info

or something like that.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. Still firming up details at the moment but here is a preliminary list:
- unbc.edu as maintained by Lyndon Nerenberg <lyndon@unbc.edu>
- nic.funet.fi maintained by Risto Kotalampi <rko@cs.tut.fi>
saved to /pub/dx/text/rec.radio.info currently stored as numbered files.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for news.answer. This requires co-operation and good will to be beneficial to the community in the rec.radio hierarchy.

I suggest reading the posting guidelines for more information. I am open to suggestions.

I thank the following individuals for their input into this article:
rec.music.info moderator Leo Breebaart rec-music-info@cp.tn.tudelft.nl
rec.radio.broadcasting moderator Bill Pfeiffer wdp@gagme.chi.il.us
Paul W. Schleck, KD3FU pschleck@unomaha.edu
Ian Kluft, KD6EUI ikluft@uts.amdahl.com

1380. Re: PacketCluster Commands

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-01 03:42:14 UTC
From: rwilkins@ccnet.com
Message-ID: <2pv8em$b8i@ccnet.ccnet.com>
Source record: 267591

Michael Orland (1michael@netcom.com) wrote:
: Where can I get a complete list of DX PacketCluster commands for version
: 5.4-47 or a similar version? Thanks.

You should be able to find the commands file in the file directory
section of any fully implemented PacketCluster.
If not leave the sysop a request. As the packet cluster polling system
is not robust you should not download files during a major dx event.

Good DX

Bob

garland@ohstpy.mps.ohio-state.edu (JIM GARLAND) writes:

>Does anyone know whether any hand-held transceivers come with NiMH batteries,
>instead of NiCads? Also, do any aftermarket battery manufacturers make NiMH

First, let me answer the actual question since I have yet to see any
reply on this one. Yes, there are HTs which come with NiMH batteries.
The ones I have read brochures on are the Motorola Visor series HTs, they
are small like the size of the new tiny ham HTs but NiMH is standard issue.
They are available in high band VHF, UHF or 800MHz trunk.

>batteries. My understanding is that the power capacity is greater in NiMH
>batteries and that they don't have a "memory" effect -- both of which seem

True but read others' comment about the down side too. NiCds memory effect
is not as bad as it seems although it can happen at a very minor level.

>highly desirable traits for a handheld. Thanks

I'd want them for the higher capacity per weight/size and I am not
too worrying about self-depletion since I mostly can charge them every
night. The not so desirable side is higher price and that's why it is
not in the ham market as standard issue first. Third party should make
them but I've not seen them. Chargers (rapid) have to be different than
for NiCds.

>else seen this layout? Can the mod be done by cutting the wire?

Just out of curiosity, what is the serial number of your unit? The third
and fourth characters indicate the manufacturing lot number. My radio
came from lot #16 and had to have a small solder bridge removed. It
is possible that Yaesu may have put a small wire in place due to the
difficulty in working in such a tight area. If your radio is from
a lot greater than 20 (the last one I am familiar with) I would guess
that is what the wire is. My unit has no such wire anywhere in it.

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.6 12/26/93 15:45:09
Changes: Added new index file, Gopher, WWW, and WAIS entries

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described at the end of this article.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called USSTRATCOM) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
treaty.

Since in many cases hams are writing "the book", there is often no
"book" or other established reference for a beginner to refer to.
Traditionally, information has been passed on from ham to ham via word-
of-mouth. Like many of the traditional crafts, a variation of the
Master-Apprentice system has emerged, the Elmer-Novice relationship.
Called "Elmers" because they are usually older and wiser, having the
```

benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion posting to this message, "Amateur Radio: Elmers Resource Directory." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites, all at standard port 70:

cc1.kuleuven.ac.be
jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl

see also comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available from the following WWW site:

URL: http://www.cis.ohio-state.edu:80/hypertext/faq/usenet

under pages:

radio/ham-radio/elmers/admin
radio/ham-radio/elmers/index
radio/ham-radio/elmers/list
radio/ham-radio/elmers/diff

see also comp.infosystems.www

7. Wide-Area Information Service (WAIS): The latest copy of the list should be available from the WAIS server at rtfm.mit.edu (standard port 210) in database "usenet."

see also comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

--
73, Paul W. Schleck, KD3FU

pschleck@unomaha.edu (personal mail)
elmers-request@unomaha.edu (Elmers List administrivia)

* Possible origins of the word HAM:

The acronym "Home Amateur Mechanic" or...

from the Cockney pronunciation of "L'amateur" or...

the initials of the founder of the American Radio Relay League, Hiram Maxim, W1AW (his actual middle name being Percy apparently notwithstanding) or...

from the call letters of one of the first amateur stations at Harvard, H.A.M. (please, no flames from W1XM at MIT)

Dale Mosby, N7PEX, offers the explanation that HAM must stand for "Hardly Any Money," considering the investment one could make in the hobby.

Knowledgeable individuals from the American Radio Relay League (ARRL), and other radio historians, seem to agree that the terms "Ham" and "Lid" (an inept operator) both originated with landline telegraphy. A "Ham" was a show-off and a "Lid" was a telegraph operator so inexperienced, he had to use a pot or can lid to rest his telegraph sounder on to properly copy the code.

As an interesting historical footnote, early telegraph operators may have been the first to experience the infamous curse of our communications age, Repetitive Stress (or "Carpal Tunnel") Syndrome (called "Glass Arm" in those days, which encouraged the invention of the semi-automatic or "bug" key).

(Larry E. McDonald, N6ZMB, wrote to point out another plausible origin, which doesn't necessarily contradict the ARRL version. The term "ham" may have been derived from "ham-fisted" or "ham-handed" to describe poor telegraph operators who were hired from the ranks of radio operators. Or maybe "ham-fisted" and "ham-handed" are derived from "ham." Who knows?)

1386. AEA Log Windows and ICOM

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-01 14:39:45 UTC
From: jfreedmn@hebron.connected.com
Message-ID: <2q0evh$ef@hebron.connected.com>
Source record: 267601

Has anyone else out there installed AEA's new Ham Windows program
with an ICOM radio? For the most part it is an EXCELLENT piece of
software, however, I cannot get it to read and control my IC-751A.
I have done the necessary LOGWIN.INI change to communicate at
9600 Baud, however, stll get timout and non-communication errors.

Any assistance or other observations/solutions regarding the
program or this problem would be appreciated.

PLEASE RESPOND HERE - NOT E-MAIL. Our servers mail directory croaked.

1387. Re: RFI proofing my computer?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-01 14:56:26 UTC
From: co128@cleveland.Freenet.Edu
Message-ID: <2q0fur$f7v@usenet.INS.CWRU.Edu>
Source record: 267602

First you have to determine the source of the RFI (computer, monitor, printer, cabling). Disconnect everything and start plugging in one unit at a time. If its cabling there are ferrite products you can buy to wrap around them. If its radiating directly through the enclosures, that's a problem. The next question is how is it getting into the rig. When the antenna cable is disconnected is the receiver clean? If so, is there a leak in the coax or is the antenna right over your head? Proximity is a killer here. It maybe be the best your can hope for is a reduction and not an elimination of this problem.

1388. IC-02AT

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-01 15:09:18 UTC
From: Adrien_Glauser@magic-bbs.corp.apple.com
Message-ID: <1994May01.100918.834224@magic-bbs.corp.apple.com>
Source record: 267603

I've heard that the IC-02AT can have it's Rx expanded from 140-151MHZ to 140-165MHz. Is this true and if so how is it done? I want to start listening in on the Marine band as the fishing season will soon start.

1389. Re: Canadian Reciprocity

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-01 16:22:38 UTC
From: drt@world.std.com
Message-ID: <Cp4tHr.Cwz@world.std.com>
Source record: 267604

Jay Brown (un111@freenet.Victoria.BC.CA) wrote:

: I recently moved to Canada from Kansas, but am unsure of
: the reciprocity issue. I have a General Class U.S. license (N0LKI) -- do I
: have the same privileges (band and emission limits, etc) here in
: Canada as I would in the states?

No, that's a myth. You have more privileges.

: There're probably other ways to find this information, but
: I had to leave most of my library, including most amateur books,
: back in the states.
: Thanks for any help, either posted here or e-mailed to me.

This question generates so much more heat than light, I prepared a
FAQ on the issue.

FAQ: US Automatic Reciprocal Operation in Canada

Q1: I have an FCC-issued amateur license. What do I have to do to
operate an amateur radio station in Canada?

A: A reciprocity treaty, TIAS 2508, provides for US-Canada reciprocal
operation of amateur radio stations. No application, registration, or
fee is required. You are automatically eligible to operate in Canada
if all three of these conditions apply:

1. You have a valid FCC-issued license;
2. You are a US Citizen;
3. You are a resident of the US (if you're not a US resident,
please direct your questions to a Canadian official. As I
understand it, if you become a Canadian resident, your US
license is good for a while, but they expect you to get
a Canadian one eventually).

(GR2.45.1.a, RIC-25 p. 9)

Q2: What privileges do Canadian operators have?

A: Legally, Canada has no separate phone band or other mode
restrictions. Instead, they adhere, on a voluntary basis, to a
bandplan, similar to the way we use 160 meters. (The IARU Region 2
bandplan can be found in Chapter 2 of the ARRL Operating Manual.)
Canadian amateur bands are the same as those in the US up through 1.2
GHz, except they have all of 220-225 MHz, and they only have 430-450
MHz. There are, however, bandwidth limits (-26 db):

160, 80, 40, 20, 17, 15, 12 meters: 6 kHz maximum bandwidth
30 meters: 1 kHz
10 meters: 20 kHz
6, 2 meters: 30 kHz
220: 100 kHz
440, 902: 12 MHz
1.2 GHz and up: none specified

(Schedule II, RIC-25 p. 15)

Q3: What privileges am I allowed while operating in Canada?

A: All foreign amateurs, including those from the US, are assigned reciprocal privileges according to the Morse Code speed needed to qualify for their license:

12+ wpm: All "Advanced + 12" privileges
(i.e., *all* Canadian privileges)

[US General, Advanced, Extra Class]

5-11 wpm: All privileges above 30 MHz,
PLUS CW and CW only on all bands below 30 MHz;
limited to Basic privileges [*]

[*] *Canadian* Basic + 5 wpm licensees are allowed full access above 30 MHz, plus (full) access to 80 and 160, only. However, the above *is* what the rules say about *foreign* amateurs operating in Canada.

[US Novice Class, Technician + 5 WPM code]

0-4 wpm: All privileges above 30 MHz, with Advanced privileges

[US Technician without code]

(GR2.45.2,3,4, RIC-25 p. 9)

Q4: What's the difference between Basic and Advanced?

A: Without Advanced Qualification (or equivalent), you may not:

1. posess or install a transmitter or amplifier that isn't commercially designed and manufatured;
2. posess or install any radio apparatus manufactured specifically for use as a repeater where input and output are on the same band;
3. install a repeater where input and output are on the same band;
4. set up a club station

(GR2.47, RIC-25 p. 10)

Basic operators are also limited to lower power.

Q5: What are the power limits?

A: An Advanced operator or equivalent can use up to 1000 W dc input, if power is measured as input to the final stage, *or* an output of 2250 W PEP SSB/750 W carrier power for other modes, if output power is measured.

A Basic operator or equivalent is limited to 250 W input, *or* 560 W PEP SSB/ 190 W carrier power other modes, output.

It is illegal in Canada to posess or install a transmitter or amplifier capable of exceeding your legal maximum power by 3 db.

(GR2.58, RIC- 25 p. 11-12)

Q6: So a General class licensee can transmit phone on 3760 or even 14140 kHz? And a Novice can use a 2 meter repeater?

A: Absolutely.

Q7: But I heard that the FCC won't allow you to exceed your US operating privileges, even in another country.

A: I personally called the FCC and was able to confirm that this is NOT the case. The FCC does not enforce Part 97 in foreign countries. Despite what you may have read, it is perfectly legal to use whatever privileges Canada allows you (see above) while you are operating a station in Canada.

Q8: How do I identify in Canada?

A: If you're operating under your US license, then you use your call "mobile" (if you are) or "portable" (if you're not), *followed by* the appropriate indicator:

Nfld: VO1
Lab: VO2
PEI: VY2
NS: VE1
NB: VE9 (since Dec 1993; prior to this it was part of VE1)
Que: VE2
Ont: VE3 or VA3
Mtba: VE4
Sask: VE5
Alta: VE6
BC: VE7
NWT: VE8
Yukon:VY1

On CW, RTTY, and such you just use a slash, for example, I would use "KG2S/VE2" in Quebec.

The treaty requires you give your location by City and Province/Territory at least once per contact, but the Canadian rules make no mention of this.

While the treaty requires English ID, the Canadian rules allow you to use French, too. A chacun son gout. (However, you are not limited to English or French during your contacts; you can use any language.)

Of course, if you operate a Canadian station or get a Canadian license yourself, you use that callsign.

(GR2.57.1-3, RIC-25 p. 12)

Q9: What if I'm not from the US?

A: You will have to contact Communications Canada (numbers below) and apply for permission to operate. If your country has a reciprocal agreement with Canada, your privileges (once licensed) will be those outlined in Question 3.

If you, as a US licensee, want a Canadian license, you may be able to get it merely by passing a 26-question rules exam and giving a Canadian address. I know of at least one Advanced-class licensee who has done this with a Delegated Examiner. A Canadian station license carries an annual fee (currently about CDN$23), and license terms end 31 March of each year.

Q10: I'd like to get a copy of the Canadian rules. What do I do? Where do I address questions if I'm in a "gray area"?

A: I highly recommend getting a copy of the rules. They publish a number of circulars called RICs ("ricks") that you can order. They sent me these without charge. You can get them in French, too, of course ("CIR-25", etc.).

RIC-25: Rules and Regulations affecting the Amateur Service. 24 pp.

RIC-3: Banned Countries/Reciprocal List/Third Party Traffic List

RIC-66: Addresses and Telephone Numbers of Regional and District Offices

If you want information on exams in Canada, ask for:

RIC-24: Information on the Amateur Operator's Certificate Examinations

RIC-1: Information on the Delegated Examiner system

There are a lot of District offices, so I'm only going to list one in each Province. You can ask them to mail the rules to you, or you could get the address for the office closest to where you'll be visiting and go pick up what you want there.

/**\
* Rich Bono IMRICH UUCP:rbono@necis.ma.nec.com *
* (508) 635-6300 NM1D AMPR: nm1d@nm1d.nh.usa.noam *
**/

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CD-ROM online callbook

with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

Radio Frequency Interference (RFI) matters
Equipment Testing

I want stories about automotive EMI problems, dealings with dealers, and, if possible, solutions. I plan to forward these to my contact at the Society of Automotive Engineers (SAE).

If anyone knows the *right* people at any particular company, I want to know. I am also pursuing (via the SAE) more official channels.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Electronic versions available soon. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of
telephone models checked, send an SASE with two units of first class
postage to the Technical Information Service at ARRL HQ. Alternatively,
you may obtain an electronic copy from the info server below.

Many amateur radio informational documents (including EMI/RFI files) are
also available from the ARRL info server. Send E-mail to info@arrl.org
with the word "HELP" in the message body.

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

Owner of the PBBS Bulletin Forwarding Mailing List

The purpose of this list is to provide Sysops and Networkers a server in which to forward bulletins and also discuss forwarding problems and obtain forwarding partners. This server is also for the exchange of general information relevant to all Amateur Related PBBS software packages available today.

Owner of the F6FBB Packet Bulletin Board System Mailing List.

The purpose of this list is to provide both sysops and networkers with tricks/tips/help as well as software updates for the F6FBB packet bulletin board system.

To subscribe to or unsubscribe from either of the above lists, please send electronic mail to:

listserv@stat.com

and include the command:

subscribe list-name

or

unsubscribe list-name

as the first line of your message, where list-name is either bull-fwd
or mars-list. An acknowledgement/welcome message should follow very
shortly.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

End of Directory

1391. Re: Spectrum Show 30 Apr 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-01 17:55:26 UTC
From: mcduffie@hannibal.wncc.cc.ne.us
Message-ID: <2q0qee$kb5@docman.doc.state.ne.us>
Source record: 267606

The real question is: What's this trash doing in this news group?

Before you go off the deep end, remember the definition of trash. It is the same as weed. A rose is a weed if it's in the middle of the lawn. It's simply in the wrong place.

I have nothing against this posting except that it has nothing to do with this group. There are other places for it, especially when it is lengthy.

Gary

1392. Re: How to autopatch?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-01 18:18:48 UTC
From: mcduffie@unlinfo.unl.edu
Message-ID: <2q0rq8$adg@crcnis1.unl.edu>
Source record: 267608

You should also keep in mind that you are a "guest" on the system, even if it is an "open system". Don't just get on and use it as if you had a right to. Ask permission from someone in authority. You will be much more welcome by doing so. This also gives the person in authority the chance to pass along locally acceptable operating procedures and uses, what is expected of users, etc.

73, Gary

1393. Re:RFI proofing my computer?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-01 18:45:31 UTC
From: janc@icebox.iceonline.com
Message-ID: <Cp4zyI.2sr@iceonline.com>
Source record: 267609

>I would like to be able to use my computer along side, or in close
>proximity, to my HF, and VHF, equipment but have a problem with RFI
>(radio frequency interference). What are the most efficient methods
>for reducing RFI.
>
>I have 486DX2 50 MHz, Super VGA monitor, and a laser printer.
>All equipment is less than two years old and presumably well shielded.
>
>I'd like to be able to use my computer while I'm on the air, logging,
>packet, etc..., but the RFI is killing my reception on both HF and VHF.
>
>Any suggestions?

I have my radio gear located practically next to my computer monitor. My computer is in a tower case and sits on the floor. When I still had a desktop system the RFI was terrible, so I went out and found an all-metal tower case. It's important that you ground the case when you assemble it - there is usually a lug provided for that. As for the monitor, few are adequately shielded with the exception of low-rad monitors.

I'll be traveling to Mexico next month and was wondering if it's possible
to get a reciprocal amateur radio license these days. If so, what
is the procedure?

Thanks,

bart wb6hqk

Basically, the BoD made a new rule that field appointees had to
send their superiors a copy of all League related
correspondence. Luck leaked the news to the peons before the
patrones were ready.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 1/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 1 MAY AND FORECAST UP TO 4 MAY

IPS Warning 12 was issued on 26 April and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 075/013

1B. SOLAR FORECAST
02 May 03 May 04 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 080/020

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to minor storm.

Estimated Indices : A K Observed A Index 30 April
Learmonth 25 2333 4455
Fredericksburg 18 02
Planetary 23 02

Observed Kp for 30 April: 0110 1011

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 May 40 Active to minor storm.
03 May 30 Active to minor storm.
04 May 25 Unsettled to active.

2C. MAGNETIC COMMENT
Coronal hole induced activity currently in progress.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

01 May normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 May normal normal-fair pool-fair
03 May normal normal-fair poor-fair
04 May normal normal-fair poor-fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near normal, with 15-30% enhanced 08-14UT
and 20% depressed 23UT.

Observed T index for 01 May: 27

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
02 May 10 15 to 30% below predicted monthly values.
03 May 20 About 15% below predicted monthly values.
04 May 20 About 15% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

Well that certainly sounds like a felony to me. You mean they only fired him over such treasonous action? I would have thought that death by injection or slow torture would have been more appropriate. :-(

Superiors? Blech! Maybe there really *is* a reason I'm in RACES and not ARES.

For those of you who were asking a couple of months ago about getting a chest harness for your HT, I just saw a note in May 1994 QST on p.89 about the chest harness and a belt harness. It's $29.95 for the chess harness of the type ski patrol uses.

>: then the new Panasonic 900 mAh NiCd cells look mightly appealing.
>
>are these "AA" 900 mAH Nicads???? Gosh, you've got me drooling now!!!

Yes, they are, but before I get the net drooling, I learned
about this through hearsay, from Panasonic's competitor,
Eveready. We were talking about NiMH batteries, and he let
it slip that Panasonic one-upped them and had a 900 mAH AA
cell. The drawback is cycle life (250 or so vs. 1000).
I doubt that a competitor would fabricate something that
would hurt their own business :-) Your mileage may vary.

-Ken

1401. Recs for HF transceiver

Source record: 267617

after about 8 yrs off the HF bands, i've decided to get back, but
my old kenwood ts-520 has bitten the dust (repair estimate in excess of
$225!!)
anyone have recommendations on a mid-range replacement, something
reliable and easy to maintain--e.g <=$800. is there really
any significant diff. between icom, vs. kenwood, vs. yaesu.

jim revkin

Greater than 2 MeV Electron Fluence for 30 APR is: 1.2E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Activity was limited to a
series of uncorrelated B-class x-ray bursts. Regions 7710
(S14W56), 7711 (S10W02), and 7712 (S12E21) were numbered today.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field has been at quiet levels for
the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be quiet for half of the first day of the forecast period, then active to minor storm for the remainder of the forecast period. Activity is expected as the result of a favorably positioned coronal hole.

Event probabilities 01 may-03 may

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 01 may-03 may

A. Middle Latitudes
Active 35/30/30
Minor Storm 35/40/40
Major-Severe Storm 15/20/20

B. High Latitudes
Active 35/30/30
Minor Storm 40/45/45
Major-Severe Storm 15/20/20

HF propagation conditions were near-normal over all regions. The anticipated disturbance has not yet arrived, but is still expected to arrive over the next 24 hours. If it does, signal quality for middle to polar latitude paths should deteriorate (possibly rapidly) on 01 May. Conditions are expected to remain degraded throughout the next week.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

1403. HT Harness's

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-02 03:23:13 UTC
From: cslye@netcom.com
Message-ID: <cslyeCp5o2q.Htz@netcom.com>
Source record: 267614

There is alo another place that sells these, Life Assist.(They are my local CMC dealer, I do not know of other ones, but you can call CMC at 800-235-5741) These are CMC (California Mountain Company) harnes's. There are 2 types, and also a watersound one. Here is all the info.

CMC Rescue Deluxe Radio Harness (39.95)
For the rescuer who wants his radio harness to carry more then just a radio, we designed the Deluxe Radio Harness. We started with the stable design found in our regular radio harness and added several features. We included pockets for batteries, pens, mini-lights and maps. The elastic strip on the breastplate can be used to attach smoke cans or film cans for holding things like earphones or spare bulbs. Since the Deluxe Radio Harness is made of 1000 denier Cordua nylon it will not be as cool as the regular mesh harness. Color: Black

My comment since I have a nice big color picture here is that it is a good looking harness. Would be great for RACES (Or what ever that rescue HAM thing is, as some know I am just getting in to ham so...)

CMC Rescue Radio Harness (21.95)
We designed this harness to carry a standerd size, hand-held radio on the users chest, where it's protected from the impact and weather, yet is easily accessible. Just squeeze and talk, ne need to remove from the harness. This CMC Rescue design is unique in mnay respects. It offers extra stability, features a mesh breatplate for cooler wear, and has an adjustable strap pocket system which will fit a wide range of radio shapes. Color: Black

EWA Watersound (Standard: 59.95 Large: 69.95)
Protect your hand-held radios with the EWA Watersound. This flexible, lightweight, waterproff housing seals out water, salt spray, sand and dust. It is used by lifeguards, river rescue and dive teams, whitewater guides, hazmat and search & rescue teams operating in the rain or water. The housing is made from double laminated PVC. The radio is operated while it's inside the pouch. A finger insert makes adjustable top mounted control knobs easy. The housing has a corrosion proof closing rail with stainless steel screws and comes with an adjustable carrying strap. The standard size fits radios up to 2-1/2in. wide, 1-1/2in. deep and 7-1/2in high with a 15in. antenna. The large size fits radio up to 4-1/2in. wide, 3in deep and 11-1/2 in. high with a 19in. antenna. Both units are pressure tested to a depth of 66 feet.

WOW That was long :) Sorry about the bandwidth wasting, but I found these good for Ham radios operaters that work events, etc.
Hope it saves a radio from being droped or getting soaked :)

The following is a QST

The FCC says that there will no fee for a basic ham radio license, an unlicensed broadcaster is told to pay up and Dayton '94 is on! These stories and more on Newsline report number 872 coming your way right now.

(*****
LICENSE FEE NPRM RELEASED

Basic ham radio licensing will remain free but there definitely will be a nominal charge to hams who want a special vanity call sign. This is the just of an FCC Notice of Proposed Rule Making aimed at implementing the new fee assessments for various licensees that were authorized under the 1993 US Budget Act. It's item number fifty-nine that is of interest to the Amateur Radio service. It proposes a specific fee structure for amateur "vanity" call signs if the Commission's proposal for a plan to offer such call signs eventually is approved. The FCC's current proposal is to assess a fee of $70. That's actually seven dollars a year for the ten year term of an Amateur Radio license. The good news in all of this? There are no other government fees being proposed for any other aspect of the ham radio

licensing process.

(*****
YODER

An unlicensed broadcaster has been told to pay a hefty fine. The FCC says that it is denying Andrew R. Yoder's Application for Review of his $17,500 penalty for allegedly and repeatedly operating an unlicensed broadcast station. The FCC categorically rejected Yoder's argument that the evidence against him was purely circumstantial and insufficient to establish that he was legally in control of the so called pirate station.
On February 22nd and 23rd 1992, FCC engineers monitored transmissions from an unlicensed broadcaster on 7.415 Mhz. The station identified itself s Radio USA. The transmissions were eventually traced to Yoder's parents home in Springs, Pennsylvania. When FCC investigators arrived they found Yoder's car parked in the driveway and attempted to make a station inspection. But they were barred from entry by Yoder who says that he is in no way obligated to allow Commission personnel to inspect his station.
While the FCC never did see the alleged pirate broadcast station, they say that the station and operator were positively identified by both voice and close-in direction finding. Later, audio tape analysis and voice printing indicated that Yoder's voice was the same as that monitored on the Radio USA broadcasts.
As previously reported, on May 21st 1992, the Laurel, Maryland FCC Field Operations Bureau issued Yoder a $17,500 Notice of Apparent Liability to Monetary Forfeiture. The NAL was converted to a fine after the FCC rejected Yoder's response. Yoder was ordered to pay the fine before April 11th 1994 or face further punitive action.

(*****
INVESTIGATION EVIDENCE

Still with FCC regulatory issues, word that the investigation of irregularities in numerous California VE test sessions is still ongoing and the government is seeking evidence in the case. The feeling among Washington insiders is that the investigation may soon expand outside of California. Some believe that there is the possibility of ties to VE teams in other states including south Florida and Texas and areas in the Caribbean.
If you have any information that you feel might help in this or any other alleged licensing fraud case there are a number of ways to get it to the investigators handling the matter. After looking at all the possible avenues it is our conclusion that the best one of all is to contact Bart Jahnke, KB9NM who runs the American Radio Relay League's VEC operation. Bart has been handling the current investigation for the American Radio Relay League and in our view he is an excellent person to channel any facts concerning

this matter to the FCC.
There is no way that Bart or anyone else can promise you anonymity, but Bart can be reached at the ARRL VEC, area code (203) 666-1541. If you would rather write, his address is Bart Jahnke, in care of the ARRL VEC, 225 Main Street, Newington, Connecticut 06111.

(*****
FCC ORDERS SOUTHERN CALIFORNIA RETESTS

Here is a late breaking story. Word that Fifty nine Southern California hams have been ordered by the FCC to stand for retesting or face the possibility of further punitive government action. The FCC says that all fifty nine are hams who passed at examination sessions conducted by the ARRL VEC in 1992 and 1993. They say that the examinations and the administering Volunteer Examiners that gave them are now under intensive scrutiny by the Commission and other government agencies.
In its letter to those being ordered retested, the FCC flatly accused the applicants examined at those exam sessions of cheating. The letters say in part: "...the irregularities on your examination papers indicate that you were apparently given access to the exact (answer) key used by the volunteer examiners."
The commission has given the fifty-nine applicants exactly sixty days in which to retake any disqualified examination element at a session being conducted by the Greater Los Angeles Amateur Radio Group VEC. Failure to pass a retest will result in license class downgrade, loss of call sign or loss of license entirely, as deemed appropriate by the FCC.
In issuing the retesting order, the FCC also mandated that no volunteer examiner who was present at the suspect session, regardless of whether or not he administered test elements at those sessions, would be permitted to attend or administer a re-examination.
So far almost three dozen VE's throughout California have been suspended on FCC orders to the Volunteer Examination Coordinators under whom they serve. The bulk of these being in the southern half of the state and to mandated retesting order by the FCC is viewed as another step that could lead to criminal charges being filed against volunteer examiners that the FCC believes aided and abetted applicants to obtain amateur radio licenses or upgrades through fraudulent means.

(*****
EDITORIAL NOTE: EXAM CHEATING

If we may be permitted a brief editorial opinion. Be it California, Florida, Texas, New York or anywhere else, there is simply no place in ham radio for those who may be profiteering by bringing in people who do not meet the minimum criteria for entry. We at Newsline have made exposing those behind any testing scam

a number one priority. This is one matter that we at Newsline will not let die in the Washington bureaucratic red tape.

(*****
DAYTON '94

As this newscast goes to air, the 1994 Dayton Hamvention is just getting underway. Reports from Dayton's Hara Arena say that '94 may be the best Hamvention in years. Newsline will have a complete wrap-up on Hamventon '94 next week.

(*****
MOTOROLA SUIT

A name well known to radio amateurs is Motorola. The company pioneered two way FM communications. Many an early FMer started out with a single channel 80 D or Motrac in the trunk of his car. The HT 220 hand held is a legend to FMers and it was Motorola that supplied the handie talkies used on all of the SAREX space shuttle missions. But now Motorola is in trouble with its competitors who are claiming unfair business tactics.
The city of Birmingham, Alabama wants to upgrade its police and fire rescue radio system. Motorola submitted a bid of nearly $11.5 million for an 800 Mhz trunked system. That's near a million dollars more than the bid submitted by Erickson GE Mobile communications. None the less the city signed a contract with Motorola. Erickson GE accused the city officials of violating state bid laws. The company has filed suit against the city in Federal Court.
Counsel member Jimmy Blake opposed giving the contract to Motorola. He said the city did not follow proper bid procedures. The next step is up to a Federal Judge.
If one prediction comes true, Motorola will still wind up the winner. There is speculation that city leaders will throw out the proposals and solicit a new set of bids. If that happens the city could make the bid specifications so strict that only one companys system can be considered.

(*****
CALIFORNIA HERO

Amateur Radio recently made headlines in Acton, California when 36 year old Chris Killian, N7IOV, helped in the capture of two robbers. According to the Antelope Valley News of Lancaster, California Killian was approached by an armed man in a McDonald's restaurant. The alleged felon inquiring about Killian's Hand-held radio.
When the man and an accomplice left the eatery, Killian, who is a reserve deputy, followed and relayed their route to another ham who contacted sheriff's deputies. The two suspects were picked up that night and charged in the hold-up. Killian told the News that he ordinarily doesn't carry a radio with him but that he'd been

using the hand-held the previous weekend to test several area repeater stations.

(*****
MISSISSIPPI ICE STORM

The massive ice storm that hit much of the U.S. on in February was especially damaging in Mississippi, and was the worst there in more than 40 years. This, according to Hank Downey, K5QNE. Downey, writing in The Magnolia Report ham radio newsletter says that the State's Amateur Radio disaster relief efforts were led by Jim Porter, W5HTV. Porter is Director of Communications for the Mississippi Emergency Management Agency. He and Larry Clark, WB5AKR who is that groups statewide liaison to the Amateur Radio community directed traffic handling while also sending amateurs to areas of greatest need.
Porters just released report says that several amateurs were able to set up from mobile and portable, emergency-powered sites and to activate the Magnolia Net. This is the Mississippi Section phone net and its key operators included among its members was net manager Al Sudduth, WA5TPM. Al operated mobile after his home antennas came down in the ice.
Porter also writes that the Jackson Amateur Radio Club activated W5PFC, their permanent station at the State Headquarters of the American Red Cross in the capital city, to coordinate with Red Cross offices around the state.
As we go to air, its reported that many hams in this same area have just completed handling communications for the recent flood emergency. You have seen the pictures on CNN and other television news services. That story as soon as the ham radio details are known.

(*****
HERTZBERG OBIT

The changing of the guard in Amateur Radio continues with the sad news that Joe Hertzberg, N3EA has died. The ARRL reports that Hertzberg passed away in Silver Spring, Maryland at age 86. Joe was previously known as K3JH and was first licensed in 1926. During World War Two he was involved in the development of electronic navigation systems. His work brought him wide acclaim and he was decorated by both the U.S. and England.
After the war Hertzberg went to work for RCA and in 1956 was named RCA Man Of The Year. He ended his career as a corporate vice president of RCA. In the late 1960s, he became active in Amateur Radio once again and his station included a full-size 80 meter cubical quad on a 115 foot Telrex "Big Bertha" rotating pole that was featured in a 1970 QST. He put his station to good use following several natural disasters, including a 1972 earthquake in Nicaragua.
Joe Hertzberg, N3EA dead at age 86.

(*****
TV ENGINEER KILLED ON REMOTE

A television remote pick-up broadcast engineer was on assignment for CNN was electrocuted while in a broadcast van outside a federal courthouse. Al Battle, 37, was part of a technical crew from Potomac Television Services Corp., which provides services to the Cable News Network.
Battle was inside the van raising the antenna mast when the microwave dish hit a wire on February 22. He was at the courthouse for a story about a CIA official and his wife who were charged with spying. As far as we can determine Al Battle was not a radio amateur.

(*****
MIR / SAREX LINK

The space shuttle and the Russian Mir space station have QSO's by ham radio. On April 13th astronaut Jay Apt, N5QWL, contacted Rita Iaquinto, VK3CFI, in Melbourne, Australia. At the same time Russian cosmonaut Valery Polyakov, U3MIR, hooked up with Graham Ratcliff, VK5AGR, in Adelaide. The Australians then used a telephone link to connect the two spacecraft as both passed over Australia, at 5:36 PM Australia time. The Shuttle to Mir contact was arranged by the Shuttle Amateur Radio Experiment Working Group.

(*****
BAKER TO NEW ZEALAND

Finally, NASA Astronaut Dr. Ellen Baker KB5SIX, is soon to journey down-under. Dr. Baker was flying near New Zealand in the space shuttle when she expressed a desire to see that country close up.
In 1992 NASA Astronaut Dr. Ellen Baker, KB5SIX orbiting in the space shuttle Columbia was on a ground track slightly to the north of New Zealand. She spoke with many New Zealand radio amateurs, one of whom was Adrian Watkins, ZL2UGK.
Dr. Ellen Bakers 1992 wish to visit New Zealand has come true. On June 7th this year KB5SIX is to be guest speaker at the New Zealand Association of Radio Transmitters Annual conference in New Plymouth. A city in the New Zealand north province of Taranaci.
From flying high in the space shuttle Columbia to visiting down under, a dream has come true. And all from and idea in the mind of conference organizer Adrian Watkins, now sporting the callsign ZL2JPL.
Adrian says using amateur radio connection in the U.S.A. they tracked down Dr. Baker and invited her to the conference as guest speaker. Her initial reaction, "Is this a friend playing a practical joke?" She was overwhelmed when she realized it was for real.
Dr. Baker says she enjoyed speaking with many ham radio operators in New Zealand during her last flight aboard the

Columbia and is looking forward to meeting her friends from the
airwaves.
Dr. Bakers trip to New Zealand will take a bit longer this
time. She is traveling by commercial airliner at about 500 miles
an hour. That's a lot slower than the 17,000 miles per hour speed
of a shuttle orbiter.

Asterisk indicates predicted value.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.

==========

2. FLARES AND SHORT-WAVE FADEOUTS

All M flares with an energy greater than or equal to M1 are tabulated under class M flares.
However, times of fade-outs are shown only for flares with an energy greater than X-ray class M3.

DATE CLASS M CLASS X FADEOUT POSSIBLE
FLARES FLARES ON DAYLIGHT CIRCUIT
None.

2.1 Comments on Solar Activity.
Solar activity was at very low to low levels throughout the month.
Daily 10cm flux values continued at low levels.
The peak value for the month was 87 on April 21. The
minimum value for the month was 73, observed from April 6-9.
The monthly sunspot number of 16.7 was the lowest value observed since March 1987 (not long after solar minimum in September 1986). Interestingly, activity was almost absent in the southern hemisphere of the sun, continuing the trend shown on the back page of last month's Solar-Geophysical Summary.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)
DATE COMMENTS

April 2-14 Active to minor storm levels were regularly observed from April 2-14. In addition, periods of major storm levels were observed on April 5.

April 16-18 After subsiding over April 15, geomagnetic activity picked up again from April 16-18, with major storm levels observed on April 17 and active periods observed on April 16 and 18.

3.1 Comments on Geomagnetic Activity.
Lengthy recurrent disturbances were again observed this month.
The two most disturbed days of the month were April 3 and April 17,
with A indices of 53 and 60, respectively. Recurrent activity began again on May 1 and is expected continue until around May 15.

==========

4. IONOSPHERIC DISTURBANCES (for Sydney)
DATE MUFs

April 1 Depressions of 15% were observed for the first half of the local day.

April 2-3 Depressions of 30% were observed April 2/22 - 3/01UT (from just after local dawn on April 3). Spread F was observed during the local night on April 3.

April 6-7 Depressions of 10-15% were observed during local daytime.
Spread F was observed during the local night on April 7.

April 9 Depressions of 15-25% were observed during local daytime.

April 10-12 Depressions of 15-30% were observed throughout the day, with
strong spread F observed during the local night.

April 13 Depressions of 15-30% were observed for the first half of
the local day.

April 17 Frequencies were variable, with enhancements of up to 30%
at times (probably due to the geomagnetic storm that was in progress). Spread F
was observed during the local night.

April 18 Depressions of 15% were observed during the local day, with
spread F observed during the local night.

April 19 Depressions of 15-20% and Spread F were observed at times
during the local night.

April 20-21 Spread F was observed at times during the local night.

4.1 Comments on Ionospheric Conditions.
Ionospheric conditions during April were again degraded by pro-longed
geomagnetic activity. The largest depressions were observed on April 10-12,
with generally degraded conditions from April 2-17.

NOTE: The Effective Sunspot Number for 30 APR 94 was 36.1.
The Full Kp Indices for 30 APR 94 are: 0o 1- 1- 0o 1- 0+ 1o 1o
The 3-Hr Ap Indices for 30 APR 94 are: 1 3 3 1 3 2 4 4
Greater than 2 MeV Electron Fluence for 01 MAY is: 2.5E+06

SYNOPSIS OF ACTIVITY

Solar activity was very low. There were numerous small
erupting flux regions on the disk during the period: amongst
these new Region 7715 (N08W29) was developing the most
quickly. All of the regions on the disk appear to be stable at
this time. An eruptive prominence was observed on west limb
today near S32 between 1421Z and 1558Z.

Solar activity forecast: solar activity is expected to be
very low to low.

The geomagnetic field was mostly quiet to active with some periods of storm conditions at high latitudes. An initially quiet field became disturbed after 0600Z: mid-latitudes have been active and high latitudes have fluctuated between active and major storm levels. The most likely source for the disturbance is a favorably positioned coronal hole.

Geophysical activity forecast: the geomagnetic field is expected to be at active to minor storm levels for the next 36 to 48 hours as the current disturbance continues. Activity is expected to decline sometime on the second day with a return to unsettled to active levels by the third day.

Total Events: 008 optical and x-ray.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

GTOR (cont.)

Background Research

It occurred to us after porting Pactor into the KAM that this
protocol did not go far enough. It did not incorporate any of
the potential strengths prescribed by MIL-STD-188-141A. In
addition, we knew that commercial and military systems use
forward error correction (FEC) and data interleaving. So, we
decided to evaluate the potential of using FEC coding with
interleaving to increase data file transfer throughput with
existing multi-mode TNCs such as the KAM and KAM-Plus.

We collected signatures of HF error patterns by sending Pactor
idle characters through a DSP-based HF simulator. The
simulator was programmed for various types of channels and
conditions. In particular, we gathered error signatures by
using the good, moderate, poor, and flutter fading channels
prescribed by the CCIR (5) as recommended simulator test
channels.

We then exclusive-ORed the error patterns with random data
files on a PC and tested various coding schemes. Random data
files were Golay encoded, interleaved, and then mutilated by
the error signature. The process was then reversed; each file
was de-interleaved, decoded and the data displayed. We were
encouraged with the results so we moved on to the remaining
major design tasks: designing a robust hybrid-ARQ protocol and

determining whether or not the TNC could handle the necessary computing task!

A protocol evolved over time that met the challenge. We coded and ported it into the KAM Plus and conducted real-time tests using the HF simulator. Minor adjustments were made and we began on-the-air tests. G-TOR performed even better than our simulator predicted. Through a combination of coding and interleaving, G-TOR 'hung in there' even when interference appeared and signals were weak but readable.

G-TOR Frame Structure and Hybrid-ARQ Cycle

G-TOR operates as a synchronous hybrid-ARQ, see figure 1. Regardless of transmission rate, the cycle duration is always 2.4 seconds, data frames are 1.92 seconds long, and the acknowledgements take 0.16 seconds. At 300 baud, each data frame contains 69 bytes of data, one control byte, and a two byte CRC. Frame makeup is noted in figure 2.

figure 1. G-TOR frame timing

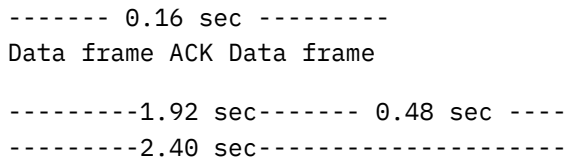

Figure 2. G-TOR frame structure before interleaving

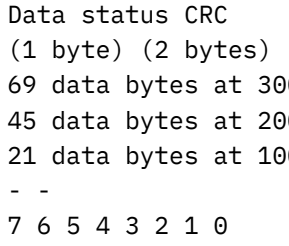

To establish a link, the master station transmits the callsign of the intended receiver and the information receiving station (IRS) synchronizes to it. Once in step, it acknowledges such to the master and sends <link established> to its terminal. Transmission of data may then begin. Sufficient time is left between the end of the data frame and the start of the acknowledgement for propagation between stations over an HF path. The IRS changes its acknowledgement frame into a full-length data frame to effect a change in direction in information. Once the other station acknowledges this action, changeover is complete. Link quality, dictated by the number of consecutive good or bad frames received, determines link speed.

The effective performance of stations, while communicating over adverse HF channels, relies on the combined use of forward error correction, interleaving, and redundancy. These tools for improvement are incorporated in G-TOR within the firmware of the KAM-Plus (or KAM with enhancement board). We adopted an extended version of the (24,12) Golay code for G-TOR. the generator polynomial is

$$g(x) = x^{11} + x^9 + x^7 + x^6 + x^5 + 1$$

Procedures for data formation, transmission, reception, and data recovery are outlined below. Prior to transmission, 300 baud frames are divided into 48 12-bit words and matched with 48 error correction words of 12 bits each. The entire 72 byte data frame is then interleaved bit by bit, resulting in 12 bins of 48 bits, and transmitted . Upon reception by the IRS, the reverse process is carried out. The frame is synchronized, de-interleaved, decoded, and checked for proper CRC. If the frame is found to be in error, the IRS will request that the matching parity frame be sent. Upon receipt, the parity frame is used in combination with the data frame in an attempt of recover the original data bits. If unsuccessful, the ARQ cycle begins again. The dispersement of noise-burst errors via interleaving and the power of the Golay code to correct 3 bits in every 24 usually results in the recovery of error-free frames.

more next week

Editor's note : there is a critique of GTOR on the packet system at the moment. In the interests of amateurs who do not have access to packet, we will run this item following the completion of this review so as to have another viewpoint on this new system.

IPS weekly report

---

22 April - 28 April 1994

Issue No 17
Date of issue: 29 April 1994

INDICES:

Date	22	23	24	25	26	27	28
10cm	085	085	083	083	081	078	077
A	06	10	08	08	06	06	(05 estimated)

SUMMARY OF ACTIVITY

Solar activity was low on 22nd, and very low 23rd-28th April.

The geomagnetic field at Learmonth (WA) was quiet on 27th-28th April, and quiet to unsettled for the remainder of the period except for one active period on 23rd.

Ionospheric F2 critical frequencies at Sydney were near predicted monthly values throughout the period.

FORECAST FOR THE NEXT WEEK (29 - 5 May)

SOLAR: Very low to low.

GEOMAGNETIC: Unsettled to active on 29 April, active to minor storm levels thereafter.

IONOSPHERIC Near normal to 15 per cent below predicted monthly values.

Courtesy of IPS Radio and Space Services

VK2SG RTTY DX NOTES 22 APR 94

VK2SG RTTY DX NOTES FOR WEEKENDING 22 APRIL 1994 (BID RTDX0422)

Notes appear a little short this week, but with conditions as they have been and actually are, reports have been few. There has been very little activity, or maybe everyone was chasing on the bands to find some signal around. There is a good news for those looking for 9X5LJ. Jacques and his wife Monique are now in Belgium all safely.

Our thanks this week go to: ZS5S, W2JGR, WB2CJL, VK2SG, ON6RO, I5ICY, I5IGQ and IK5PWJ PacketCluster and the NJ0M node of the Twin Cities.

NOTES OF INTEREST:
DXAC VOTE RESULTS. The DXAC passed a recommendation to delete Walvis Bay (ZS9) and Penguin Islands (ZS0,1). Both countries became deleted effective date of March 1, 1994.

RTTY (FS RTTY). We mourn the loss of Harvey McCoy, W2IYX who became a silent key on 17 April 1994. Harvey was the "father" of frequency shift RTTY (FS RTTY), having invented it for the U.S. military during World War II. All RTTYers owe him a debt of gratitude.

To those going to Dayton next week I wish a nice trip and lot of fun in the meeting and during the RTTY Dinner.

GL de (DX2) Luciano, I5FLN AT ZS5S.ZAF.AF

May 14th-15th Volta RTTY WW Contest

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD, or the Secretary (Pat) VK2JPA @ VK2RWI or whatever is the current substitute BBS.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA as above.

Email address for the Broadcast Officer is :

patl@conmusic.pitt.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast footprint. We know we reach ZL and many South Pacific islands. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes ANARTS NEWS807 01/05/94.

Inserted by VK2BQS (Jim) Vice President ANARTS.

1408. PRC-47 Military Radio...Hints needed, etc...

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-02 08:41:38 UTC
From: phantom@pro-haven.cts.com
Message-ID: <1994May2.031714.18408@pro-haven.cts.com>
Source record: 267622

Howdy...

I've just aquired a PRC-47 military radio set and was wondering if
anyone out there in net-kingdom might have any helpful hints or any other
info about this set...personal experiences and advice would be really
nice.....
I've also been told that there is a mechanical filter available for
this set to allow LSB transmission...if anyone knows of the source for
these (I was told they were about $25.00 USD...), please let me know that
as well.....
For those that do not know what this radio is, it is a fairly
large, cumbersomb, manpack (45#?!), military field radio. It covers
2-11.999 MHz and has cw/fsk and USB capability (no lsb...the military
doesn't like to put lsb on most all their radios.....regardless of
frequency.....) It was primarily intended for mobile or portable use...
Please e-mail responses as I don't always seem to get all the news
that goes through the net.....
Thanks in advance! 73!

Message-ID: <9405021138.AA15917@dacws2>
Source record: 267626

Hi folks,
Is there still an SKN (Straight Key Night) where CW fans meet
and use ordinary hand keys?
If not, are there OM that can remember such Straight Key
Meetings?
Does or did something similar exist for semi-automatic keyers
(mechanical bugs)?
In Europe there is a Straight Key Day every New Year's Day
and every Midsummer Day (organized by a Scandinavian CW club),
there is also a "bug" party organized by a German club.

I'ld be grateful about any info concerning such events in the
US or other parts of the world (history, dates, participation)

Really enjoyed the HAMVENTION this weekend. My 9 year old Daughter really enjoyed the SAREX 10th Anniversary Forum where she meet Astronauts Tony England, W0ORE and Steven Nagel N5RAW. She is even more interested in getting a ticket. I was interested in the ARRL address and failed to "swim" to their booth to get some more information about SAREX. I have it at home but does any body carry this imformation off the top of their heads. Would greatly appreciate it.

1413. Periodic Announcement - ARRL Email Information Server (info@arrl.org)

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-02 14:38:55 UTC
From: mtracy@arrl.org
Message-ID: <89680@mt.arrl.org>
Source record: 267531
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.homebrew,rec.radio.info

Periodic Announcement - ARRL Email Information Server (info@arrl.org)

The services that the ARRL provides via the internet include the
Email Information Server and the Technical Information Service.
The Information Server is an automated mail server that gives you
access to many of information files relating to various facets of
Amateur Radio. You can retrieve any or all of these files by
sending an email message to info@arrl.org here at ARRL HQ.
Each file you request is then mailed to you automatically.

To use it, mail messages to:

info@arrl.org

Each line of the message body should contain a command as shown below.
The subject of your message is not processed and may be omitted. You
may place as many commands in a message as you want. The files you
request will be sent to you in separate messages. Only ASCII text
files are supported.

Valid INFO commands:

reply <address> (may be needed - see below for explanation)
help
index
send FILENAME (example: send prospect.txt)
quit

In the above message example, "help" retrieves a brief set of
instructions for info, "index" retrieves a list of available files
and "send prospect.txt" retrieves a text file containing information
on becoming a radio amateur.

Note to users with FTP capability: All of these files are also
available by anonymous ftp to oak.oakland.edu in the
pub/hamradio/arrl/infoserver area. Retrieve the file index.txt
in the /league sub-directory for a complete listing of available
files.

If you want to retrieve several text files with one message, use a
separate line for each "send filename" request.

Your From: field or Reply-to: field in your header should contain a
valid Internet address, including full domain name. If your From:
field does not contain a valid Internet address, the answer will not
reach you. If this is the case, then use the reply command as shown

above. When needed, this command should always be the first command in your message.

IMPORTANT: Please use the quit command in your message. This will prevent processing errors from message signatures.

PLEASE NOTE!: This is an automated system not capable of handling written requests. Any questions on the info-server or the content of any of its files should be directed to mtracy@arrl.org.

ALSO NOTE!: Do *NOT* reply to messages sent from info@arrl.org - the reply address is redirected to keep bounced messages from endlessly looping. Write a new message to info@arrl.org instead.

The Technical Information Service gives League members on the internet better access to the knowledgeable technical staff here at ARRL HQ. Questions relating to Amateur Radio and related technical topics are welcome. To use this service, send a normal e-mail message to tis@arrl.org with your question spelled out in plain english. For best service, be as specific as possible and keep your line length in messages to a maximum of 80 characters. Due to personnel limitations, priority will be given to questions from League members.

Best Regards,

Michael Tracy, KC1SX, ARRL Technical Information Services Coordinator
(e-mail mtracy@arrl.org)

Sample of files available from INFO: (There are lots more!)

Note - If you are not yet an Amateur Radio operator retrieve the file prospect (send prospect) for information on how to easily get started in this fun hobby.

>Please include the type of mount you are using. I am looking
>for a non-permanent mount which will not scratch the car.

The outbacker has a low profile and very popular amongst many hams. However, let me recommend the Texas Bugcatcher (the regular from GLA Systems or the mini from Texas Radio) to you. I used a bugcatcher with a TS50 running 10w and worked UA1, LZ, PY, VP5, ES, G and some more while driving to Dayton this last weekend. A while ago some one had posted a comparison of a bunch of mobile antennas which rated them based on field strength measurements. The outbacker was dead last and the bugcatcher first - with a factor of 50 or so. That is 17db!

However, I am sure that you can work a bunch of stations with the outbacker and it sure looks a lot more slicker.

Regards,
Rajiv

>Superiors? Blech! Maybe there really *is* a reason I'm in RACES and not ARES.

Well, a bunch of us talked with Wilson, the OYI dude, in Dayton while he was guarding the ARRL booth at the Hamvention. He said that the BoD had nothing to do with it and that it was a League personnel matter. He cited privacy laws and fairness to Luck as reasons for lack of openness about the matter. Seems fair to me.

1416. Which DSP Unit?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-02 15:20:28 UTC
From: hpb@hpb.cis.pitt.edu
Message-ID: <21593@blue.cis.pitt.edu>
Source record: 267532

While attempting to hide from the rain and mud at Dayton this year, I wandered into a dog-and-pony show for a DSP audio processor made by a company named Timewave. I was quite impressed.

I was all set to buy one of their units when a friend suggested I visit the booth of JPS, another DSP vendor. I sat through their sales pitch and was also impressed.

While out in the flea market, I came accross the Radio Shack area and noticed that they too sell a DSP unit at a very low price (around $70).

I am now greatly confused. Timewave's unit seems to have superior ergonomics and the ability to fine-tune the filtering, but JPS seemed to have a better noise reduction algorithm. And although Radio Shack is bad-mouthed by many hams, their ham gear generally receives pretty good reviews in QST, so it's possible that their cheap DSP unit is a bargain. So to clear up some of this confusion, let me pose the following questions to the Collected Wisdom of the Net:

- The two units that I saw demoed seemed to work very well while processing the signals on vendor's tapes. How well do they work in the Real World?

- How well does Radio Shack's DSP unit work?

- Which vendor do you prefer, Timewave, JPS, or Radio Shack?

- BONUS QUESTION: Would any of the DSP units have been of any value in getting my car out the mud in Dayton on Saturday? :=)

I would like to know how to make a diplexer 2m/70cm.

This is a small box made to connect a VHF and a UHF mobile radios to a
twin-band antenna.

Anybody have a drawing or some instructions to make that?

Editor: Cam Inglis <INGLISC@GTM-INC.COM>
Internet Editor/Transmission: Steve Cutway VE3GRS <CUTWAYS@QUCDN.QUEENSU.CA>

PIRATE USING RAC HEADQUARTERS CALL SIGN

Industry Canada has been notified of a pirate station operating on
Packet Radio using RAC's new Headquarters station call-sign "VA3RAC". An
"anonymous" packet message originating out of a Georgetown Ontario BBS
discredited and attacked members of RAC's national executive.

Canadian amateurs are advised that VA3RAC messages or news bulletins
originate out of the Kingston Ontario BBS "VE3CDY" only. Officials are seeking
information leading to the identity of the persons illegally using the VA3RAC
"pirated" call-sign. RAC legal counsel is examining abusive Packet messages
used to defame individuals. Legal action is contemplated.

Source record: 267577
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

NudeNet is a radio net for radio amateurs that are also nudists and
naturists. We meet each Thursday evening at 0000Z on or near
14.265MHz depending on QRM.

Most times, there are 10-20 check-ins. If you're a nudist,
a naturist, or just curious about clothing-optional recreation,
please check-in.

Discussions on NudeNet cover a wide range of topics but mostly
center around topics related to nude recreation, such as nude
beaches, nudist resorts, hot springs, nude hiking, etc.

Additionally, most of the regular participants are able to
provide information about clothing-optional recreation opportunities
in many areas of North America (or the world for that matter).
A quarterly newsletter is also slated to begin publication shortly.

We announce "current events" on an electronic mailing list.
If you'd like to be added to this mailing list, please send email to

ben@yosemite.sps.mot.com

Include a short note telling us something about yourself that can be
used as a first post. This serves as your introduction to the group.

For additional information, contact Jim via email at:

jimc@megatek.com

or via snailmail:

Quoting KEN KUZENSKI to JIM GRUBS, W8GRT concerning Ham License:

�� KEN KUZENSKI to JIM GRUBS, W8GRT
��������������������������������ķ
� �
� JGW> I think the FCC is proposing to reduce the number of classes of�
� JGW> license. Maybe that's the story someone read wrong. �
��
Ľ

The newest 610 (November 1993) effective March 1, 1994 now contains 6
classes of licenses!
Novice
Technician
Technician Plus
General
Advanced
Extra

In the past a Technician with code credit had only a CSE to verify his
privileges on HF. All such Technicians will now have their licences issued
with the class spelled out - TECHNICIAN PLUS, no CSE will be needed! I also
assume that the FCC data bank will have the amateur noted as a Technician
Plus instead of just Technician. This change will eventually be reflected
in the commercial Call Books and CD-Rom data bases.

It is also my understanding that all Technicians with code credit may
request a new license with the title of Technician Plus noted on the
license!

Another 8 to 10 weeks of waiting time for the new ticket. A better idea
would be to hold off and get the code speed up and go for a General or
Advanced class ticket! <g>

* AO-27 OPERATING NOTES *
=========================
AO-27 has had its FM transponder in operation on the weekends when the spacecraft is in sunlight. The transponder on AO-27 receives on an uplink frequency of 145.850 MHz FM, and downlinks on 436.800 MHz FM. As of yet, no official operating schedule has been announced, but that hasn't stopped amateur experimenters from communicating with others through the satellite.

As an example, John, N8QGC, has been working stations on AO-27 all the way from his Detroit area QTH to as far away as Mexico City, Mexico, Baffin Island, and the North West Territories. N8QGC usually works AO-27 from a mobile station using 10 watts of transmitter power from his Kenwood TM-731A and a homebrew 1/4 wave antenna. Even with his low power and small antenna system, John has no problem securing a strong signal into the satellite. He has even tried accessing the satellite with his ICOM IC-U2AT running 2.5 watts and a rubber duck antenna and also had a good uplink signal (especially during periods when larger stations were not clobbering the satellite uplink with excessively strong signals). Due to the extreme sensitivity of this satellite, uplink ERP should be kept below 25 watts.

AO-27 control station Mark, N4TPY, has reported that the satellite has a transponder output power of between 2 and 3 watts at the present time, and as such, is nearly impossible to receive on a HT with a rubber duck. Omni-directional antennas have provided only limited results.

N8QGC uses a 6 element KLM 440-6X yagi rated at 8.9 dB gain to copy AO-27's downlink signals. He aims it out his car window and receives the satellite well. The doppler shift experienced when communicating through this satellite can be quite high. John usually starts listening for AO-27 at 436.805 MHz, and tracks it down to 436.790 MHz at LOS.

Santoyo V. Ramon, XE1KK, of Mexico City has reported hearing Spanish speaking stations through AO-27 with very strong signals. They are not

hams, nor are they hearing the satellite downlink. He believes they are located in the Caribbean zone, probably Cuba or Puerto Rico, and have been heard talking about union elections. He is actively tracking down the source of these signals.

[Info via N8QGC, XE1KK, and ANS]

* KEPLERIAN DATA AVAILABLE *

Conway Yee (yee@mipg.upenn.edu) wrote:

: >Does it really say "members of"? I believe you only have to be
: >"located in" the ARRL field organization.

: 1) Eligibility: Field Day is open competitively to all amateurs in the
: ARRL/Canadian Field Organization (plus Yukon and NWT). Foreign
: stations may be contacted for credit, but are not eligible to compete.

: Are US hams who are not ARRL members "in" the ARRL field organization?
: If so, wouldn't the phrase "US/Canadian" be more appropriate? It
: certainly appears to me as if all Canadian hams are eligible but only
: US hams who are ARRL members can compete.

I'm certain that's not true. The entry forms don't ask whether you
are an ARRL member of not. They probably don't use the phrase
"US/Canadian" because it might cause some confusion in areas like
Puerto Rico and Guam which are part of the ARRL field organization,
but are not one of the "United States."

1434. Yaesu FT-41R PL problem--read before buying (FT530 note at end)(LONG)

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-02 18:48:07 UTC
From: kennish@kabuki.EECS.Berkeley.EDU
Message-ID: <2q3ht7$nen@agate.berkeley.edu>
Source record: 267547
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

This note is being provided as a service to the amateur
community. It is not intended to endorse or dis-endorse
this product, but rather to educate the community to a
problem, for which a solution exists.

****

The Yaesu FT-41R (and perhaps it's sister 11R) has a problem
with the PL (CTCSS for you Motorola lawyers) tone frequencies.
If you do NOT buy the optional FTS-26 CTCSS DEcode (tone
squelch) board, the PL tone is generated by the microprocessor
itself, rather than a dedicated PL tone chip (MX265). As a
result, the PL tone generated can be slightly off, to a
degree to make certain reed-type decoders used on some repeaters
go nuts. This makes repeater use difficult, if not impossible. If you do
go out and buy the optional FTS-26 board, the tones are
generated by the board, and this should not be a problem.

It turns out that the PL tone is too high in pitch, and this difference
is audible at the 250.3 PL. Yaesu's fix, according to
Yaesu Tech Bulletin 9420 is to increase the size of the
capacitor on the microprocessor crystal to pull the frequency
down, thereby lowering the PL. The mod specifically calls for
C2018 to be changed from 33 pF to 39 pF.

I have not done this yet, as I am awaiting the part from Yaesu.
This mod is built into the factory beginning with lot #12.
Units prior to this will need to be mod'ed or you may just
be lucky. To determine your lot number, look at your serial
number. the lot number is the two digits immediately following
the letter. (i.e. a S/N of 3M078626 would indicate a lot #07)

If you are contemplating buying a unit at a retailer, check the
serial number -- if it is prior to lot #12, test the unit on
a few repeaters and see if your voice drops in and out.
Newer repaters with electronic decode tend not to be as sensitive
to PL frequency mismatch as are old mechanical reed style decoders.

****

Also, to FT-530 owners:

There is an existing INTERMOD fix for the 530. Now, before you
all go and jump to put your units in the mail, let me tell you
what this mod does.

The mod entails changing the first IF frequency of both receivers.
The VHF frequency moves from 15.25 to 17.25 MHz, and the UHF
frequency moves from 47.225 to 44.775 MHz.

What this buys you:

If your INTERMOD problem results from two strong signals that
are mixing in the front end to produce a signal at the frequency
you are trying to receive, this mod will do NOTHING for you.
(e.g. you are listening to 446.00 MHz, and two signals at 452.00
and 458.00 MHz mix to produce a tone at 446.00 MHz, then you are
out of luck).

However, if the problem results from two strong signal
that are mixing to produce the IF frequency, then this may help.

Alternatively, if the problem is really IMAGE response
(you are picking up a station that is 2xIF away from your desired
station), then this MOD will help.

Think carefully and investigate thoroughly what your problem really
is before you send the unit in. The mod does nothing to affect
receive range, nor does it do anything to change RF desense,
overload or other nastiness, just changes the image response
frequency...

A hint in diagnosing your problem... The first IF frequency is
not dependent on the frequency tuned, but rather which receiver is
used. The left receiver uses the VHF IF, while the right receiver uses
the UHF IF. Tuning a UHF frequency in the VHF side uses the VHF IF,
and vice versa.

****

Sorry this post got so long, but info is info.

Excellent advice. The cable to the monitor is often the bad actor.
Many of the better units these days come with clamp-on ferrite "beads"
already attached.

1437. TM-732A Cloning Help ??

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-02 19:26:45 UTC
From: clmorgan@miavx3.mid.muohio.edu
Message-ID: <1994May2.142645.1@miavx3.mid.muohio.edu>
Source record: 267559

Quite a few months ago, I came across cloning instructions
for the TM-732A. It involved a modified modular cable,
connected between the two radios, via their microphone
connectors..

The modular cable wiring I have is as follows:

```
UP ------------------------------- UP
E -------------------------------- E
PTT ------------------------------- DOWN
DOWN ------------------------------- PTT
```

Either end can go to either the master or slave radio.

Anyone know what "E" is? It isn't ground ... Nothing else
on the modular connector looks like it either. According
to Kenwood's service manual, the modular connector is wired
as follows (top-to-bottom):

```
1 --------- UP 5 --------- DOWN
2 --------- 8 vDC 6 --------- TX BAND
3 --------- GND 7 --------- MIC AUDIO
4 --------- PTT 8 --------- MIC GROUND
```

Anybody able to confirm the modular connector wiring as well?

Any other thoughts, suggestions, or wise counsel? I assure
you, your comments will be quite welcome.

>
[drawing and sig deleted]

I too just bought one (MFG lot 25) and it has the jumper. While in Dayton, I got the mod book and the layout is shown for this board. I cut the jumper, and it didn't work; no problem, maybe a strand from the jumper is still there...Well I cleaned that up completely (desoldering station) and still no go. Called Yaesu: 'What Jumper? It should only have a dot of solder.' I described the location of the pads it came from, they walked me through the reset and toggle procedure, and still no go. The radio just ignores it, pretends like the mod never happened. I removed the battery pack and the lithium battery for about half an hour, and tried the sequences again, NO GO!

Anyone have any ideas?

I personally would recommend the Butternut. I have an HF6V with 12/17 and 160 meters added and am a believer in it. I DON'T believe the claims about the R7 and others not needing radials and being equivalent to the Butternut. Right now I am reading a book called Vertical Antenna Handbook by Capt. Paul H. Lee, USN(RET), N6PL published by CQ magazine. I recommend it to really get an idea as to how verticals really work. At least, I recommend it as of chapter 5.

One thing I have noted, any vertical you listed and I have seen advertized is extremely short and inefficient on 80/160 meters because the feedpoint resistance is like 1-10 ohms and the reactance is 300-1000 ohms. Hard to get the antenna current up and to radiate. Check out the book.

Good luck

I tried doing a similar mod for the TM-431A and it didn't work
either.... some guy from finland sent me the proper matrix for that
radio...I haven't performed it yet...looking at the schematic, it seems
that I might be enableing euro repeater offsets instead of the the US 5
mhz offset...

Anyway, check your schematic and find the 431A (non-usa) one and that will
have the diode matrix you need...(I think)(...

This writer is a satisfied user (and registered owner) of CT. Our club uses at least three different versions of it for Field Day and most other contests. The version I have (8.14) provides three different CT.exe files depending on whether you have an 8086, 80286, or 80386 machine. That way you don't have to be stuck with a slow software package after you upgrade to a fast new PC.

I just wish that the phone modem download/upgrade service was still available - after all, I specifically paid for that feature when I bought the program.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 2/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 2 MAY AND FORECAST UP TO 5 MAY

IPS Warning 12 was issued on 26 April and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 076/014

1B. SOLAR FORECAST
03 May 04 May 05 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 080/020

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to minor storm.

Estimated Indices : A K Observed A Index 1 May
Learmonth 23 4443 3335
Fredericksburg 30 25
Planetary 40 34

Observed Kp for 1 May: 1244 5556

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
03 May 35 Active to minor storm.
04 May 25 Unsettled to active.
05 May 20 Unsettled to active.

2C. MAGNETIC COMMENT
Coronal hole induced activity, which was 2 days delayed as expected,
currently in progress.
3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
02 May normal normal-fair poor-fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 May normal normal-fair poor-fair
04 May normal normal-fair poor-fair
05 May normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were 15-30% depressed. Strong spread F was observed during local night, with blanketing sporadic E conditions 11-12 and 14UT.

Observed T index for 02 May: -5

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
03 May 10 About 15% below predicted monthly values.
04 May 20 About 15% below predicted monthly values/near normal.
05 May 25 About 15% below predicted monthly values/near normal.

4C. AUSTRALIAN REGION COMMENT
Further degraded HF comms conditions expected today, with conditions improving on day 2.

: : Has anyone reveived a QSL from the 3Y0PI dxpedition? Just curious. (I
: : haven't.)

: I haven't even sent for one yet.... does anyone hv the Mgr?

As many in the DX community now know, Joannie KA6V and her husband AA6BB
are the QSL managers for the 3Y0PI DXpedition. Very unfortunately,
Joannie passed away last week. What impact this may have on QSLing
is unknown, but surely nobody can complain if there is an understandable
delay. As I understand it, even OM AA6BB was hospitalized a couple
months back with a serious ailment ..... so patience, understanding
and best wishes go to AA6BB.

Warmest 73 de Sandy

: Seems like the perfect time to learn code.

The links are on 40 meters during the day and 75 meters at night. Once or
twice a year the boys on 440 will patch three or four private link
systems together for the fun of it. It gets old fast so they turn it off.

1458. Heil 4 or 5 element??

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-03 02:00:21 UTC
From: penneys@brahms.udel.edu
Message-ID: <2q4b7l$hvp@brahms.udel.edu>
Source record: 267571
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Do you prefer the Heil 4 or 5 element?

My primary interest in using a mike at all is HF contesting. I would assume that the 4 would be the ticket, but I have heard the 5 recommended too.

Rig in use at moment is TS940.

Thanks for your help.

I pickuped a 2 meter IC-27A at Dayton. Seems to be a good little radio
but I can't figure out how to program the memory on it.
Could someone using one of these drop me a couple of lines telling
me how to program frequency's in memory. It's nothing like my kenwood
and so far it will work but can;t get the old freq.'s out of memory and
new one's in. Any help appreciated.

Greater than 2 MeV Electron Fluence for 02 MAY is: 2.3E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Very little activity occurred
during the day, but the sun continues to generate numerous
small centers of emerging flux. Regions 7713 (N07E26) and 7715
(N08W42) showed steady growth during the period. A new region
number 7716 (N02W14) was assigned to newly emerging spots
today.

Solar activity forecast: solar activity is expected to be
low. Recent growth in 7713 suggests that there is a fair chance

for an isolated C-class flare.

The geomagnetic field ranged from unsettled to major storm levels. Minor to major storm conditions dominated from 01/2100Z through about 02/1200Z. Conditions subsided to unsettled to active for the remainder of the day. The disturbance is probably the result of a favorably positioned coronal hole.

Geophysical activity forecast: the geomagnetic field is expected to be active at mid-latitudes and minor storm at high latitudes for the next 12-24 hours due to persistence. Conditions should transition to unsettled to active levels on the second and third days.

Event probabilities 03 may-05 may

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 03 may-05 may

A. Middle Latitudes
Active 50/25/10
Minor Storm 30/10/05
Major-Severe Storm 05/05/05

B. High Latitudes
Active 35/25/10
Minor Storm 30/10/05
Major-Severe Storm 15/05/05

HF propagation conditions were below-normal from the high to the upper-middle latitude regions today. Geomagnetic and auroral substorming has resulted in poor to occassionally very poor propagation over the high latitudes and generally fair to occassionally poor propagation over affected middle latitude paths. Similar conditions are expected to persist over the next 24 to 48 hours before returning to less disturbed levels.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Along the lines of proximity and the guy who bought a tower case, give some thought to getting a side-mount stand. You can use this to mount the CPU on the floor with the floppy towards the top. It is not inconvient when mounted like this.

Before doing this you obviously should do as suggested and try to isolate where the problem is coming from. The case that it is radiating through the chassis can sometimes be cured by the side-mount floor stand.

Last field day our club used FD logging software that I got off the
ARRL BBS. It worked really well and did a really good job for us. I
don't remember the name of it but there is only a couple of FD packages
on there.

1465. Re: Vertical Antenna Recommendations?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-03 06:30:48 UTC
From: as041@FreeNet.Carleton.CA
Message-ID: <Cp7rFC.JKy@freenet.carleton.ca>
Source record: 267575

In a previous article, t1terryb@cascade.ens.tek.com (Terry Burge) says:

>One thing I have noted, any vertical you listed and I have seen advertized
>is extremely short and inefficient on 80/160 meters because the feedpoint
>resistance is like 1-10 ohms and the reactance is 300-1000 ohms. Hard to
>get the antenna current up and to radiate. Check out the book.
>
Because of space limitations I use a ground-mounted 12AVQ (20, 15 and 10m)
and while it gets out fine and hears reasonably well on those bands, even
though I can get it look good to the transceiver with a transmatch, it
will not radiate more than a dozen or so miles on 40 and 80.

Cheers and 73,
Rob

For contesting (and running barefoot in general), I prefer the Heil 4
element. It just seems to give my signal a bit more punch, even
without the compressor on.

I use mine with my Icom 737, which needs a pre-amp to get the Heil up
to a decent signal level. Check to see if your rig needs one if you
go with a Heil.

Karl, I tried to send e-mail but it bounced as undeliverable.

Did you try calling the CT bulletin board at 508-460-8877? You can
still download the latest version from there. Apparently, 8.53 is
going to be the last release of version 8.

1471. High Altitude Balloon Flight Synopsis

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-03 12:20:28 UTC
From: rickvg@cscns.com
Message-ID: <C6anjSEHGAjM057yn@cscns.com>
Source record: 267631

```
------------------------------
FLIGHT SYNOPSIS OF EOSS-16
------------------------------

Launch date: May 1, 1994
Launch time: 15:05 UTC
Launch site: Thunder Ridge Middle School
Aurora, Colorado USA
Launch coordinates: 39 deg 37.383 minutes NORTH
104 deg 44.127 minutes WEST

Touchdown time: 18:03 UTC +- 5 minutes
Touchdown site: 1.31 Miles South East of Woodrow, Colorado USA
Touchdown coordinates: 39 deg 58.223 minutes NORTH
103 deg 35.012 minutes WEST

Touchdown bearing from launch: 68 degrees
Touchdown distance from launch: 65.8 Statute Miles

Maximum Altitude: 95,000 feet
Maximum Speed: 50.5 mph

Payload Systems:
ATV - 426.250 MHz
Beacon - 147.555 MHz
Telemetry - 144.340 MHz
GPS sonde - approximately 400 MHz (commercial system test)
Ozone Detector downloaded on telemetry frequency
Pressure Sensor used to determine altitude
Temperature sensors (internal and external)
LORAN-C position determining receiver

-------------------
Flight Highlights
-------------------

The flight of EOSS-16 was a great success from launch to pick-up by our
great preparation, launch, tracking, and recovery teams.

The ozone experiment conducted by the students from Ranum High School
performed perfectly throughout the flight. The students gathered some great
data. Congratulations to EOSS member Andy Kellett N0SIS, our student liaison
for this flight, for getting everything operational with many hours of hard
work.

We are hoping that the students will present their findings at the next
EOSS membership meeting (5/10/94). These meetings are held on the second
```

Tuesday of each month at the Castlewood Library at the intersection of Uinta and Arapahoe (just west of I-25) in Castlewood, Colorado. They start at 7 P.M. local time.

The ground station operations were coordinated by Brian Thomas, N0VSA. All systems were operating on gasoline driven AC power generators for this flight. These generators were provided by Amateur Radio Emergency Services (ARES) district 22 in Colorado.

FAA Liaison for the flight as well as technical assistance was performed by Mike Manes, W5VSI.

The balloon preparation team headed by Merle McCaslin, K0YUK, ran into no significant problems.

The weather was perfect for the launch with very calm ground winds. Early morning weather reports from the Rawinsonde (RAOB) data obtained from the National Weather Service via WeatherBank Info Service were incomplete only listing winds to 45,000 feet. Using Paratrak (Bill Brown WB8ELK's balloon flight prediction software) with these incomplete readings we predicted a touchdown at 69.2 miles from launch site on a bearing of 68.8 degrees. If you check the actual data above you'll be amazed at the accuracy of this prediction. However, because of the incomplete data, interpolation was used to estimate (incorrectly) the high altitude winds and we officially used a figure of 48.7 miles at an azimuth of 63.9 degrees to position our tracking and recovery teams. High altitude winds were stronger than anticipated.

The W6ORE flight controller aboard the payload performed to near perfection throughout the flight compiling and transmitting both standard EOSS packet telemetry and an Automatic Position Reporting System (APRS) location packet. Loran-C lost lock on ascent at about 30,000 feet but we were able to regain lock at about 35,000 feet and maintained lock throughout the rest of the flight.

ATV got some great shots. We may have even captured the balloon bursting on video tape. All at the ground station were very impressed!

The APRS packet tracking program worked perfectly during the entire flight. An APRS station was running at the ground control station and provided a graphic map display of the location of the balloon during its flight over eastern Colorado. Larry Cerney and Rick von Glahn ran APRS as well as GPS in their vehicles during the recovery operations. It was of great assistance in the hunt. We should soon have an HST file (used by APRS) ready for the flight of EOSS-16.

The payload was recovered about 3 hours after launch. George Reidmuller and Paul Ternlund ran a tight ship. Under their skilled leadership were RDF stations:

ALPHA - Paul Ternlund WB3JZV (computerized triangulation station)
BRAVO - Geroge Reidmuller N0NJM (net control), Marty Griffin WA0GEH
CHARLIE - Dan Meyer N0PUF

DELTA - Dave Galpin KB0LP
ECHO - Bob Ragain WB4ETT, Dawn Ragain N0QCW, Colleen Ragain N0QGH
FOXTROT - Greg Burnett K0ELM
GOLF - Ian Zahn KB0HKY
HOTEL - Rick von Glahn N0KKZ and Bob Sacco
INDIA - Larry Cerney N0STZ

Jack Crabtree AA0P was also in the field relaying packet data and chasing the payload with GPS.

This was probably the best radio direction finding (RDF) experience in EOSS history. Using LORAN-C as a benchmark, bearings from the RDF stations were shown to be the most accurate ever for the group as a whole.

While the LORAN-C was helpful as usual, it was the RDF data that provided the best information to lead the recovery teams to the payload. Paul Ternlund and Bob Ragain were first to the site. Paul had a slight advantage as he arrived on the road closest to the payload and was rewarded with the pleasant job of announcing the discovery of the package. The various payload, parachute and support lines were left in place for the inspection of the other members of the recovery team at their arrival.

The payload survived the flight and landing and was ready to fly again with only some minor repairs to the Loran-C antenna.

We would be interested in hearing from anyone who copied any of our transmissions. Send your QSLs to:

Is there any particular type of computer / operating system combination this needs to run? Is it in binary or source format? If source, what language does it use (or do we just assume it's in C?), and does it use any special libraries (e.g., curses, X11 libs, etc.)?

I've been looking for a good X-based satellite tracking program to run here under Linux (a freeware, Posix-based UNIX)---is this program what I've been looking for?

Later,

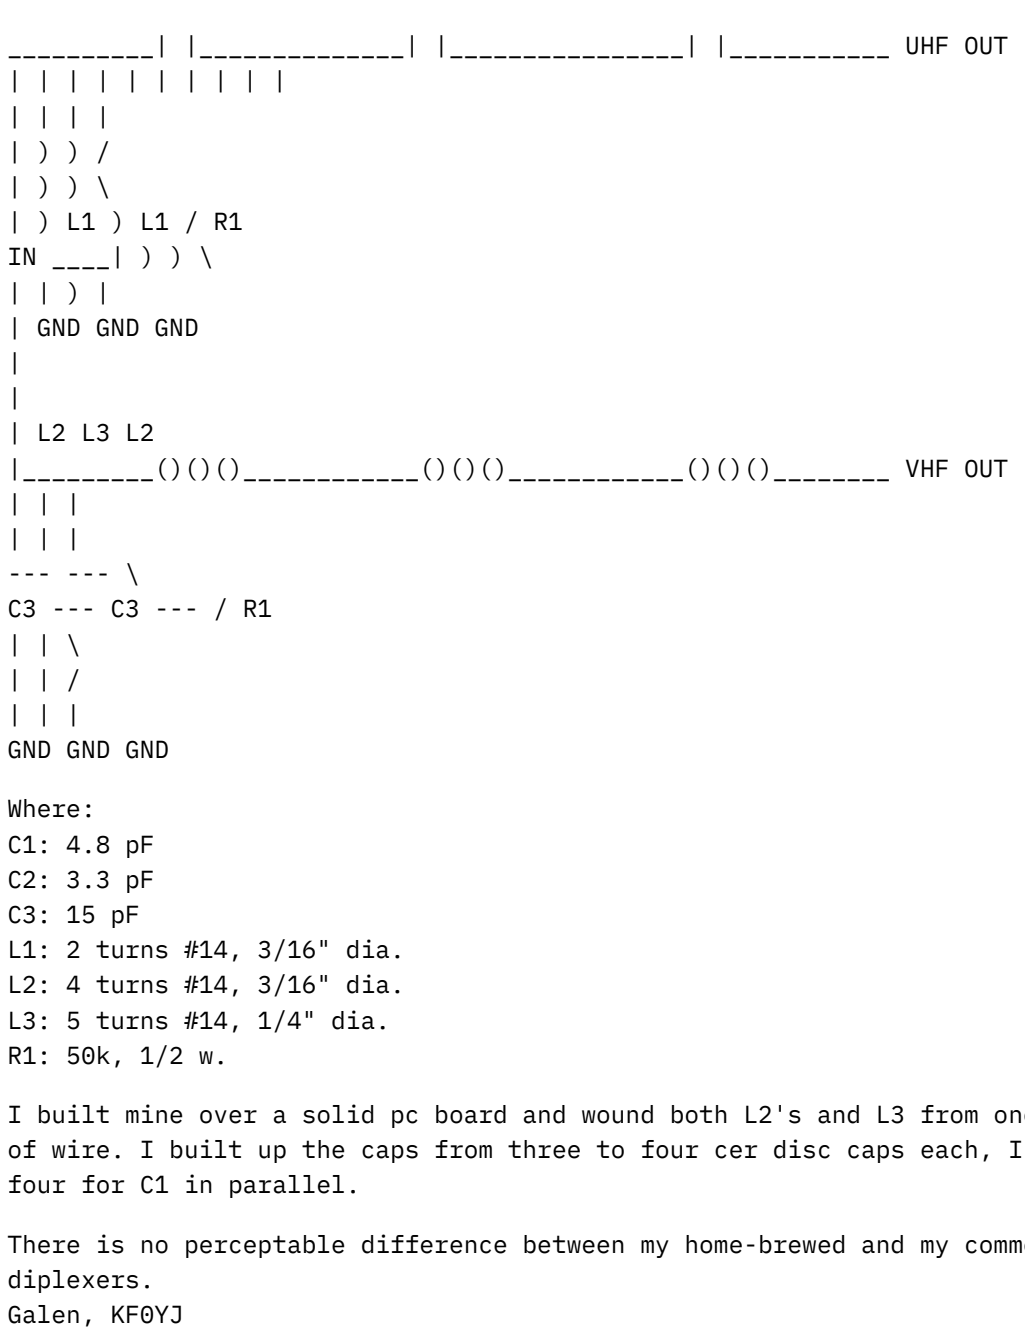
In article <Cp6MMo.73t@ireq.hydro.qc.ca> vaillan@ireq.hydro.qc.ca writes:
>I would like to know how to make a diplexer 2m/70cm.

From OCT 1991 QST:



Where:
C1: 4.8 pF
C2: 3.3 pF
C3: 15 pF
L1: 2 turns #14, 3/16" dia.
L2: 4 turns #14, 3/16" dia.
L3: 5 turns #14, 1/4" dia.
R1: 50k, 1/2 w.

I built mine over a solid pc board and wound both L2's and L3 from one piece of wire. I built up the caps from three to four cer disc caps each, I used four for C1 in parallel.

There is no perceptable difference between my home-brewed and my commercial diplexers.
Galen, KF0YJ

1474. Anyone interested in talking about frequency standards?

Howdy --

I've been interested for a while in time and frequency measurement, and have been collecting bits and pieces of equipment.

At the Hamvention last weekend, I finally found my dream: a rubidium standard. It's a little Efraton thing (part number 100323-101 for what that's worth) and it seems to work.

But one problem is that it only has a single 10MHz output, and my other equipment all wants either 1MHz or 100kHz inputs. So, I need to design some divider and distribution stuff -- and I'm clueless about how to minimize phase shift and jitter, and how pure a sinewave output I need to shoot for (or will my other equipment be happy with squarewave input?).

To get to the point, I'd be interested in corresponding with anyone out there who's knowledgeable about frequency standard/measurement systems, so I can get this thing lashed up properly.

Thanks...

John Ackermann AG9V

1477. New FCC amateur radio licenses

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-03 14:50:42 UTC
From: drumhell@claudette.nrl.navy.mil
Message-ID: <Cp8EKI.2Ju@ra.nrl.navy.mil>
Source record: 267639
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I've noticed that the recent amateur radio licenses come in two parts:
the traditional wallet document, and one that can be framed to be hung in
the shack. I was last issued a license in 1990 that was printed with an
impact printer, and it's a little hard to read. It appears that the new
licenses are laser printed.

Question: Can I ask the FCC for the new license? I'd like to get the
part you can frame. (Somehow I feel the answer is going to be `no.')

1479. How to program a Yaesu FT530 HT

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-03 15:10:51 UTC
From: stokes@cmc.ca
Message-ID: <1994May3.151051.21942@venus.cmc.ca>
Source record: 267653

This might interest some... please send suggestions,
corrections to me.

Thanks,
Peter

Peter A. Stokes _____ Voice & Voice mail: (613) 545-2923
Engineering Applications Support _____ FAX: (613) 548-8104
Canadian Microelectronics Corporation _____ Net: stokes@cmc.ca
Kingston, Ontario, CANADA _____ Radio: VE3ZXT @ VE3CDY

------8<-------cut here------------------------------

How VE3ZXT programs his Yaesu FT530 HT

(These instructions are intended to help remind me on how I
program my FT530 and are not a substitute for reading the
manual!)

HINTS:

0. To turn the radio on, push and hold (for 1/2 a
second) the orange button on the left side.

1. If you get into a strange mode or display, hit PTT
as this usually clears it. The radio may display
"ERR" for a moment.

2. To switch from band to band (left to right and back),
use the "BAND" button.

3. If you want the backlight to stay on while using the
radio, enter FM -> LAMP. The LAMP button is just
below the PTT button.

4. The radio is capable of any combination of scanning,
searching or being idle on both sides. For example,
one can be scanning on the left side and carrying on a
QSO on the right side. To make the radio scan, place
the radio on any channel (push MR until the channel
indicator does not have multiple small arrows) and
then push and hold either arrow button. It is also
possible to make the radio alternate scan (scan on the
left, then right, then left, ...).

5. Push the Monitor (Burst) button (above PTT) to break
squelch momentarily. Push and hold the same when the
radio is off to see the seconds display on the clock.

PROGRAMMING GUIDE:

0. Ensure the radio has suitable power and lithium
battery installed.

1. Reset the radio by holding the MR and VFO buttons
as you power up the radio. This will clear all
settings, time, channels, etc.

2. Enable the extended receive and transmit modifications
by holding both arrow keys while powering up the radio
again. Note: extended Rx and Tx also require a
hardware modification not discussed here.

3. Set the clock: FM -> REV to see the clock
FM to go into set mode
(then see page 51 of the manual)

Hint: set the radio in UTC to avoid time zone and
time change hassles.

4. Enable ARS (Automatic Repeater Shift) on both bands.
This will automatically set the repeater offset to the
correct frequency count and direction +/- when you
program in a frequency. The radio understands the
basic amateur bandplan and will not set an offset if
you enter a simplex frequency (e.g 146.520).

FM -> 0 -> 6 -> FM -> 6

and again for the other band

FM -> 0 -> 6 -> FM -> 6

5. Set the alternate display (when only working one band)
to display battery voltage (a nice feature IMHO!):

FM -> 0 -> FM -> BAND

and again

FM -> 0 -> FM -> BAND

Alternative displays include blank (---) and clock.

6. Set transmitter default power to high:

FM -> 3

7. Set scan resume mode on both bands to "P" for pause
(as opposed to "5" which causes the radio to continue
scanning after five seconds on one signal):

FM -> 7 -> FM -> 7

and again for the other band

FM -> 7 -> FM -> 7

8. Set automatic power off if desired:

FM -> 0 -> 3 -> 3

This feature can be useful if you want to conserve battery power or a pain if you are using the radio as a scanner or for packet monitoring. Note that the radio will shut itself off when battery voltage reaches near 5.5volts, eliminating the possibility of over-discharging your nicads. As the radio nears this shutdown condition, the display will alternate between normal functions and a battery voltage display.

9. Set ABS to the desired ratio. ABS is the Automatic Battery Saver and causes the radio to go into a low-power consumption sleep mode if it is not used for a few seconds. In this mode, the radio remains inactive (conserving power) except for periodic 30 millisecond samples of the frequency being monitored. ABS may cause you to miss the first split second of a transmission and can cause problems for the same reason when the radio is being used for packet. Otherwise, it is a good tool. If I had the money, my car would have ABS too (but that is a different kind :-) To set ABS, enter:

FM -> 4

and then one of the following keys

1 for 10ms sleep, 30ms sample duty cycle
2 for 20ms sleep, 30ms sample duty cycle
3 for 40ms sleep, 30ms sample duty cycle
4 for 80ms sleep, 30ms sample duty cycle
5 for 160ms sleep, 30ms sample duty cycle
6 for 320ms sleep, 30ms sample duty cycle
7 for 640ms sleep, 30ms sample duty cycle
8 for 1.28s sleep, 30ms sample duty cycle
9 for automatic ratio based on recent usage
0 for ABS off

10. If desired, enable Tx Save feature. This feature will adjust transmitted power based on the signal strength of the incoming reception. As a rule, amateurs should always be using the minimum power necessary to maintain their QSO. This is a lazy approach. To enable Tx Save:

FM -> 0 -> 4

and repeat for the other band

FM -> 0 -> 4

11. Program in your favorite frequencies in all the channels. There are 41 per band: 38 channels plus one CALL channel plus one U (upper channel) plus one L (lower channel). If you have enabled the extended receive and transmit, you will find that a wide range of UHF and VHF frequencies can be intermixed on each side. It is also possible to enter 0.8 GHz frequencies in the UHF side! If the frequency display is flashing, the PLL has unlocked and the radio is unable to tune that frequency.

The basic sequence to enter a frequency in a channel is:

VFO enter into either VFO on the band desired

146940 to enter 146.940 MHz

FM (hold for two seconds)

(use arrow keys or dial to select channel to store frequency in)

FM

The frequency is now stored. After a second or two, the radio mode returns to the VFO. Repeat this process as necessary to enter all frequencies.

Refer to the manual on the programming of the CALL, L and U channels. These are used for a quick recall of the CALL frequency, Lower limit and Upper limit when searching, respectively. Note that if a CTCSS tone is stored in a U or L channel, that tone will be used for decoding during search mode if searching is initiated from that channel.

To set a CTCSS decode frequency on a given channel:

set radio on that channel

FM -> 2

turn dial to desired PL tone

2

Refer to the manual on setting a decode frequency or scanning for a decode frequency.

To set a CALL channel frequency:

VFO enter into either VFO on the
band desired

set frequency, offset and CTCSS tone

FM (hold for two seconds)

CALL

The radio is capable of receiving in AM mode and has extended receive capability down into the aircraft band. Although not discussed in the manual, the radio can store the mode (AM or FM) in each channel. To store a frequency in AM mode:

VFO enter into either VFO on the
band desired

set frequency

FM -> 0 -> FM -> VFO (enables AM mode)

FM (hold for two seconds)

use arrows or dial to select channel

FM

Note: the VFO will remain in AM mode until you enter the sequence again (FM -> 0 -> FM -> VFO) or the radio is made to listen to an FM channel. Remember to return the VFO to FM mode after setting an AM station otherwise you may end up programming all remaining channels in AM mode (annoying!).

Important: If you enter any frequency other than an amateur radio frequency, make sure you manually set the offset to - or + so that if you are listening to the frequency and accidentally PTT, you will not transmit on that frequency (e.g. a police frequency!).

12. Set IBS (Intelligent Band Select) if desired. This makes the radio automatically switch to the side, when you PTT, that last had a transmission. To set:

FM -> 0 -> BAND

Note: both bands must be displayed to set IBS.

13. Set DTMF keypad transmit hang time to on:

FM -> 0 -> FM -> 1

This makes it possible to enter a DTMF number sequence (e.g. a phone number during an autopatch operation) without having to hold PTT beyond entering the first digit.

Please send suggestions/corrections to me,

From: nsayer@quack.kfu.com
Message-ID: <ggNwZ5C@quack.kfu.com>
Source record: 267643

Hi. I'm an Advanced class ham. I was once a VE (I still have the badge and it hasn't expired, so I suppose I still am), but as an Advanced all I can do is participate in giving 1(A), 2 and 3(A) (if memory serves). For this reason alone (my prefered HF mode is F1B, so I don't care about the extra 125 kHz of real estate and I don't plan on launching a satellite anytime soon) I have decided to try for 20 words again. I don't mind telling anyone that my current code speed is about 7 wpm, but it's not like I need to learn the alphabet over again. What's the best tape or perhaps series of tapes to use to prepare for 20 (I have a 20-30 minute commute each morning, so that seems like the best opportunity to try and do something about my code speed since I'm not currently on HF)?

I don't think you'll have any problem. If you justrenew your license (ie, turn in a new Form 610 requesting a new license), I think you'll get it with no problem.

Just my opinion, though...

They are nice, aren't they? The answer is, it can be done. All you need to
do, is submit a form 610, and request a duplicate. My wife lost her's, and it
came in the mail in about 4 weeks.

1489. Looking for big heatsink supplier

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-03 18:07:46 UTC
From: depolo@eniac.seas.upenn.edu
Message-ID: <2q63ti$jml@netnews.upenn.edu>
Source record: 267648
Cross-posted to: sci.electronics,rec.radio.swap,rec.radio.amateur.misc

The supplier doesn't have to be big, just the heatsinks.

What I'm looking for is a number of large heat sinks for home-brew high power solid state power amplifiers. The PA's will be rack mounted, so something that would be 19"W x 24"H x 4"D when rack-mounted would be in the ballpark. Anybody know of any good suppliers of big heatinks?

1490. Six Meter Opening on Saturday

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-03 18:34:13 UTC
From: cheech@med.unc.edu
Message-ID: <2q65f5$cvb@bigblue.oit.unc.edu>
Source record: 267656

Greetings,

I thought someone would mention the opening on six that happened on Saturday. My participation was limited to listening since I haven't gotten around to fixing a little transmitter problem yet. I must do that soon.

I flipped on my old Mastr Pro about 8:00 PM EDT and a few minutes later it began to burp as some weak signals broke the squelch on 52.525. Within ten minutes traffic was getting heavy and after about an hour the radio settled into a screech and roar pattern as everyone tried to talk at once. This lasted for about half an hour before I finally started hearing one side of two or three conversations at a time. Once I even heard both sides of a QSO.

Most of the stations I heard from here in central North Carolina were 8's and 9's, with Wisconsin and Illinois the most reliable. A few Ohio stations came in off and on. I also heard a couple of 0 stations and considered eating the mike when I heard most of one call from a VE. I've got to get that transmitter fixed.

The band finally died about midnight and has been dead ever since when I was listening. The sporadic E season has arrived.

Take it easy,

Greg Young AC4YT
cheech@med.unc.edu

1491. Re: New FCC amateur radio licenses

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-03 18:42:54 UTC
From: rogjd@netcom.com
Message-ID: <rogjdCp8pBI.GLr@netcom.com>
Source record: 267651
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

If I'm not mistaken, if you simply send in the form 610 to renew your license (which is free) they will send you the new format, even if 10 years isn't up. Or a change of address, for that matter.

1492. Re: PacketCluster Commands

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-03 18:57:56 UTC
From: reisert@sttng.mlo.dec.com
Message-ID: <2q66rk$sft@nntpd.lkg.dec.com>
Source record: 267659

Here is a list I put together a while ago (early 1992) - it should
have most of the important commands:

PacketCluster (tm) V5.1
(c) 1986-1991, Pavillion Software

The available PacketCluster commands are:

ANNOUNCE - make a general announcement to all connected stations
BYE - bye, disconnect from the PacketCluster
CONFERENCE - enter conference mode
DELETE - delete mail message
DIRECTORY - list active mail messages
DX - DX spotting info announcement
EXECUTE - execute your personal command procedure
FINDFILE - locate file(s) on the system
HELP or ? - help (displays this listing)
HELP command - display help for that particular command
READ - read mail message
REPLY - reply to the last-read mail message
SEND - send mail message
SET - set user-specific parameters
SHOW - display various PacketCluster information
SWITCH - change to alias call
TALK - talk to specified station
TYPE - display a particular file on the PacketCluster
UPDATE - update a custom database
UPLOAD - upload a file to the PacketCluster
WWV - log/announce WWV propagation information
WX - announce weather conditions

Command: ANNOUNCE This command is used to send a text string out to all
stations which are connected to the PacketCluster. If you
wish to make announcement to only those users connected to
a particular PacketCluster node, you can specify the call
of the node on the command. The ANNOUNCE command defaults
to the local node; a cluster-wide announcement requires
using the /FULL qualifier on the command. You can also
specify a distribution list as a qualifier. The ANNOUNCE
command may be used while in Conference Mode or Talk
Mode by prefacing it with an asterisk (*).
Syntax: Announce msg
Announce/call msg
Announce/Full msg
Announce/distro msg

Command: BYE Bye command informs the PacketCluster that you wish to
disconnect. This is the recommended way of disconnecting,
instead of using the D command to your TNC.
Syntax: Bye

Command: CONFERENCE This command places you into Conference Mode. You will
see all input from any other station that is also in
Conference Mode. Note that by default, you are put into
the local conference on your PacketCluster node. A
ctrl/Z or the text /EXIT will cause you to leave
Conference Mode and return to the PacketCluster command
level. When in the local conference, your call will have
a plus sign (+) next to it in the SHOW/USERS display.
Syntax: CONFERence
*** Note ***
While in Conference Mode, you are able to do the following
PacketCluster commands:
ANNOUNCE - make a general announcement to all stations
DX - DX spotting functions
TALK msg - send a one-line message to another station
SHOW/CONFIGURATION - display cluster configuration
SHOW/DX - show DX log
SHOW/USERS - show what stations are connected
SHOW/WWV - show WWV propagation information
WWV - announce WWV information
This is done by prefacing the command with an asterisk (*):
*DX, *T, *ANNOUNCE for example.

Command: CONFERENCE/FULL This command is identical to CONFERENCE except
that the conference is global throughout the
cluster. Users in global conference mode are
designated with an asterisk (*) next to their
call in the SHOW/USERS display.
Syntax: CONFERence/Full

Command: DELETE The DELETE command is used to delete mail messages on the
PacketCluster. If no message number is specified, the last
mail message read will be deleted; otherwise, the one
specified by message number.
Syntax: DElete
DElete message-#,message-#,...

Command: DIRECTORY This command is used to display a list of the current
mail messages on the PacketCluster node to which you
are connected. A hyphen (-) next to a particular mail
message number indicates that the message has been read
by the station to which it was addressed, a plus sign
(+) indicates message set to noauto_delete, an asterisk
(*) indicates both read and noauto_delete, and a "p"
indicates a private message.
If you specify a call on the command, you will see
messages only sent by or to that station.

Syntax: DIRectory/qualifier
DIRectory callsign

Command: DIRECTORY/ALL Display all active mail messages. By default, only
the five most-recent messages, or all since your
last use of the DIRECTORY command (whichever is
greater) will be displayed.

Command: DIRECTORY/BULLETIN
Display mail messages addressed to ALL.

Command: DIRECTORY/NEW Display all mail messages which have been sent since
your last use of the DIRECTORY command.

Command: DIRECTORY/OWN Display mail messages which are addressed to you or
were sent by you.

Command: DIRECTORY/nn Display the nn most-recent mail messages.

Command: DX The DX command allows you to announce DX spotting
information to all other stations which are connected
to the PacketCluster. Also see command SHOW/DX. While in
Conference or Talk Mode, use *DX.
Syntax: DX frequency callsign misc-info
where frequency is of the format 14025.10, for example.
Misc-info should be kept brief as the system will add
the date and time after it. Misc-info is optional.

Command: DX/call The DX command with the /call qualifier allows you to
announce DX spotting information and to credit the DX
spot to the station whose callsign you specify.
Syntax: DX[/call] frequency callsign misc-info
Example: DX/K1GQ 14001.1 3C0A

Command: EXECUTE This command is used to execute your private command
procedure which has been uploaded with UPLOAD/USERCMD.
Syntax: EXECUTE

Command: FINDFILE This command is used to locate files on the PacketCluster.
You may specify either a full file name or a partial name
with wildcards (*). The system searches all defined file
areas for the file.
Syntax: FIndfile filename or filename-mask
Example: FINDFILE ARRL.DAT
FINDFILE ARRL*.*

Command: READ This command is used to read a mail message which is shown
in the DIRECTORY display. A READ without a message number
will read the oldest unread mail message addressed to you.
Any mail message may be read if the message number is
specified on the READ command.
Syntax: Read
Read message-#

Read/nopage message-#

Command: REPLY This command is used to reply to the last mail message which
was read. The subject of the resulting message will be the
same as that of the previously-read message with an RE:
preceding it. You may also specify a message number to
reply to, so that reading it first is unnecessary.
Syntax: REPly
REPly msg-#

Command: REPLY/DELETE
This variation of the REPLY command does the same function
but also deletes the messages to which you are replying.
Syntax: REPly/Delete

Command: SEND This command is used to send a mail message to another
station. You will be prompted for the station being sent
to, the subject, and the message. The mail message may be
terminated with either a ctrl/Z or the text /EXIT. If you
wish to cancel the mail message, send a ctrl/Y to the system.
The /PRIVATE qualifier sends a private message; the
/NOPRIVATE qualifier sends a public message. The /RR
qualifier requests a return receipt, so that when the
addressee reads the mail, a confirmation is returned to the
sender.
Syntax: Send
Send/Private
Send/NOPrivate
Send/RR

Command: SET The SET command is used to set user-specific options on the
PacketCluster.
Syntax: SEt/qualifier

Additional help available for the following SET qualifiers:
/ALIAS /ANSI /BEEP /DX_ANNOUNCEMENTS
/FILTER /HERE /HOME_NODE /LOCATION
/LOGIN_ANNOUNCEMENTS /LOGOUT_ANNOUNCEMENBTS
/MAIL_ANNOUNCEMENTS /NAME /NEED
/NOALIAS /NOANSI /NOBEEP /NODX_ANNOUNCEMENTS
/NOFILTER /NOHERE /NOLOGIN_ANNOUNCEMENTS
/NOMAIL_ANNOUNCEMENTS /NONEED /NOPRIVILEGE
/NOTALK /NOWWV_ANNOUNCEMENTS /PAGE
/PRIVILEGE /QTH /TALK /WWV_ANNOUNCEMENTS

Command: SHOW The SHOW command is used to display certain information
on the PacketCluster.
Syntax: SHow/qualifier

Additional help available for the following SHOW qualifiers:
/ANNOUNCE /ARCHIVE /BULLADDR /BULLETINS
/CLUSTER /COMMANDS /CONFIGURATION /DISTRO

/DX /EXCLUDE /FILES /FILTER
/FORWARD /HEADING /INACTIVITY /LOCATION
/LOG /LOGON_MESSAGES /MUF /NEED
/NOTICE /PREFIX /STATE /STATION
/SUN /TIME /USERS /VERSION
/WWV /WX

Command: SWITCH This command switches your connection between your normal
call and an alias call that you have specified with a
SET/ALIAS command.
Syntax: SWITCH

Command: TALK The TALK command is used to talk to various stations
which are connected to the PacketCluster. There are two
types of TALK: Talk Mode to another station, and a one-line
Talk function.
Syntax: Talk call Talk to the specified station. This provides
one-way talk capability to that station. If
that station wants to communicate back, they
must also do a T command. A ctrl/Z will only
terminate your side of the talk.
Talk call msg This allows you to send a one-line message to
the specified station. It does NOT put you
into talk mode and hence, no ctrl/Z is needed
to terminate it.
Note: This type of Talk is also available from
within Conference mode by prefacing the T
with an asterisk (*T).
*** Note ***
The following commands are available from within Talk
Mode: DX, SHOW/DX, ANNOUNCE, TALK (one line talk to another
station), SHOW/USERS, and SHOW/WWV by prefacing them with an
asterisk (*).

Command: TALK/TIMESTAMP This command instructs PacketCluster to timestamp
the one-line message you are sending to the
specified station.
Syntax: Talk/Timestamp call message

Command: TYPE This command is used to display a file which has been
uploaded to the PacketCluster. The files which are available
may be shown by doing a SHOW/FILES, SHOW/BULLETIN, or
SHOW/ARCHIVE. The qualifier must be the same as that on the
SHOW command. If no qualifier is specified, it is assumed
the file resides in the /BULLETIN area.
Syntax: TYpe/area filename
TYpe/area/nn filename (displays on nn lines of file)
TYpe/USERCMD (displays personal command file)

Command: UPDATE This command is used to update a database which has been
setup by the sysop. You will be asked for a key value,
followed by the text which should be associated with this

key value. Databases which have been defined on your system
may be displayed with the SHOW/COMMANDS command.
Syntax: UPDATE/database
Example: UPDATE/QSLNEW
Enter key value:
1A0KM
Enter text. Terminate with ctrl/Z or /EXIT ...
QSL 1A0KM via I0IJ
/EXIT

Command: UPDATE/APPEND The APPEND qualifier instructs PacketCluster to
add your new text to the current entry which exists
in the database.
Syntax: UPDATE/database/APPEND

Command: UPLOAD This command is used to upload files to the PacketCluster.
UPLOAD without a qualifier, or with the /FILES qualifier
will upload the file to the files area and will be shown
on subsequent SHOW/FILES commands. The /BULLETIN qualifier
will upload the file to the bulletin area and will be shown
on subsequent SHOW/BULLETIN commands. To upload a personal
command procedure, use the /USERCMD qualifier.
Syntax: UPload filename
UPload/Bulletin filename
UPload/Files filename
UPload/Usercmd

Command: WWV This command allows you to announce and log WWV propagation
information. To display previously-logged information, use
SHOW/WWV. In Conference or Talk Mode, use *WWV.
Syntax: Wwv SF=xxx,A=xx,K=xx,forecast

Command: WX This command allows you to announce weather conditions to
the local cluster users. If a cluster-wide announcement is
desired, use WX/FULL.
Syntax: WX information
WX/FULL information

1496. Idea, 10-10 members....

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-03 19:10:20 UTC
From: wb9omc@constellation.ecn.purdue.edu
Message-ID: <wb9omc.767992220@constellation.ecn.purdue.edu>
Source record: 267652
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew,rec.radio.amateur.policy,rec.radi.amateur.space

I'd like to gauge the interest among members of 10-10 International who
are on the Internet for a group, possibly called:

rec.radio.amateur.1010

The purpose of the group would be multiple:

1) to help disseminate information of general interest to 10-10 members
who have access to Internet.

2) to help 10-10 members set up skeds, nets and other communications events.

3) to help develop interest in not only 10-10 International but to maintain
interest in 10 meters in *spite* of the current lull in the band.

4) to help develop computer operating aids for 10-10 contests and
paperchasing.

5) to serve as one focal point for 10-10 members to discuss the organization,
contest rules, awards rules, etc.

6) other future purposes realted to Amateur Radio and 10-10.

****

I think that emailing me would probably be preferred to clogging up
a number of newsgroups with "me too!" kinds of mail.

If you are interested or have a *brief* thought on the subject, please
email:

wb9omc@harbor.ecn.purdue.edu

flames and/or mail bombs will be ignored, deleted, /dev/null'ed, etc. :-)

If interest seems positive enough, I will make some contacts with the
officers of 10-10 to find out in what ways, if at all, they would
like to make contact and maintain contact with such a newsgroup.

I have a couple of questions on recip. licensing. My wife will be travelling on business to England this summer and wondered if she should take her hand held with her? She is a tech plus. What arrangements does she have to make to do so and will her radio (2 meter) cover the frequencies/shifts/tones used in the U. K.?

Second question. We are probably going to charter a sailboat in the Virgin Is. this summer and the same question comes up. How do we get recip. licensing privleges in the Brit. Virgin Is. ??

Thanks,

Jim.

Yes, you can. My old impact license was set to expire in 1998, but I wanted a good looking laser-printed license, so I sent in for a renewal. This was two years ago when I did thig. I recieved back a great looking license with a new expiration date set for Feb. 14, 2002.

Just send in a 610, a copy of your current license, and check the box that says "renew" license.

1500. still looking for project ideas

Newsgroup: rec.radio.amateur.misc

I am currently finishing my junior year in electrical engineering. Next year, I will be working on a "senior project" with at least one other student. Taking a look ahead, we're trying to figure out some options for projects that we could do.

We'd like it to be in the are of electronics. Audio applications, signal processing, waveform modification, signal generation, filtering, etc. I don't know what else... so many different things, we hardly know where to start.

Other options that we'd like to consider are those in the communication electronics area. We'll be having communic. theory and electronics classes next year, so right now, we don't have much to go on in that area. I am an amateur radio operator. Something dealing with that would be really great!

Other areas of interest that might generate a good project would me some digital / electronics combination, applications dealing w/ transistors as switching (not in a power situation, but rather small things).

This project lasts two semesters. In the fall we finalize our project. Write up some designs, present the project, make a "project request" or something like that. Then, by Dec., have it ready to put together. Starting in Jan., we build a prototype, fix it, get it to work (ie. re-design and re-design and..). Finally, we'll end the semester by writing final reports, documentation and doing more presentations.

We'd like any ideas for projects that you think would be interesting, obtainable, and fit the idea of this "senior project."

___PLEASE____ if you've got any ideas, send some email to me. Just give us a couple of ideas that you might have. I'll post a summery to the list if I get some responses.

Try around 50.125 USB. It's been open off and on for a couple weeks now.
I worked Florida from Colorado, and I've heard Ore and Wash occasionally.

I have three Heil headsets. Two of the open-air style jobs, one with the
#4 and one with the #5. I also have the newer closed-style headset with
the #5 element. I think overall, I like the #5, even for contesting.
I typically run about 10 dB of compression, and it seems that with
the compression on, that the wider frequency response element is more
noticible in a pileup. Maybe it lacks the (industry buzzword follows)
"punch" that the DX element has, but from what I hear listening to myself
on the monitor and on the DVR, I like the #5 better. Rig on this end is
also a TS-940.

You may have to go to HF for that. There may be some private repeater
clubs that may have links along the west coast or clubs with a HF rig tied
into the system...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 3/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 3 MAY AND FORECAST UP TO 6 MAY

IPS Warning 12 was issued on 26 April and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 074/011

1B. SOLAR FORECAST
04 May 05 May 06 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active, with brief minor
storm periods 12-15UT.

Estimated Indices : A K Observed A Index 2 May
Learmonth 24 4344 5432
Fredericksburg 29 41
Planetary 45 42

Observed Kp for 2 May: 5654 4346

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 May 28 Unsettled to active.
05 May 25 Unsettled to active.
06 May 25 Unsettled to active.

2C. MAGNETIC COMMENT
Coronal hole induced activity remaining in progress.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
03 May normal normal-fair fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 May normal normal-fair fair
05 May normal normal fair
06 May normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near normal to 20% enhanced.

Observed T index for 03 May: 49

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
04 May 30 Near predicted monthly values.
05 May 25 Near predicted monthly values.
06 May 25 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

That rose may be a weed if it's in the middle of the garden, but if you look at the entire garden from afar, you won't be able to tell it's out of place.
>
> I have nothing against this posting except that it has nothing to do with
> this group. There are other places for it, especially when it is lengthy.

A valid inquiry, and one that deserves an answer. Now don't take this personally, but there are others who aren't as mature here. After having been flamed in the past for off topic material, I am not waiting to go on the defensive, I am taking the bull by the horns. It's not intended for you, but for some others who haven't spoken up yet, or those that did, and I didn't get their replys. (Our sysadmin decided to knock off a few hackers so they letter bombed our spool and we lost a couple of megs of mail, undoubtidly a few KB's were mine).

My weekly comentaries on Spectrum will deal with all aspects of communication. Because of the cross interest most Hams have, and the posability of not everyone who is interested having access to all the newsgroups, I will crosspost them here. If you have a good reader, you will only see it once. But if you check r.r.a.misc first, it will only seem like it's in the wrong place whenever the commentary has nothing to do with amateur radio.

I see no objections to my posting of Newsline each week? (Actually, I don't post it directly to avoid duplication, Mark automatically crossposts when I submit it to him for r.r.info). What if I tagged my comment on to Newsline? I bet there would be no complaints then.

I'm not allowed to add to, subtract from, or alter the Newsline text, and I made that rule. But if I did, and put a header or disclaimer that it wasn't part of Newsline, there would still be people who wouldn't realize it, simply because they don't read. The first line of each posting lists Bill, WA6ITF, as the publisher, so why did I get a letter today asking if I was the publisher? If the header says send your comments to Bill, then why do I get comments? Why did a Ham on another net who openly reprinted "digipeater rabbit", GIVING FULL CREDIT TO THE AUTHOR, get replys like, "this is the best thing you ever wrote"?

The point is that if you see something YOU don't think should be here, read it again. If you still don't get it, just remember there may be others that do. So show some maturity, skip it and read something else. This is a NOT your personal newsgroup, it is world wide and is read by to people who may find it interesting.

Ranting and raving and, (if it's one of mine), flaming me isn't going to make me stop, I already stated why and we're only talking about one message a week. If you think you can stop anyone that way, then you are nothing more than a censor. While we do need them to protect the morals of kids and morons, those that try to censor ideas are lowest form of scum on the earth.

As far as I'm concerned, the complaints have as much value as someone saying he only has Icom in his shack and doesn't want to see anyone post anything about Yeasu, Drake, Kenwood or whatever. They just make the complainer look immature, close minded and stupid.

SPECTRUM is heard on WWCR/5810 Khz at 0300 UTC-Sunday/10PM Eastern, Saturdays.

>
>Vince -- KA8CSH
>

Wow, they are up to lot #25 already? Did you try holding down the up and
down arrows simultaneously while turning it back on (this is not the reset
procedure). The other possibilty, although slim, was a reported rumor (I
think it was on Compu$erve) that some of these radios might be subject to
the new EPCA since they could receive cellular. Maybe Yaesu "fixed" the
FT-530. I really doubt it though and it is probably another circuit board
design change.

HH>This type of activity doesn't bother me, but I have heard the argument
HH>that "Yes, it is non profit, but it is conducting the 'business' of the
HH>organization" When I hear this argument, I think of the hamfest talk-in
HH>and parking usage of ham radio. It certainly is the 'business' of the
HH>organization that puts on the hamfest. What if National Public Radio
HH>(I think they're non-profit) wanted to use amateur radio to coordinate
HH>some activity?

Check that, Harv. I think your answer is a couple of issues back in
QST. Remember that as long as you are not directly making a profit you
can conduct business on the air. Hence the idea that you COULD order a
pizza on the air. But it makes it easier for folks to provide emergency
communications for races. If the church is non-profit, no problem.

NOTE: The Effective Sunspot Number for 02 MAY 94 was 25.0.
The Full Kp Indices for 02 MAY 94 are: 5+ 6o 5o 4o 4- 3o 4- 6-
The 3-Hr Ap Indices for 02 MAY 94 are: 54 79 45 28 22 15 22 67
Greater than 2 MeV Electron Fluence for 03 MAY is: 2.5E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. No flares were observed in
the last 24 hours.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field ranged from unsettled to major storm levels. The last 24 hours have been typical of the last two days: mostly minor storm levels at mid-latitudes with periods of major storm at high latitudes were observed from 02/2100Z through about 1200Z; conditions declined to unsettled levels with active periods at high latitudes for the remainder of the period.

STD: Electrons at greater than 2 MeV have again become enhanced. The enhancement began roughly near 14:00 UTC. Electrons approached or reached high levels at geosynchronous altitudes at about 20:00 UTC. Based on recurrence, this disturbance may last through to 16 or 17 May. Overall fluence levels were moderate.

Geophysical activity forecast: the geomagnetic field is expected to persist over the next three days in a similar pattern to today. Generally active conditions with periods of storming are likely during local nighttimes and unsettled to active conditions are expected during the daytime hours.

Event probabilities 04 may-06 may

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 04 may-06 may

A. Middle Latitudes
Active 40/30/25
Minor Storm 35/30/35
Major-Severe Storm 05/10/10

B. High Latitudes
Active 30/30/30
Minor Storm 45/35/35
Major-Severe Storm 10/10/10

HF propagation conditions continued below normal for high and polar latitude signal paths. Middle latitude paths experienced periodic below-normal propagation with slightly below-normal daytime propagation. MUFs from the polar to middle latitude paths have been depressed between 15 and 35 percent. Conditions are expected to continue below-normal throughout at least the next 72 hours.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ --------------------------
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,

and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

/\

POTENTIAL SATELLITE ANOMALY WARNING

ISSUED: 03:30 UT, 04 MAY

/\

ATTENTION:

Energetic electrons at greater than 2 MeV are becoming moderately
enhanced. The main enhancement began near 14:00 UTC on 03 May. Electrons
reached high levels near 20:00 UTC on 03 May. This activity has recurred for
several months now. If the last several solar rotations are any indication,
this activity might persist until approximately 16 or 17 May (perhaps not
quite this long on this rotation). During this interval, some geosynchronous
birds may experience electron charging related anomalies.

** End of Warning **

Worked last weekend on six:

New York, New Jersey, Ontario, Ottowa, Ohio, Michigan

Mostly on usb around 50.125. You just have to keep the radio on and
keep listening. Some of these were worked as late as midnight.

Six meter Spoadic-E is great fun!

This will be the second posting of this note. I do still need help!

I am seeking volunteers to provide radio support for a bicycle tour in the Aptos vicinity on the 15th of May. I will be arriving at the start of the ride at 6.30am, and will need other volunteers to be there by 6.45am. The ride is called Strawberry Fields Forever and benefits the Global Cyclists Exchange, whose aim is to promote peace among the various peoples on our planet through cycling.

Volunteers get a free lunch, a free ride t-shirt,and various goodies (chocolate dipped strawberries!).

I'm hoping for at least four volunteers, but more would make life easier. If you are interested, please contact me at this address (catz@Wattres.SJ.CA.US), or by phone at 408-255-9677. Thanks!

In <2psn0m$h5n@apakabar.cc.columbia.edu> mrw13@namaste.cc.columbia.edu (Marc Richard Wollemborg) writes:

>I finally decided on buying a Kenwood TH-78A and am now considering which
>batteries to get with it. There are actually a couple mail order places
>which will ship the radio with a battery besides the standard PB-13. This
>is how the three main Kenwood batteries compare:
> PB-13 Standard 7.2V 700A 2.5W on High Power (approx. 4.5 hrs.)
> PB-17 High-Power 12.0V 700A 5.0W on High Power (approx. 3.0 hrs.)
> PB-18 Long-Life 7.2V 1100A 2.5W on High Power (approx. 7.0 hrs.)

The 7.2V/700mA came with the radio when i got my TH-78E.
It's small and fits completely inside the rig. I mainly use it when i
carry the 78 around. Good for listening but don't talk too much.

The 12V/700mA doesn't make sense to me. It's too large and at 12V the
current goes up to more than 2A, which is too much for 700mA cells.
It's easy to kill a cell by reverse charge and the pack is sealed so you
can't replace individual cells. You get a bit more power out but if the
other side can't hear you at 2.5W it probably can't hear you at 5W. Get
a better antenna instead.

IMHO the 7.2V/1100mA is the best choice. I can chat all night long and
then it won't go down all in a sudden. The charge circuit inside the 78
will only supply about 60 mA of charge current so it takes some time to
recharge, but then you won't overload the little wall cube and won't
do any harm to the pack even if you leave it on for a week.

>There is also the BT-8 battery case which takes 6 AA batteries; what kind of
>output (in watts) does this provide for and how long will it last?

With 6 Duracell alkaline you get 6*1.5V -> 9V. Output power maybe abt
3.5W. I think those cell have a capacity off abt 1700mA. With 6 NiCd
cells you get 6*1.2V -> 7.2V. The sticker on the BT-8 says: don't use
NiCd. Of course i ignored that and got me 850mA cells. The only problem
was that the cells were not charged inside the rig. I was too lazy to
pull them out for charging and modified the BT-8 at bit.

>Additionaly, how about batteries that fit the Kenwood but are made by other
>manufacturers? I'm specifically looking for a "long-life, high-power"
>battery. Any suggestions/recommendations out there? Thanks very much.

Don't know any. Get a BT-8 and make your own pack. Then you can use
any type of cells you want and also can access individual cells. I plan
to get a set of those new NiMH cells that claim a capacity of 1200mA.

1524. digital speech transmission for HAMs?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-04 11:09:17 UTC
From: wsw@cellware.de
Message-ID: <wsw.1.000B27F8@cellware.de>
Source record: 267718

Hi OM out there!

last night I had a nice QSO with some OM about HAM and cellular phones.
We had the idea that one should try whether digital speech transmission
is possible in 2m, 70cm... too. But as far as i know, phone companies do
8 kilosamples per second with 8 bits (=64kBaud). I think it's too much
to transmit this way via narrowband FM. There must be some kind of data
reduction in commercial services.

Does anybody know, how they do it? And, is there a kind of chipset
available for own experiments? Or can commercial phones be modified for
HAM use?

Many questions in one file - but i rely on all you very kind Internet
users (:-))
If you know something that could help me: pse don't hesitate to email or
send it by packet - I'm very curious about this stuff.

Ten-Tec has been advertising their offering of kits for several months as a side note on part of their ads in the ham magazines. No specifics, though, in any of them. I haven't called them yet for their catalog but I guess I should.

Last time I checked into it (when we were planning to go to Bermuda last year), you have to have at least a General Class license to get a reciprocol license in most of the British countries and former colonies. I know it applies to Bermuda and the BVI, and I'm pretty sure it also applies to England. Check with the ARRL Reciprocol License folks for current info.

1527. Amateur Radio and Civil Rights

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-04 12:31:49 UTC
From: yee@mipg.upenn.edu
Message-ID: <YEE.94May4123149@mipgsun.mipg.upenn.edu>
Source record: 267706
Cross-posted to: rec.radio.amateur.misc,talk.politics.guns

Recently there was a post on rec.radio.amateur.misc about gun control which spawned a whole slew of posts supporting the concept. While my views on gun control are fairly well known in some newsgroups, this post isn't about this. It is about the threat to amateur radio. It is very easy to take gun control arguments and apply them equally well to ham radio. In fact, some of the attacks I mention below have already been tried. Some of these attacks are blatently false but are seen in the media nonetheless. Remember, gun control arguments are also based upon twisting the facts.

1) Nobody _needs_ amateur radio so we should feel free to ban it. In an emergency the government can take care of all emergency communication. Individuals should not be trusted with dangerous radio equipment which can electrocute children.

2) With the advent of cellular phones, amateur radio is outdated; it no longer needs the spectrum it requires. Amateur radio should be phased out and the spectrum sold to companies. The revenue gained from selling this spectrum can be used to bolster FEMA and other government based emergency services.

3) The only purpose for ham radio is by criminals who scan the airwaves to keep track of police broadcasts.

4) Amateur radio emits radio waves which have been shown to cause cancer so we should prohibit amateur radio as a public safety concern.

5) Amateur radio antennas are liable to fall and injure someone.

6) Use CCR's to limit antennas. They are ugly and ruin the view for all neighbors. CCR's are private contracts so are not subject to the limitations that laws are.

Contests.
The A.N.A.R.T.S. RTTY contest starts 0000 Saturday June 11 and ends
2400 Sunday June 12. (second full week-end in June every year).
Not more than 30 hrs. operating time for single operator stations.
Rest periods may be taken at any time during the contest.
Summary of operating times must be submitted with each contest log.
Multi-operator stations may operate the entire contest period.

Bands:
Use amateur bands 80, 40, 20, 15 and 10 metres.

Modes:
All digital modes permitted (RTTY, Amtor, FEC, PKT, Pactor).
Note: No satellite operation permitted.

Classifications:
(A) Single operator (one transmitter).
(B) Multi-operator (one transmitter).
(C) Short Wave Listener.

Exchange message:
To consist of - RST - Time (UTC.) - CQ zone.

Scoring:
For each band used - as per exchange points table to obtain QSO
points. Count countries worked (see definition).
Total all bands used to obtain (1) total QSO points.
(2) total countries.
World stations calculate *VK Bonus* which is 100 points for each VK worked on
14 MHz.: 200 points for each VK worked on 21 MHz.: 300 points for each VK

worked on 28 MHz.: 400 points for each VK worked on 7 MHz.: and 500 points for each VK worked on 3.5 MHz.
Claimed score for world stations is calculated by multiplying:
(1) Total QSO points by (2) Total countries. Then that total by
(3) The number of continents worked during the contest.
(Note that each continent counts once only to a maximum of 6).
To the total obtained add the *VK Bonus* to show grand total claimed score. In all cases a station may only be worked once per band but may be worked on other bands for QSO points and multipliers.

Countries:
The country count is as per ARRL DXCC list of countries except that Australia (areas 1-8), Canada, Japan and U.S.A. mainland do not count as separate countries. However, each call area VK1-VK8, and each call area in Canada, Japan and mainland U.S.A. do count as separate countries.
Contact with ones own country does count for QSO points but does not count as a multiplier. (Note that call areas VK1-8 and in Canada. Japan and USA mainland count as countries).

Logs:
Must show in this order 1. date. 2. time (UTC.). 3. callsign of station worked/heard. 4. message information sent/received (RST/Time/Zone). 5. points claimed.
A summary sheet must show: Callsign of station. name and address of operator, bands used (a separate log is required for each band), the points claimed for each band, the number of countries worked on each band, the number of continents worked and details of *VK bonus* calculations for world stations. A summary of the calculations made to obtain the grand total claimed score as per the scoring instructions will assist checking. The general certification regarding compliance with rules and signature of operator is also required.
Multi-op logs must contain signatures and callsigns of each operator. Logs must be received by the contest manager,
A.N.A.R.T.S. P. O. Box 93, Toongabbie, NSW 2146, Australia,
by September 1st of the year of the contest.
(A copy of the scoring table is available from the editor, if sase is enclosed please).

News of the Polish SP-RVG RTTY contest reached me too late to be included in the April news. This is reported to be a new biannual event which happened on 23/24 April. A rush bulletin was circulated around the Packet network by Andy G3ZYP BARTG publicity officer providing as much advance warning as possible.

Notes of interest.
Starting on June 9 there will be RTTY for 7 days from the Federated States of Micronesia (V6) by Ken V73C and several others concentrating on CW and RTTY all bands.
QSL via OKDXA, P.O. Box 88, Wellston, OK 74881, USA.
Saint Paul Isl. (CY9) between June 10 and 19 there will be a 4 or 5 day DXpedition, weather permitting, with RTTY activity planned for 7.085 and 14.085 MHz. QSL via K0XN.
A43DI/0 was on Daymaniat Isl. IOTA AS-112.

VD2STN was working from Jesus Isl. a PQ-14 contest site.
XU7VK was a good signal from Phnom Penh, Kampuchea.
Peter (ex XT2BW) is now reported working SSB phone as 9G1PW.
He regularly used RTTY from XT so good prospects from 9G.

Thanks this month to:
G3ZYP (BARTG publicity officer), VK2SG, ARRL (ARLD).

BARTG caters for all DATA interests with information-components-kits -ready built units and software from experts. Members receive a 120 page quarterly journal devoted to data modes. Beginners guides for most data modes are available. The group sponsors HF and VHF RTTY contests, administers its own DX and members award scheme and runs an annual rally.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the broadcast may also be mailed to this address, as well as any queries regarding membership or services offered by BARTG.

Copy of the news as distributed by G0ARF 940426.

[more deleted]

Well, I don't think anyone has the right to keep and arm bears. Those
critters are fairly dangerous as they are, especially when protecting
their young or when they are hungry. :-) :-)

Sorry es 73,
Benjy

I was over at Vince's house last night and he DID get it to work.

He had to also unsolder pad #15. Which on MY ft-530 would have enabled
the out-of-band TX feature (which I DON'T want).

Oddly, Vince's rig does NOT TX out-of-band with pad #15 unsoldered!

1535. PROPAGATION - by AD5Q

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-04 14:49:11 UTC
From: marcbg@netcom.com
Message-ID: <marcbgCpA95z.M6y@netcom.com>
Source record: 267697
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,sbay.hams

PROPAGATION - by AD5Q FROM THE MAY 1994 NARS NEWS

April was disappointing. For the first half of the month we had a recurrence of the disturbed conditions from March. The bands opened up later in the month as these disturbances moved to the other side of the sun. The first half of May will likely bring yet another two weeks of poor conditions. Aside from this, late spring is an excellent season for DXing - especially on 20. There is still another problem.

During the 2 weeks of quiet conditions in late April, fluxes were mostly down in the 70's. We should still expect periods where they are higher, and hope that they range from the 70's to the 90's. The most effected band in this range is 15 meters. When in the low end of the range (as in late April), we get a taste of what 15 will sound like for the next few years. The band was mostly dead. Openings were marginal, with only a few european signals coming through. Without higher fluxes in May, there will be little DX on this band until the fall. East/west paths will be OK, so the band should be watched for openings to Africa and the Pacific. The same can be said of 10 meters.

20 has opened up nicely, but still closes down completely after midnight. With flux levels in the 70's, the high latitude night path to Europe will not open (but check 30 meters). After dark, a pipeline opens over the pole to Siberia, Turkistan (UI, UL, UM, UH, UJ), parts of Russia, and points further south. As we progress toward summer, these openings should expand westward to the more heavily populated portions of Russia and Ukraine - but not Europe. The best european openings seem to be in late afternoon and in the morning. Morning is also a good time for the polar paths, and this opening includes paths to eastern Asia. Signals from the S.E. quarter of Asia come through until noon. Careful tuning of 20 meters in the morning can pay off nicely when the fluxes are too low to open Europe on 15. Contacts with 9V, BY, JT, 9M, V8, HS, S2, & BV can be made routinely nowadays, with rarer DX always a possibility. Long path is usually open for a couple hours after sunrise - mostly to the Indian Ocean and southern Africa.

17 meters is another alternative for day path contacts into Europe, and recently has had more DX activity than 15. May should be an excellent month for this band. 40 also remains in good shape, with many nice long path and Asian contacts being made

(mostly from the west coast). As I write this (May 3), the A index is back up to 30, and so that mess on the other side of the sun is returning for another go-around. This forecast is not valid until things clear up again.

Most amateur radio events, fortunately, are not spectator sports, and
operating a ham radio station while nude is no different from doing it
while clothed, other than the increased level of comfort on the part
of the operator.

>As for nude hiking, we have too many biting flies up here.... Besides, I
>might trip over myself!

If you have Avon products available to you in Alberta, you might try to
obtain their product called "Skin-so-Soft", a skin moisturizer which
just happens to make a dandy bug repellent... but to many folks,
it has a less objectionable odor than other repellents.

I have seen a number of comments about needing to findout what the actual problem was before storming the Bastile. Well, I found the following during my wanderings about the net.

73

Ted

!@!@!@

"Poor judgment leading to these inappropriate communications has served to reduce the credibility of the organization with members and volunteers.

"The most recent situation, as documented in the attached, regards the repeated inappropriate dissemination of internal policy through electronic communications, and inappropriate communications with field volunteers.** The organization will not tolerate any further instances of this behavior.

"The addendum Mr. Hurder appended to an e-mail message presented publicly, in an inappropriate manner, an internal business policy, despite Mr. Hurder's opportunity to discuss the policy as a member of the management team at a manager's meeting a week earlier. The policy was communicated succinctly to Mr. Hurder at that time,*** and was followed up in a written memorandum to all staff a week later.

"To help the organization rectify the instant situation, Mr. Hurder must:

"1. Issue an apology (approved by the undersigned in advance of release) to the subject correspondents and any other correspondent who received the addendum. Additionally, an apology (approved by the undersigned in advance of release) must be issued to the affected Director(s).

"2. Refrain from commenting externally on this, or any, internal business policy.

"3. Refrain from issuing inappropriate and potentially destructive communications externally again.

"4. Conduct his correspondence so that it will not come to the point where the organization is forced to review every piece of outgoing mail to ensure its integrity. If this happens, then it will be deemed that he is unsuitable for the position of Deputy Manager.

"5. Failure to comply with all of the above will result in immediate termination of employment."

(Signed) Richard Palm. Dated 4/13/94
Luck Hurder would not sign.

-0-

* In a telephone interview, Luck said the attached documents "were about 10 pages of gripes from directors about my `bad attitude'" as it related to board actions.

** The "inappropriate content" referred to explaining to members that copies of all communications had to be sent to the appropriate ARRL director. "On email, I tacked on a disclaimer saying please be aware that a copy of this is going

to your elected ARRL Director, and quoted a staff edict saying failing to do this would result in a poor annual review.

"Most email messages I handled every day had no indication of where the message came from, hence no clue to which was the `appropriate director.' I asked Rick how to tell which one. And he said `that's already been discussed,' but wouldn't tell me the outcome of the discussion."

NOTE: AMATEURS MAY FEEL FREE TO POST THIS MESSAGE ON PACKET BBSs AND OTHER EMAIL SERVICES PROVIDED THE WHOLE MESSAGE IS POSTED -- NOT JUST PARTS OF IT. - W4MLE BY PERMISSION OF KY1T.

Morse Football

Did you know that fans at football matches are Morse
experts? Well I didn't either until Mike Stott G0NEE
told me. Apparently, if you listen to the shouts and
the clapping, one of the clapping sequences is:

CLAP CLAP clap clap clap clap clap clap CLAP CLAP
_ _ . . . . . _ _

This, as you can see represents 73 in Morse. After some
investigation Mike has come up with the facts. It all
started just after the start of the Second World War and
the earliest date of its use that he can find was in the
winter of 1940.

This was used by the fans as a way of sending "Best Wishes"
to their football team. Morse code was used because at
that time a large number of the general public could read
and send Morse code - not only from its use in being a
member of the armed forces but also in every day from the
youth organisations at the time! So now you know.

I have heard the same data before.

Regarding the bugcatchers, there are a few varieties it seems.

Any differences between the style with the capacitance hat
and the style without? Also, the dude from Texas Antennas (?)
at Dayton pointed out that their model with the little coil
at the bottom (besides the monster coil in the middle), allowed
a much larger 2:1 swr range on 80 (and 40?). Any experiences?

Chuck, there is not even a *definition* of "assault weapon." You sound like one of the millions of sheep who believe the TV media and the lying president and secretary of the treasury when they tell you the firearms they're trying to ban are used disproportionately in crime, are "the choice of gang members, drug dealers and terrorists," are "rapid-fire," are "high-powered," and fire more than one bullet with a pull of the trigger.

It's really sad how ignorant people like you are. It's even sadder that you people seem to agree with Bill Clinton's position that the second amendment to the Constitution is about hunting.

1545. Icom W2A with optional Accessories for sale $400

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-04 16:18:16 UTC
From: crisp@netcom.com
Message-ID: <crispCpADAG.K9x@netcom.com>
Source record: 267707
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc

I have an Icom W2A in nice condition I'd like to sell. It has the BP84
battery pack which comes with it standard and also has the origninal
box, manual and sales receipt. I also have a number of optional
accessories that go with it for the $400 price.

They are:

BP85 12V battery pack
BC72 Desktop fast charger (really the only way to go!)
HM65 Lapel Speaker Mike

The BC72 charger also in in the original box.

I bought it all new in 1991 and quickly lost interest in
repeater talking so it hasn't been used much since early 92.

I am asking $400 for it with the buyer paying shipping.

The W2A is a twin band ultra small HT covering the 2Meter and 440MHz
ham bands. It has CTCSS and PL and DTMF capability included stock. Truly
a deluxe HT.

It also makes a fine wideband scanner and is capable of receiving cellular
and even has a 30khz step size etc. If anyone is interested in more info,
I can email a few files describing features such as cross band repeat,
how to do the extended transmit mod (I have not done this), and a
few other tidbits that were posted in the 1991, 1992 timeframe.

I am a new ham and just a few days from buying my first HT, probably the YAESU FT-530. I've been monitoring 2m repeaters on my scanner lately to try to learn the ropes. I am a little concerned that the 5 watt output running an HT with a mag-mount antenna may not be very good coverage. In the New Ham Companion a friend brought back from Dayton, there is a brief mention of the possibility of using some sort of amplifier in this configuration, but they offer no specifics, brands, prices, etc. about doing it. I would appreciate hearing from anyone who has experience or opinions. Thanks,

Jim Deeming

I was over at Vince's house last night and he DID get it to work.

He had to also unsolder pad #15. Which on MY ft-530 would have enabled
the out-of-band TX feature (which I DON'T want).

Oddly, Vince's rig does NOT TX out-of-band with pad #15 unsoldered!

73 wb8zjl =paul=

This is correct. Desoldering pad #15 will disable out of band tx.
Resoldering it will permit out of band tx.

[future arguments against amateur radio deleted]

Yes, you have made some good points on possible future attacks on
amateur radio. Note that amateur radio is more like social security
than like gun rights. It is a socialistic allocation of confiscated
property. Its justification is for people to fiddle around with new
technology at the government's expense and provide an alternative emergency
communications network. Just like a park which can be used by FEMA to put
up tents or play in, Amateur radio uses the radio waves. It has one-up on
FEMA because it is private individuals who are responsible for maintaining
their equipment which they can volunteer or allow to be coopted in the event
of an emergency.

Repeatedly, Amateur Radio has proven itself to be an effective means to
provide volunteer help in emergencies. Even if the radio waves were one
day to be regarded as property and not allocated loot as they are today,
there would be a role for reserving a portions of the electromagnetic
spectrum for this purpose for the same reason that the government needs
military bases to defend its citizens.

As for the FCC rules on Amateur radio, because it is more like social security
where you sign agreements putting yourself under the auspices of the
Federal government, it is most emphatically unlike gun issues in the current
political climate. When you sign your license application and pass your
test, you are promising to obey the laws as applicable to amateur radio.
You are submitting yourself to a series of regulations that prescribe and
proscribe your behavior which include some potentially Draconian penalties.
One difference from social security though is that you're not tricked into
joining it out of ignorance. Amateur radio licensees got into the service
with both eyes open, putting it head and shoulders above most government
activities that restrict human life.

I may be going to the Rochester, NH hamfest this weekend.
However, I just took another look at the New England hamfest list, and
I see the note that says:

$20@9AM $5@3PM

Anyone know if this means entry fee to get in and buy, or a seller's
fee? If it's going to cost me $20 just to get in and look around (plus
$10 in gas to get there and back), I'm not going. I can't afford to
buy much of anything anyway...

1560. FT-11/41R PL Tone Problem: Followup

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-04 19:49:29 UTC
From: kennish@kabuki.EECS.Berkeley.EDU
Message-ID: <2q8u89$8ak@agate.berkeley.edu>
Source record: 267717
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Disclaimer: The following is for informational purposes only.
Use at your own risk, and any liability from using this information
is yours.

History: Those that saw my earlier post are aware that the Yaesu
FT11/41R radios have a problem with the PL tone generation. If
used without the optional FTS-26 tone board, the PL tones are
slightly off in frequency, being too high.

Solution: Yaesu has recognized this as a problem, as has issued
a service bulletin TB9420 to deal with this problem. The fix
involves changing the value of one of the loading capacitors used
with the microprocessor crystal. The principle being that lowering
the clock frequency will lower the PL tone.

Yaesu's bulletin directs changing C2018 (33 pF chip cap loading
the output of the inverter on the CPU) to 39 pF.

Warning: Those of you contemplating this should be made aware that
the chip cap less than 1/2 the size of the COG size chip caps -- I
would not attempt this without a microscope and a FINE tip.

Changing the capacitance to 39 pF did indeed lower the PL tone,
but was insufficient to fix the problem. Only after adding another
7pF (total 46 pF) did the PL done fall within range of a local
repeater.

It may be that this particular situation was bad luck (i.e. high
crystal, low caps, low reed on the repeater).

Yaesu has started using the larger capacitor beginning with
lot 13 (11R) and lot 12 (41R).

If you have a problem with PL tones, and opt to return your unit,
you may want to insist that they check the value of the PL after
the mod -- they may have to put an even larger capacitor in there
(e.g. 47 pF)

I am happy to report, however, that the above mod has fixed
the PL problem for me, and the local repeater now likes the 41R.
Other than this minor (albeit frustrating) glitch, the 41R
is a neat unit. VERY small -- less than 1/2 the size of the 530,
and performs well for its size. The standard 4.8 V pack is
compact, but keeps the power output to 800 mW on high and 200 mW

on low, which may be a problem for those hard of hearing repeaters.
Speaker audio is improved over the 530. Your mileage may vary.

Related Item:

The extended RX/TX mod for the 41R is identical to that for the 11R.

Congratulations. What is your call sign?

I own the FT-530 also and think it is a nice radio. Now I'm thinking of
buying a mobile rig. The first radio I owned was a Realistic HTX-202.
I should have bought a mobile rig as the next radio. You should consider
a mobile instead of the HT. It gets pretty old taking the radio in and
out of the car every day.

My suggestion would be to not buy the amplifier and save the money for
a mobile rig.

I have two friends in radio district nine waiting for their licenses. I know the FCC is reporting 10-12 weeks from receipt, so please don't send me mail telling me that ;)

For those of who you have received new licenses in the past week, or upgrades for that matter, please mail me with date information -- when you took your test, effective date of your license, and when you received it.

Also, if you received a new class C callsign (1x3) in district 9, please pass your callsign along.

Thanks much!

>

Here are the 1994 Field Day rules (thanks, Billy!).

Field Day Rules

1) Eligibility: Field Day is opened competitively to all amateurs in the ARRL/Canadian Field Organization (plus Yukon and NWT). Foreign stations may be contacted for credit, but are not eligible to compete.
2) Object: To work as many stations as possible on any or all amateur bands (except 10, 18 AND 24-MHz bands) and, in doing so, to learn to operate in abnormal situations under less-than-optimum conditions. A premium is placed on skills and equipment developed to meet the challenge of emergency preparedness and to acquaint the public with the capabilities of Amateur Radio.
3) Dates: June 25-26, 1994.
4) Field Day Period: From 1800 UTC Saturday until 2100 UTC Sunday. Class A and Class B (see below) stations who do not begin setting up until 1800 UTC Saturday may operate the entire Field Day period of 27 hours. Others must begin their setup no earlier that 1800 UTC Friday, and may operate no more than 24 consecutive hours; ie, once on-the-air Field Day operation has started, it must end 24 hours from that point.
5) Entry Categories: Field Day entries are classified according to the maximum number of simultaneous transmitted signals, followed by the designation of the nature of the individual or group participation. Below 30 MHz, once a transmitter is used for a contact on a band, it must remain on that band for at least 15 minutes. During this 15-minute period, the transmitter is considered to be transmitting a signal, whether it is or not, for purpose of determining transmitter class. Switching devices prohibited.
(Class A) Club/nonclub portable: Club groups (or nonclub groups with three or more licensed amateurs) set up specifically for Field Day. Such stations must be located in places that are not regular station locations, and must use no

facilities installed for permanent station use, nor any structures installed permanently for Field Day use. Stations must be operated under one call sign (except when the Novice/Technician position is used) and under the control of a single licensee or trustee for each entry. All equipment (including antennas) must lie within a circle whose diameter does not exceed 300 meters (1000 feet). All contacts must be made with transmitter(s) and receiver(s) operating independent of commercial mains. Entrants who, for one reason of another, operate a transmitter or receiver from commercial mains for one or more contacts will be listed separately at the end of their class.

Any Class A group whose entry classification is two or more transmitters (non-Novice) may also use one Novice/Technician operating position (Novice bands only) without changing its basic entry classification. For Field Day purposes only, any Canadian "Amateur" licensee, who has been licensed for less than six months prior to Field Day, shall be considered a "Novice" to provide a means for Canadian Field Day Class A stations with two or more transmitters to participate with a "Novice/Technician" operating position. This "Canadian Novice station" is restricted to the US Novice sub-bands and power/mode restrictions. The Novice/Technician station (including antennas) should be set up and operated by Novice and Technician licensees and should use the call sign of one of the Novice/Technician operators.

(Class A--Battery) Club/nonclub portable: Club groups (or non club groups with three or more licensed amateurs) set up specifically for Field Day and all contacts are made using an output power of 5 W or less and the power source is other than commercial mains or motor-driven generator (eg, batteries, solar cells, water-driven generators). Other provisions are the same as for class A.

(Class B) One- or two-person portable: Nonclub stations set up and operated by not more than two licensed amateurs will be placed in Class B. Other provisions are the same as for Class A. One- and two-person Class B entries will be listed separately in the results.

(Class B--Battery) One- or two-person portable: Nonclub stations set up and operated by not more than two licensed amateurs and all contacts are made using an output power of 5 W or less and the power source is other than commercial mains or motor-driven generator (eg, batteries, solar cells, water-driven generators). Other provisions are the same as for Class A. One- and two-person Class B--Battery entries will be listed separately in the results.

(Class C) Mobile: Stations in vehicles capable of operating while in motion and normally operated in this manner, including antenna. This includes maritime and aeronautical mobiles.

(Class D) Home stations: Stations operating from

permanent or licensed station locations using commercial power. Class D stations may count contacts only with Class A, B, C and E Field Day groups for points.
(Class E) Home stations--emergency power: Same as Class D, but using emergency power for transmitters and receivers. Work stations in Class A, B, C, D and E.
6) Exchange: Stations in any ARRL/Canadian Section will exchange their Field Day operating class and ARRL/Canadian Section (see page 8 in any QST). For example, if your club group was planning to operate in the three-transmitter, Class A category from Missouri, you would send "3 A Missouri". Foreign stations send RS(T) and QTH.
7) Miscellaneous Rules:
A) Operators participating in Field Day may not, from any other station, contact for point credit the Field Day portable station of a group with which they participated.
B) A station used to contact one or more Field Day stations may not subsequently be used under any other call during the Field Day period. Family stations are exempted.
C) Each phone and each CW segment is considered as a separate band. All voice communication contacts are equivalent, and Packet/RTTY/ASCII/AMTOR is counted as CW. A station may be worked once on each band. Crossband contacts are not allowed. The use of more than one transmitter at the same time on a single band is prohibited, except that a Novice/Technician position may operate on any Novice band segment at any time. No repeater contacts.
8) Scoring: Scores are based on the number of valid contact points times the multiplier corresponding to the highest power used at any time during the Field Day period, plus bonus points. Phone contacts count one point each, and CW contacts count two points each. Power multipliers: If all contacts are made using an output power of 5 W or less and if a power source other than commercial mains or motor-driven generator is used (eg, batteries, solar cells, water-driven generators), multiply by 5. If any or all contacts are made using an output power of 150 W or less, multiply by 2. Multiply by 1 if any or all contacts are made using an output power more than 150 watts. Batteries may be charged while in use for Class C entries only. For other classes, batteries charged during the Field Day period must be charged from a power source independent of the commercial mains.
A) Bonus points: The following bonus points will be added to the score (after the multiplier is applied) to determine the final score. Only Class A and B stations are eligible for bonuses. Just check the box on the Field Day summary sheet to indicate that you qualify for the bonus, and attach the necessary proof.
1) 100% emergency power: 100 points per transmitter for 100% emergency power. All equipment and facilities at the Field Day site must be operated from a source

independent of the commercial mains. Example: A club operating 3A, using 100% emergency power may claim 300 bonus points.
2) Public relations:
A) 100 points for media publicity. Publicity must be obtained or a bona fide attempt to obtain publicity must be made. Evidence must be submitted in the form of a newspaper clipping, a memo from a BC/TV station stating that publicity was given or a copy of the material that was sent to the news media for publicity purposes.
B) 100 points for physically locating in a public place (eg shopping center, parks, etc) with significant access by the public. The intent here is for Amateur Radio to be on display to the public.
C) An additional 100 points can be earned by such display stations in public places actively conducting an information booth for the visiting public, and dispensing information handouts, maintaining visitor's log, etc, as an information/recruiting tool for Amateur Radio. Evidence submitted for both (B) and (C) may consist of copies of handouts, visitor's log, brief report on activities conducted, photos, etc.
3) Message origination: 100 points for origination of a message by the club president or other Field Day leader, addressed to the SM or SEC, stating the club name (or nonclub group), number of operators, field location and number of ARES members participating. The message must be transmitted during the Field Day period, and a fully serviced copy of it must be in standard ARRL message form or no credit will be given.
4) Message relay: 10 points for each message received and relayed during the Field Day period, up to a maximum of 100 points. Copies of each message, properly serviced, must be included with the Field Day report.
5) Satellite QSO: 100 points can be earned by completing at least one QSO via satellite during the Field Day period. The repeater provision of Rule 7C is waived for satellite QSOs. A satellite station (one) does not count as an additional transmitter. On the summary sheet, show satellite QSOs as a separate "band".
6) Natural Power: Field Day groups making a minimum of five QSOs without using power from commercial mains or petroleum derivatives can earn 100 points. Intuitively, this means an "alternate" energy source of power such as solar, wind, methane or grain alcohol. This includes batteries charged by natural means (not dry cells). The natural-power station counts as an additional transmitter. If you do not wish to change your entry class, take one of your other transmitters off the air while making the natural-power QSOs. A separate list of natural-power QSOs should be enclosed with your entry.
7) W1AW message: A bonus of 100 points will be earned by copying a special ARRL Field Day bulletin sent over W1AW on its regularly announced frequencies just before and

during Field Day. This message can be received directly from W1AW or by any relay method. An accurate copy of the received message should be included in your Field Day report.
8) Packet Radio: 100 points can be earned by completing at least one QSO on packet radio during the Field Day period. The repeater provision of Rule 7C is waived for packet radio QSOs. A packet station (one) does not count as an additional transmitter. On the summary sheet, show packet radio QSOs as a separate "band".
9) VHF/UHF: 100 points can be earned by completing at least ten QSOs (excluding packet contacts) on any band or combination of bands above 50 MHz (VHF/UHF bands) during the Field Day period. A VHF/UHF station (one) does not count as an additional transmitter. This station is not limited to making just ten QSOs. It may be operated for the entire Field Day period, and all contacts (excluding packet contacts) count for QSO points credit, including the first ten.
9) Reporting: Entries must be postmarked by July 27, 1994. No late entries can be accepted. A complete entry consists of an official ARRL summary sheet (or reasonable facsimile) and a list of stations worked on each band/mode during Field Day, plus bonus proof. The list of stations worked on each band or mode may take the form of official ARRL dupe sheets or an alphanumeric listing of call signs worked per band and mode. This list may be computer-generated. Incomplete or illegible entries will be classified as checklogs. A copy of Field Day logs should be kept by your Field Day group, but should not be sent in unless specifically requested later by ARRL.
10) Condition of Entry: Each entrant agrees to be bound by the provisions, as well as the intent, of this announcement, the regulations of his or her licensing authority and the decisions of the ARRL Awards Committee.
11) Disqualifications: See January 1994 QST, page 124.

Send for Your Field Day Package

Send to HQ a 9 X 12-inch self-addressed envelope with 4 units of First Class US postage or 4 IRCs for the official Field Day Entry Package. This package includes 1 Publicity Kit, 1 Field Day Summary Sheet, 1 large dupe sheet with instructions and a check list to ensure that your entry is complete. If you require more dupe sheets, indicate so in your request and affix 1 unit of additional First Class postage to your SASE for each two additional dupe sheets requested.

W1AW Field Day Bulletin Schedule

In addition to the regular schedule detailed on page 00 of April QST, extra CW bulletins will be run at 1400 UTC (10 AM EDT), and extra phone bulletins at 1500 UTC (11 AM EDT) both Saturday and Sunday mornings.

In article <1994May4.150118.14020@mnemosyne.cs.du.edu>, tkell@nyx10.cs.du.edu (ted kell) writes:

|>"The most recent situation, as documented in the attached,
|>regards the repeated inappropriate dissemination of internal
|>policy through electronic communications, and inappropriate
|>communications with field volunteers.** The organization will
|>not tolerate any further instances of this behavior.

Sounds like "The Emperor's New Clothers" only instead of the organization finding out they're naked, they simply lopped off anyone that stuck up their head. This is an organization of and for the members? Maybe Luck wasn't a member of the ARRL.

I'll have to agree with comments made by others. Luck was one of the few folks you could count on. Some of the rest of the staff or upper echelon I can take or leave.

|>** The "inappropriate content" referred to explaining to
|>members that copies of all communications had to be sent to
|>the appropriate ARRL director. "On email, I tacked on a
|>disclaimer saying please be aware that a copy of this is going
|>to your elected ARRL Director, and quoted a staff edict saying
|>failing to do this would result in a poor annual review.

Sounds terribly damaging to me. Perhaps he was a spy for W5YI or Wayne Green and this was his way of deseminating top secret ARRL documents coded as disclaimers.

The whole thing is a sad commentary on the pettiness of the organization.

73,
Todd
N9MWB

PS I think they should cut off the ARRL email access. That would help cut down on inappropriate communication with field volunteers. After all, you wouldn't want to let them out of the dark.

They simply have the bandwidth and we don't. They have eight wires coming in, digitize the voices into eight time slots at 64kb, send the 64kb out over a broad band wireless (microwave), demod into eight voices at the other end, and send them out over eight wires.

We don't have wires coming in, we have channels, more akin to cellular. We could do analog or digital cellular but not with our present HTs.

Mr. Hurder is certainly making claims which are rather damaging to ARRL and I'm sure that the ARRL knows what these claims are and are free to respond to correct errors in fact that Mr. Hurder is making. I realize that the ARRL has reasons for not responding (i.e. making damaging statement in the fact of a possible legal action) but I also realize that the ARRL is supposed to be a membership organization that is "of, by and for the radio amateur" so is supposed to be anwerable to me personally.

My support of an organization depends upon if I personally consider that the benefits of my support outweighs the cost. The cost is my $30 a year. The benefit is QST and the ability for the ARRL to be a worthy advocate for amateur radio. Personally, I don't consider QST worth $30/year so it boils down to whether I believe that the ARRL benefits me as an advocate for amateur radio. My membership lapses at the end of this calendar year and I will have to decide whether the ARRL is worthy of my money. Is the ARRL worth $30/year?

Incidentally, I don't generally advocate loud boisterous boycotts of organizations I don't like. I simply vote with my feet and take my business elsewhere. I have done so with a restaurant or two and TIME magazine.

yee@mipg.upenn.edu (Conway Yee) writes:

[Intro deleted]

>1) Nobody _needs_ amateur radio so we should feel free to ban it.

>2) With the advent of cellular phones, amateur radio is outdated.

>3) The only purpose for ham radio is by criminals who scan the
> airwaves to keep track of police broadcasts.

>4) Amateur radio emits radio waves which have been shown to cause
> cancer so we should prohibit amateur radio as a public safety
> concern.

>5) Amateur radio antennas are liable to fall and injure someone.

>6) Use CCR's to limit antennas. They are ugly and ruin the view for
> all neighbors.

7) I don't use amateur radio, I don't like amateur radio, therfore you
shouldn't be allowed to use amateur radio.

8) Amateur radio is not centralized, and we know that all things benefit
from (mandatory) centralization

9) Amateur radio might be used to spread news the State might like to
keep quiet, or to coordinate active opposition to the State.

10) People who use amateur radio won't support the government when it
wants to build big, centralized communications nets to fill the same
niche. People who depend on gov't comm nets, on the other hand, will
never complain about the budget or power of FEMA, the FCC, etc.

You'll never see anyone admit to these motives openly, but they will exist
soon if they don't already. Prohibition movements have the same form
whether one is trying to ban alcohol, or guns, or amateur radios.

I give amateur radio another 15-20 years if current trends continue. The
same for private aircraft. Private automobiles will probably last 30-40
years, but no longer. The future will not be pretty, unless we change
course soon.

It disheartens me to hear that the consensus among amateur radio types is
that gun control is a good thing. It may come to the point where we need
them to coordinate our opposition to the State, and they need us to guard
their stations.

"We must all hang together, or we will assuredly hang seperately"

I am against the ban too but what the hell does this have to do with
amateur radio. Post this in alt.politics. somthing or other.

Yep, I thought that I made that point. Personally, I'd prefer that the test pools not be published since it makes them too easy but I guess there must be a shortage or something of potential operators of late. Does anyone in the know have any facts here?

>their stations.

Amateur radio is a highly regulated communications medium, unlike internet.
Radio operators are getting a favor from the federal government that is in
their personal interest to maintain. The feds frequently treat them well
too because they need amateur radio operators, even today. The typical
individual who sticks with the licensing requirements of amateur radio,
especially the advanced licenses, tends to be quite loyal to the central
government operating out of Rome, er Washington. It makes a big difference
when there someone is getting a major favor from the government when it
comes to judging other activites thereof.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 4/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 4 MAY AND FORECAST UP TO 7 MAY

IPS Warning 12 was issued on 25 APR and is still current.

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/013

1B. SOLAR FORECAST
05 May 06 May 07 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/016

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 3 May
Learmonth 16 3333 4333
Fredericksburg 18 29
Planetary 20 45

Observed Kp for 3 May: 6765 4333

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
05 May 25 Unsettled to active.
06 May 25 Unsettled to active.
07 May 20 Unsettled to active.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
04 May normal-fair fair poor
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 May fair poor poor
06 May fair poor poor
07 May normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near normal, with a 30% depression and spread F
10-14UT.

Observed T index for 04 May: 19

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
05 May 15 Near normal to 15% depressed.
06 May 20 Near predicted monthly values.
07 May 20 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

Source record: 267490

John Boudreau (ve8ev@gov.nt.ca) wrote:
:
: doesn't have enough kick to get through. I picked up a 70cm amp kit
: from Communications Concepts. Less than $200, you just add connectors and
: a heat sink and away you go. It is rated for 18W in 100W out at 28VDC but
: I drive it with the 10 watts from the 767 and use the 767's internal 24VDC
: power and get about 60 watts output. Even into a ground plane or discone
: antenna that works OK for AO-21. You just have to wait until the BIG GUNS
: take a breath and slip your call in. If you add a high gain antenna
: (I'm using a 10 turn helix) you can work AO-21 anytime its above the
: horizon.

Yeah, Amps for both 2m and 70cm are awaiting budget approval... Thanks for
the suggestion re using the 767's power supply. That will help.

: If you're in a hurry to make some FM satellite contacts, try AO-27
: (145.85up/436.800down +/- 13kHz doppler). Ten watts to a ground plane
: is plenty for this one, although it is only scheduled on weekends and
: then only when the solar panels are illuminated by the sun.
:

Well, that's what I thought too, but so far, no luck. On the 2m side I have
a borrowed 30 watt amp, and a 5 element beam (vertically polarized). Looks
like I should keep trying. I have heard the downlink, but it has been very
intermittant, even on weekends.

: *NOTE TO ALL AO-27 USERS*
:
: If you don't hear your own downlink right away, tune between 436.875 and
: 436.915 and *LISTEN* for activity. Also, you might require a filter on

Uh, did you mean 436.785 - 436.815, or is there another downlink freq?

: your receiver to cancel to 3rd harmonic from the 2m uplink.

Oooh, good point. I've mounted my antennae 90 degrees from each other
(polarization, not direction :-) to minimize this, but it's still something
to consider.

: Many an AO-27 pass is unusable because of strong stations that cannot
: hear the satellite crooning "Heeelllooo" for the duration of the pass.
:

It's nice to have, but I wonder why anyone would use the autopatch
to make doctors or dentists appointments.

... Take my advice, I don't use it anyway.

1580. Little Keys

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-04 23:56:16 UTC
From: hideg@spsd10b.erim.org
Message-ID: <HIDEG.94May4235616@spsd10b.erim.org>
Source record: 267506

Did anyone see the tiny straight keys for sale in the Dayton Hamvention flea market?

There was a car parked somewhere in row 1, 2, or 3, just west of the main arena (near the pub). There were a couple of these miniature keys on the trunk lid. One had a tag under it that read something like "very rare". And it was marked $35. The proprietor of the display was not around. The key felt really good. I'm kicking myself now for not waiting around for the fellow to return.

Anybody know who that guy is? I'd like to get in touch with him.

You know, anyone could have simply walked off with those keys.

Any info would be appreciated.

One thing that I dorked around with was a phase shift detector using
a couple of op amps as zero-cross detectors and a micro-controller.
Phase shift meters are ridiculously expensive. I would think it would
be relatively simple to get one going with a micro and a couple of
op amps, capacitors and diodes etc. Might even be able to sell it.
You need to be able to meter current and voltage phases for a
commercially attractive project.

> > it.
That comment isn't really worthy of a response, since all the
1100/2200 systems I worked on would easily BURY an MVS box...but how
hard would that be? ;^)

> This Sperry is quite possibly still what is in use.
Actually, it is NOT a Sperry or Unisys... it is a truly ancient
Honeywell 200/2000 machine of late 1960s vintage that is programmed in
EasyCoder, an AutoCoder (you gotta be OLD to know what that is! ;^)
type language... economics is why they still are trying to run it...
Federal administrative systems are among the very LAST to be updated.
Look at the mess the Social Security Admin was in not long ago...and
the FCC administrative computing is even less visible... save to hams
on on the UseNet groups! ;^)

> because the FCC is junking their Sperry and moving to a PC LAN this
> month (supposedly electronic filing by the VECs will then be possible
> by the end of June).
Geez... PC LAN... WOW.... NOT!!!! Too bad they couldn't get a real
computer that supported their needs easily and would have some growth
to it... Bad Boy Bill Gates didn't write DOS for future...just lits of
silly people gave him money to keep it obscure.

Oh well. I do hope electronic filing happens before the 1997 WARC...
but you'll turn blue if you hold your breath... making a PC LAN
actually work is no trivial event...

I have a new FT530 also, and it is also from lot #25, and
it also had a green wire loop jumper on pad 13. I simply
snipped it, and put the radio back together. After that
you're supposed to hold down both the up and down arrows
while turning the radio on. The first time I did this,
I did not get out of band RX. I simply tried again, and it
worked the second time. Didn't have to remove the batteries
or anything, but it did erase all my memories & settings.
Maybe Yaesu added the wire jumper to make the mod easier ?!?

I am looking for help from someone in Illinois - I would like a copy of the state bill that would exempt amateurs from overly restrictive antenna height restrictions. Actually if there are any other states that have proposed legislation of a similar nature I could use copies of those bills (or laws) as well.

We had a pretty nasty tornado come through here last week, and amateur radio volunteers were some of the first rescue personnel on the scene.

Therefore I want to "strike while the iron is hot" and get copies of legislation from other states to my congressperson while the twister is still fresh in her mind....

Thanks in advance,

Tim

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

04 MAY, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 04 MAY, 1994

NOTE: Energetic electrons at greater than 2 MeV are now at high to very high
density levels. The background x-ray flux is less than A1.0.

NOTE: The Effective Sunspot Number for 03 MAY 94 was 28.0.
The Full Kp Indices for 03 MAY 94 are: 6- 7- 6o 5- 4+ 3o 3+ 3o
The 3-Hr Ap Indices for 03 MAY 94 are: 62 109 75 36 34 16 20 15
Greater than 2 MeV Electron Fluence for 04 MAY is: 2.2E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. No flares were observed in
the last 24 hours.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field was predominantly unsettled to active.
Some minor storm level activity was observed at high latitudes
from 0300-1200Z.

STD: Energetic electrons at greater than 2 MeV are now at high
to very high density levels. Overall electron fluence is also
at high levels today.

Geophysical activity forecast: the geomagnetic field is
expected to be generally active tomorrow with a possiblility
for isolated storm periods during local nighttime hours.
Unsettled to active conditions should prevail for the
second and third days.

Event probabilities 05 may-07 may

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 05 may-07 may

A. Middle Latitudes
Active 30/25/20
Minor Storm 30/30/10
Major-Severe Storm 10/10/05

B. High Latitudes
Active 30/30/20
Minor Storm 35/30/10
Major-Severe Storm 10/10/05

HF propagation conditions continued below-normal over the
high and polar latitude regions today. Conditions should very
gradually improve over the next three days, although
near-normal propagation is not expected to return for several
additional days beyond the forecast period.

-- -- -- -- -- -- -- -- --- ------
Uncorrellated: 0 0 0 0 0 0 0 0 000 (0.0)

Total Events: 000 optical and x-ray.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep

IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

1594. Was this a bad idea?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-05 04:45:16 UTC
From: hoagy@illuminati.io.com
Message-ID: <2q9tks$npn@illuminati.io.com>
Source record: 267522

The happy news is, as of April 26, my tech no-code license was
FINALLY PROCESSED! As of today(Wednesday May 4), it has yet
to arrive in the mail. Talk about slow u.s. mail. Anyhow..

7 weeks ago, I was driving in the middle of nowhere with my
finacee'. Suddenly, this rather gut-wrenching accident
occured about 1/4 mile up the road. With no houses around,
and no one else on the road, I pulled out my HT, and
fired up a local repeater. I heard someone on it, so I called
"Break...Break for police." Thankfully, someone heard me
and told me to go ahead.

"This is unlicensed Matthew T. Rupert. I've got a bad accident
out here at <such and such>. Need ambulance and emergency response.
Will stand by and repeat"

Within 7 minutes, I had three police cars, one ambulance, one
firetruck on scene. I tucked away my HT, and went to the 2nd
police car(the 1st was busy trying to help the accident victims)
and gave my report. One of the victims was losing blood, and
had I driven another 2 miles to the first house, it would have taken that much
longer.

No questions were asked how I phoned it in. No one on the network
that Thursday mentioned it, though the person who took my call was on
the net that night.

Since I was unlicensed, was it illegal for me to use my radio
on an amateur frequency for this situation?

I'm telling myself "No, since it was a valid emergency". However,
I dunno. Would someone help me with this one? I'm still wondering
if I was right/wrong. I *do* plan to let the person who answered
my call that it was me when...IF my ticket gets here tomorrow,
just in time for THursday night network.

1595. Older ham gear (antiques?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-05 05:03:00 UTC
From: sandy.dumitru@kandy.com
Message-ID: <c4.1574.2547.0NB76AF8@kandy.com>
Source record: 267430

From: Sandy Dumitru (sandy.dumitru@kandy.com)
Newgroup: rec.radio.amateur.misc
Subject: Older ham gear (antiques?)

I have an assortment of mostly older ham gear which must be sold.
This belonged to my father (W4IXJ, and formerly W2IXJ), who passed
away recently. I'm hoping that some knowlegeable hams out there
can help me determine appropriate selling prices for these items.
I don't know if they'd be considered relics or antiques, but here goes.

1) Hammarlund HQ One-Seventy
2) Heathkit Apache TX-1 (it weighs a ton!)
3) Heathkit Power Amplifier (goes with #2) (it weighs a ton too!)
4) Lafayette Slim Crystal Mic PA-42 - still sealed in plastic bag!

Also:

Swan Cygnet 270
Azden PCS-4000 (2 meters)

Any clues as to the value of these items is greatly appreciated.

Thanks,
Sandy Dumitru

Subject : RACES Bulletin #324

TO: ALL EMERGENCY MANAGEMENT AGENCIES VIA AMATEUR RADIO
INFO ALL COMMUNICATIONS VOLUNTEERS IN GOVERNMENT SERVICE
INFO: ALL AMATEURS U.S (@USA: INFORMATION), CAP, MARS
FROM: CA GOVERNORS OFFICE OF EMERGENCY SERVICES
(W6SIG@WA6NWE.CA) Ph: 916-262-1600
2800 Meadowview Rd., Sacramento, CA 95832
Landline BBS Open to All: 916-262-1657
RACESBUL.324 RELEASE DATE: May 2, 1994

Subject: OPS - Responding to a Call-Out

"...I might be willing to respond on something like the
Northridge quake, where there is no damage in my area. However I
am not about to leave my home unprotected, without gas,
electricity, water or telephone if there is looting and civil
unrest and the police are stretched so thin that they cannot
adequately cope."

Comments: In an emergency, our first concern is rightly
that of our family or other personal priority. There are and can
be instances where it is inappropriate to respond to any aspect
of a call-out. There are those, however, who have prepared their
families in what to do and how to cope so that they can respond
to a duty station and stay as long as needed (with adequate rest
periods inter-spersed as appropriate.) Such people will
literally go around almost any barrier to respond to the local
need if that is expected of them and they have been trained for
that response level. Essentially it depends on our personal
situation, perspective and preparedness; physical as well as
mental. It's our choice!
It may not be possible to make preparations for every
eventuality, but it starts with our personal view point. There
is no "right" or "wrong" perspective or reaction. Each must
chose. Experience does show that there are those whose
dedication is at such a level that the concerns expressed are
transcended by their own choice. It depends on ones personal
priorities. There are instances of response in face of total
personal loss, as well as all conditions in between. Again: it's
your choice. Whatever you chose is right for you.

From: darryl.linkow@ledge.com
Message-ID: <cf.4422.438.0N2EE966@ledge.com>
Source record: 267497

RC>I have an Icom W2A in nice condition I'd like to sell. It has the BP84
RC>BP85 12V battery pack
RC>BC72 Desktop fast charger (really the only way to go!)
RC>HM65 Lapel Speaker Mike
RC>The BC72 charger also in in the original box.

RC>I am asking $400 for it with the buyer paying shipping.

Richard,
Your used W2A with the accessories is probably worth less than
your asking price. I have virtually no money, due to a prolonged
period of unemployment, coupled with a financial blow resulting
from the damage to my property from the Januaru earthquake. But
I do have a lot of hardware that I could offer in trade for your
Icom package above. I could offer you a trade for about $400
worth of the following items. Let me know if any of the items I
have are of interest to you:

HARDWARE FOR SALE
~~~~~~~~~~~~~~~~~
FLOPPY DISKETTES (all are pre-formatted MS-DOS)
~~~~~~
720K 3" ------- 50 diskettes - $20.00
1.44M 3" (720K punched out and formatted 1.44M) - $20.00 for 50
360K 5" ------- 50 diskettes - $5.00

DTK XT - 640K RAM, two 360K floppies, monochrome card with parallel
port, Samsung amber monitor, Western Digital hard disk controller
card, 98 key extended keyboard, Citizen Premiere 35 daisywheel wide
carriage printer and printer cable - $250.00 plus shipping

OTHER STUFF!
~~~~~~~~~~~~
IBM AT 128/640 memory expansion card - comes with 128K RAM -
upgrades an IBM AT 512k to 640K, can add another 512K on the
card for extended memory $25.00

Genuine IBM PC/XT keyboard w/83 keys, plexi dust cover... $35.00

Texas Instruments Appletalk/RS-232 port for microLaser... $50.00
Texas Instruments new developer cartridge for microLaser.. $95.00
Texas Instruments new OPC cartridge (drum)for microLaser..$110.00

AST 4-port serial card - NEW, w/4 socketed 16550 UARTS... $100.00
Practical Peripherals Microbuffer In-Line w/256K RAM.... $100.00
RS232 Gender Changer Male/Male..... $10.00
~~~~~~~~~~~~

Kensington Universal Printer Stand..... $10.00
2 Electricord XP 6 outlet strip surge protectors (new)..ea $10.00
Compaq portable floppy control/printer port - excellent... $25.00
Chatsworth Data mark sense card reader w/serial cable.... $150.00
Calltext 5000 text to speech converter & telephone communications
board - currently sells for $3200 ----sale!..... $150.00

NS16450N UARTS ---- $5.00 each
NS16550AFN UARTS -- $15.00 each

4 - 256K-70ns 3-chip SIMMs - $10.00 each or $35.00 for all

4 - CY7C185-25PC (8Kx8) static RAM, 25 ns. - $5.00 each

63 pcs - 4164 - 120 ns DRAMs - $.50 each or $30.00 for all
6 pcs - 41256 - 70 ns DRAMS - $1.25 each or $7.00 for all
2764 EPROMs - $2.50 each

Magnatech 16mm recorder/reproducer - can be modified to 35mm.
comes in large Anvil case on wheels.....$1500.00

KLOSS Video projector & screen - 6&#65533;" foot diagonal screen,
rebuilt projection tubes, will sell in Southern CA area
only, since it is too large to ship by UPS!.....$1150.00

PRO SOUND GEAR:

Nagra 4.2 - excellent condition, this machine is loaded: 7" lid,
ALC, QFM, resolver, etc.....$3500.00 OBO

4 mini-mics (same as TRAM) with 4-pin LEMO connectors
wired for for Vega XMTRs.....$75.00 each

2 Vega 66/77 radio mics (good old non-Dynex!).....$600.00 each

1 Vega 66/77 radio mic (Dynex).....$650.00

1 ASC digital bloop lite, good condition.....$150.00

Above prices do not include shipping. If interested, leave
message here or call.

> Imagine it is 1971 and you are chair of the new Federal Computer
>Commission. This commission has been established to regulate the natural
>monopoly of computer technology as summed up in the famous Grosch's Law.
>In 1956 IBM engineer Herbert Grosch proved that computer power rises by the
>square of its cost and thus necessarily gravitates to the most costly
>machines. According to a famous IBM projection, the entire world could use
>some 55 mainframes, time-sharing from dumb terminals and keypunch machines.
>The owners of these machines would rule the world of information in an
>ascendant information age. By the Orwellian dawn of 1984, Big Bre'r IBM
>would establish a new digital tyranny, with a new elite of the data-rich
>dominating the data-poor.
>
> As head of the computer commission, you launch a bold program to
>forestall this grim outcome. Under a congressional mandate to promote
>competition for IBM and ensure the principle of universal computer service,
>you ordain the creation of some 2,500 mainframe licenses to be auctioned to
>the highest bidders (with special licenses reserved for minorities, women and
>farmers). To ensure widespread competition across all of America, you
>establish seven licenses in each metropolitan Major Trading Area and seven in
>every rural Basic Trading Area as defined by Rand McNally. To guarantee
>universal service, you mandate the free distribution of keypunch machines to
>all businesses and households so that they can access the local computer
>centers.
>
> In establishing this auction in 1971, you had no reason at all to notice
>that a tiny company in Mountain View, Calif., called Intel was about to
>announce three new technologies together with some hype about "a new era of
>integrated electronics." After all, these technologies--the microprocessor;
>erasable, programmable read-only memory (EPROM); and a one-kilobit dynamic
>random access memory (DRAM)--were far too primitive to even compare with
>IBM's massive machines.
>
> The likely results of such a Federal Computer Commission policy are not
>merely matters of conjecture. France pretty much did it when it distributed
>free Minitel terminals to its citizens to provide them access to government
>mainframes. While the United States made personal computers nearly
>ubiquitous buying perhaps 100 million since the launch of the Minitel in the
>late 1970s the French chatted through central databases and ended up with
>one-quarter as many computers per capita as this country, and one-tenth the
>number of computer networks. Today, PC networks are leading the US
>economy to world dominance while Europe founders without a single major
>computer company, software firm or semiconductor manufacturer.

>
> IT IS NOW 1994, and Reed Hundt, the new chairman of the Federal
>Communications Commission, is indeed about to hold an auction.
>
> Rather than selling exclusive mainframe licenses, the current FCC is
>going to sell exclusive ten-year licenses to about 2,500 shards of the radio
>spectrum. Meanwhile, a tiny company called Steinbrecher Corp. of Burlington,
>Mass., is introducing the new microprocessor of the radio business.
>
> In the world of radio waves ruled by the Federal Communications
>Commission, the Steinbrecher MiniCell is even more revolutionary than the
>microprocessor was in the world of computing. While Intel put an entire
>computer on a single chip, Steinbrecher has put an entire cellular base
>station--now requiring some 1,000 square feet and costing $ 1.5 million--in
>a box the size of a briefcase that costs $ 100,000 today. Based on a unique
>invention by Donald Steinbrecher and on the sweeping advance of computer
>technology, the MiniCell represents a far bigger leap forward beyond the
>current state of the art than the microprocessor did. What's more, this
>MiniCell is in fact much superior to existing cellular base stations. Unlike
>the 416 hard-wired radio transceivers (transmitter-receivers) in existing
>base stations, the MiniCell contains a single digital broadband radio and is
>fully programmable. It can accommodate scores of different kind of cellular
>handsets.
>
> Most important, the MiniCell benefits from the same technology as the
>microprocessor. Making possible the creation of this broadband digital radio
>is the tidal onrush of Moore's Law. In an antithesis of Grosch's Law, Gordon
>Moore of Intel showed that the cost-effectiveness of microchip technology
>doubles every 18 months. This insight suggested the Law of the Microcosm--
>that computing power gravitates not to the costliest but to the cheapest
>machines. Costing $ 100,000 today, the MiniCell will predictably cost some
>$10,000 before the turn of the century.
>
> In time, these digital MiniCells will have an impact similar to that of
>the PC. They will drive the creation of a cornucopia of new mobile
>services--from plain old telephony to wireless video conferencing--based on
>ubiquitous client/server networks in the air. Endowing Americans with
>universal mobile access to information superhighways, these MiniCells can
>spearhead another generation of computer-led growth in the US economy.
>Eventually, the implications of Steinbrecher's machines and other major
>innovations in wireless will crash In on the legalistic scene of the FCC.
>
> And that's only the beginning of the story.
>
> Going on the block In May will be 160 megahertz (millions of cycles per
>second) of the radio frequency spectrum, divided into seven sections of
>between 10 and 30 megahertz In each of 543 areas of the country, and devoted
>to enhanced Personal Communications Services (PCS).
>

> Existing cellular systems operate in a total spectrum space of 50
>megahertz in two frequency bands near the 800 megahertz level. By contrast,
>PCS will take four times that space in a frequency band near two gigahertz
>(billions of cycles per second). Became higher frequencies allow use of
>lower-power radios with smaller antennas and longer-lasting batteries, PCS
>offers the possibility of a drastically improved wireless system.
>Unfortunately, the major obstacle to the promise of PCS is the auction.
>
> Amid the spectrum fever aroused by the bidding, however, new radio
>technologies are emerging that devastate its most basic assumptions. At a
>time when the world is about to take to information superhighways In the
>sky--plied by low-powered, pollution-free computer phones--the FCC is in
>danger of building a legal infrastructure and protectionist program for
>information smokestacks and gas guzzlers.
>
> Even the language used to describe the auction betrays its fallacies.
>With real estate imagery, analysts depict spectrum as "beachfront property"
>and the auction as a "land rash." They assume that radio frequencies are
>like analog telephone circuit: no two users can occupy the same spot of
>spectrum at the same time. Whether large 50-kilowatt broadcast stations
>booming Rush Limbaugh's voice across the nation or milliwatt cellular phones
>beaming love murmurs to a nearby base station, radio transmitters are assumed
>to be infectious, high-powered and blind. If one is on the highway, everyone
>else has to clear out. Both the prevailing wisdom and the entrenched
>technology dictate that every transmitter be quarantined in its own spectrum
>slot.
>
> However, innovations from such companies as Steinbrecher and
>Qualcomm Inc. of San Diego overthrow this paradigm. Not only can numerous
>radios operate at non-interfering levels in the same frequency band, they can
>also see other users' signals and move to avoid them. In baseball jargon,
>the new radios can hit 'em where they ain't; in football idiom, they run for
>daylight. If appropriately handled, these technologies can render spectrum
>not scarce but abundant.
>
> These developments make it retrograde to assign exclusive spectrum
>rights to anyone or to foster technologies that require exclusivity.
>Spectrum no longer shares any features of beachfront property. A wave
>would be a better analogy.
>
>
>
>The New Rules Of Waves
>
> In the early decades of this century, radio was king. Electronics
>hackers played in the waves with a variety of ham, citizens band and
>short-wave machines.
>
> Experimenting with crystal sets, they innocently entered the domain of

>solid-state devices and acquired some of the skills that fueled the
>electronic revolution in the United States and the radar revolution that won
>World War II. The first point-contact transistor, created by John Bardeen
>and Walter Brattain at Bell Labs in 1948, functioned like a crystal radio.
>The first major solid-state product was a 1954 Texas Instruments pocket radio
>with six germanium transistors.
>
> Over the following decades, the radio became a mass commodity. There
>are now some 230 million radios in the United States alone, not even
>including more than 16 million cellular phones (which are in fact portable
>two-way radios). Radios roll off Asian assembly lines at a rate that might
>be meaningfully measured in hertz (cycles per second), and they come in sizes
>fit for pockets, belts, watches and ears. But the romance of radio has died
>and given way to the romance of computers.
>
> Today it is PC technology that engages the youthful energies previously
>invested in radio technology. The press trumpets a coming convergence
>between computers and TVs and games and films. But no one talks much about
>radios. For many years, we have been taking radios for granted.
>
> As the foundation of wireless communications, however, radio--no less
>than TV or films--will burst into a new technoscape as a result of a
>convergence with computers. The hackers of the '50s and '60s are joining
>forces with the hackers of the '80s and '90s to create a new industry.
>Moore's Law is about to overran the world of radio.
>
> You double anything every 18 months and pretty soon you find yourself
>with a monster. During the 1970s and 1980s, Moore's Law overturned the
>established order in the computer industry and spawned some 100 million
>personal computers that are as powerful as million-dollar mainframes were
>when the revolution began. In the current decade, Moore's Law is upending
>the telephone and television industries with interactive teleputers that will
>be able to send, receive, shape and store interactive full-motion video.
>And during the next five years, Moore's Law is going to transform exotic and
>costly radio equipment once consigned to the military and outer space into
>the basic communications access routes for the new world economy.
>
> To understand this new world of radio, however, you must forget much of
>what you learned about the old world of radio. For example, these new radios
>differ radically from the radios of the past in the way they use spectrum,
>the way they interfere with one another and the way they are built.
>
> For some 15 years, a hacker of the 1950s named Don Steinbrecher and a
>small group of students and associates have been making the world's most
>powerful and aerobatic radios. Steinbrecher radio gear can soar to spectrum
>altitudes as high as 94 gigahertz to provide radar "eyes" for smart bombs and
>pies, plunge down to the cellular band at 800 megahertz to listen in on phone
>calls or drop discretely to 30 megahertz--waves that bounce off the
>ionosphere--for remote over-the-horizon radar work identifying cocaine

>traffickers flying in low from Latin America. At the same time, some of
>these radios may soon command enough dynamic ranges of accurate broadband
>reception--rumored to be as high as 120 decibels (one trillion-to-one)--to
>detect a pin drop at a heavy-metal rock concert without missing a
>high-fidelity note or twang.
>
> Like every radio transceiver, a Steinbrecher radio must have four key
>components: an antenna, a tuner, a modem and a mixer. The antenna part is
>easy; for many purposes, your metal shirt hanger will do the trick (backyard
>wire fences collect millions of frequencies). But without tuners, modems and
>mixers, nothing reaches its final destination--the human ear.
>
> A tuner selects a desired carrier frequency, usually by exploiting the
>science of resonant circuits. A modem is a modulator-demodulator. In
>transmitting it applies information to the carrier frequency by wiggling the
>waves in a pattern, called a modulation scheme, such as AM or FM. In
>receiving the modem strips out (demodulates) the information tom the carrier
>wave.
>
> The key to Steinbrecher radios is the broadband mixer. It surmounts
>what was long seen as an impossible challenge: moving a large array of the
>relatively high career frequencies on the antenna down to a so-called
>baseband level where they can be used without losing any of the information
>or adding spurious information in the process. Compared to FM carrier
>frequencies of 100 megahertz or even PCS frequencies of two gigahertz,
>baseband audio frequencies run between 20 hertz and 20 kilohertz.
>
> Mixers were the basic Steinbrecher product, and in 1978 and 1980,
>Steinbrecher acquired patents on a unique broadband mixer with high range
>and sensitivity called the Paramixer. Even to its expected military
>customers, the Paramixer was a hard sell because other radio components were
>unable to keep pace with its performance. Today, however, the Paramixer is
>the foundation of the Steinbrecher radio in the MiniCell.
>
> In the old world of radio, transceivers integrated all of these
>components--antenna, tuner, modem and mixer--into one analog hardware
>system. Because the radio is analog and hard-wired, its functions must be
>standardized. Each radio can receive or transmit only a very limited set of
>frequencies bearing information coded in a specific modulation scheme and
>exclusively occupying a specific spectrum space at a particular power range.
>If you are in the radio business--whether as an equipment manufacturer such
>as Motorola or Ericsson, a provider of services, such as McCaw or Comsat, or
>a broadcaster, such as NBC or Turner--you care deeply about these hard-wired
>specifications, frequencies and modulation schemes.
>
> Comprising the "air standard," these issues embroil businesses,
>politicians, standards bodies and regulators in constant warfare. For
>everything from High Definition Television to digital cellular and cordless
>telephony, standards bodies are wrangling over frequencies and modulation

>schemes.
>
>
>
>How Digital Radios Can End The Spectrum Wars
>
> To the people at Steinbrecher Corp., all these wrangles seem utterly
>unnecessary. With antennas, tuners, modems and mixers, wideband digital
>radios perform all the same functions as ordinary radios. Only the antenna
>and mixer are in hardware, and these are generic; they don't care any more
>about air standards than your shirt hanger does.
>
> In Steinbrecher radios, all of the frequency tuning, all of the
>modulating and demodulating, all of the channelization, all of the coding and
>decoding that so embroil the politicians are performed by programmable
>digital signal processors and can be changed at a base station in real time.
>Strictly speaking, the tuner and modem are not part of the base station radio
>at all. The broadband radio in a Steinbrecher base station can send or
>receive signals to or from any handset or mobile unit operating within its
>bandwidth (in current cellular systems the full 12.5 megahertz of the band;
>in PCS, still larger bands of as much as 30 megahertz).
>
> All the processing of codes, frequencies, channels and modulations, as
>well as all special mobile services, can move onto computers attached to the
>network. Steinbrecher technology thus can open up the spectrum for open and
>programmable client/server systems like those that now dominate the
>computer industry. Moore's Law, in fact, is changing radios into portable
>digital computers. The most pervasive personal computer of the next decade
>will be a digital cellular phone operating at least 40 MIPS (millions of
>instructions per second).
>
> Today the performance of analog-to-digital converters defines the limits
>of Steinbrecher radios. Even if the mixers are perfect, the system's
>performance can be no better than the accuracy of the A/D processors that
>transform the output of the mixers into a digital bit stream for the DSPs.
>Steinbrecher estimates that better broadband A/D converters--which can sample
>wave forms more accurately at high frequencies--could increase the
>performance ofSteinbrecher systems by an amazing factor of 10. Pushed by
>demands and designs from Steinbrecher, Analog Devices and other suppliers are
>advancing converter technology nearly at a pace with Moore's Law, and
>Steinbrecher's broadband digital radios are rapidly approaching the ideal.
>
> As Don Steinbrecher puts it, broadband A/D and DSP have changed
>wireless "turn a radio business to a computer business." At first, the
>computer portion of a broadband radio was very expensive. Until the early
>1980s, military customers performed advanced broadband analog-to-digital
>conversion and digital signal processing on million-dollar custom
>supercomputers. In 1986, an advanced DSP system for graphics at Bell Labs
>entailed the use of 82 AT&T DSP32 chips and supporting devices in a custom

>computer that cost some $ 130,000. Today, these same functions are performed
>on an Apple Quadra 84o AV using an AT&T 3210 running at 33 megaflops
>(million floating-point operations per second) and 17 MIPS for under $ 20 in
>volume. This rising tide of advances in digital technology, propelled by
>Moore's Law, is about to sweep Steinbrecher's recondite radio company into
>the midst of a mass market in cellular telephony.
>
> And the entire cellular and PCS industries will be beating a path to
>Steinbrecher's door. Just as millions of people today have learned the
>meaning of MIPS and megabytes, millions of people around the world, believe
>it or not, are going to come to understand the meaning of "spurious-free
>dynamic range."
>
> As a very rough analogy, imagine cranking the volume of your radio as
>high as possible without marring the desired signal with static and
>distortion. The spurious-free dynamic range of your radio would measure the
>distance between the lowest and the highest volumes with a clear signal. In
>more technical terms, spurious-free dynamic range is defined as the range of
>signal amplitudes that can simultaneously be processed without distortion or
>be resolved by a receiver without the emergence of spurious signals above the
>noise floor.
>
> In building broadband radios with high dynamic range, however,
>Steinbrecher faced a fundamental technical problem. As a general rule,
>bandwidth is inversely proportional to dynamic range. You can have one or
>the other, but you can't have both. The broader the band, the more difficult
>it is to capture all of its contents with full accuracy and sensitivity or
>with full spurious-free dynamic range. An ordinary radio may command a high
>dynamic range of volumes because it is narrowband.
>
> But Steinbrecher radio does not begin by tuning to one frequency alone;
>it gasps every frequency in a particular swath of spectrum. In some extreme
>Paramixer applications (94-gigahertz radar, for example), the bandwidth could
>be 10 gigahertz--larger than the entire range of spectrum commonly used in
>the air, from submarine communications at 60 hertz to C band satellite at 6
>gigahertz.
>
> In most Steinbrecher applications that require high dynamic range,
>however, the bandwidth runs between a few megahertz and hundreds of
>megahertz (compared to 30 kilohertz in a cellular phone). Unless all of the
>frequencies captured by the broadband radio are really present in the band
>rather than as artifacts of the equipment--in technical jargon, unless the
>signals are spurious-free--the radio user cannot tell what is going on,
>cannot distinguish between spurs and signals.
>
> Steinbrecher has devoted much of his career to the graft of
>spurious-free dynamic range. Soon after he arrived at Massachusetts
>Institute of Technology in September 1961 to pursue work on device physics,
>he moved into the school's new Radio Astronomy Lab. The radio astronomers

>were using millimeter waves at 75 gigahertz to probe remote galaxies and
>pour through evidence of a big bang at the beginning of time. Because the
>return reflections from outer space were infinitesimal, the radio telescopes
>had to command a bandwidth of at least two gigahertz, a spurious-free dynamic
>range of more than 100 decibels (tens of billions-, or even trillions-to-one)
>and noise levels of less than 10 decibels (millionths of a watt).
>
> The telescope signals turned out not to be spurious-free. More than 90
>percent of the receiver noise--the spurious signals--originated in the
>frequency converter or mixer, which translated the 75-gigahertz millimeter
>waves in cascading analog stages of diodes and transistors, fed by tunable
>local oscillators, down to baseband levels that could be usefully analyzed.
>This impelled Steinbrecher's obsession with spurious-free dynamic range in
>mixers.
>
> To achieve high dynamic range in broadband mixers, Steinbrecher
>discovered, was chiefly a problem of the basic physics of diodes. At the
>University of Florida, at ECI Corp. and at MIT, Steinbrecher had pursued
>studies in device physics focusing on the theory of PIN junctions--the
>positive-negative interfaces that create the active regions in diodes and
>transistors. How cleanly and abruptly they switch from on to off--how fully
>these switches avoid transitional effects--determines how well they can
>translate one frequency to another without spurs.
>
> From this experience, Steinbrecher concluded in 1968 that receivers
>could be built with at least a thousand times more dynamic range than was
>currently believed possible. He assigned his student Robert Snyder to
>investigate the issue mathematically, integrating the possible performance of
>each component into the performance of a mixer. Snyder's results stunningly
>continued Steinbrecher's hypothesis. They predicted that in principle--with
>unlimited time and effort--the linearity and dynamic range of a radio could
>be improved to any arbitrary standard. In a key invention, Steinbrecher
>figured out how to create a diode circuit that could produce a perfect square
>wave, creating a diode with essentially zero switching time.
>
> Steinbrecher then proceeded to put his theory into practice by
>developing the crucial diode and field-effect transistor arrays, mixers,
>amplifiers and other components necessary to build a working system of
>unparalleled dynamic range. Most of their advances required detailed
>knowledge of the behavior of P/N junctions. To this day, the performance of
>Steinbrecher's equipment depends on adjustment to unexpected nonlinearities
>and noise sources that were discovered as part of Robert Snyder's work but
>are still not integrated into the prevailing models of diode behavior.
>
> Beyond radio astronomy, the people who were interested in analyzing
>signals of unknown frequencies, rather than tuning into preset frequencies,
>were in the field of military intelligence. Enemies did not normally
>announce in advance the frequencies they planned to use or how they would
>modulate them. Steinbrecher Corp.'s first major contract came in the early

>1980s for remote over-the-horizon radar (ROTHR) systems used to detect planes
>carrying drugs from Latin America. Steinbrecher also won contracts to supply
>MILSTAR satellite transceivers and 94-gigahertz "eyes" for smart munitions
>and jet aircraft.
>
> In 1986 these large potential businesses began to attract venture
>capitalists, including EG&G venture partners, The Venture Capital Fund of New
>England and Raytheon. As often happens, the venture capitalists sought
>professional management. They pushed Steinbrecher upstairs to chairman and
>summoned a Stanford EE graduate named Douglas Shute to manage the
>company's move from a manufacturer of hard-sell mixers Into a producer of
>revolutionary digital radios.
>
> Still, Steinbrecher Corp. long remained a tiny firm occupying a dingy
>one-story building in a Woburn, Mass., industrial park, where it rarely
>pulled in more than $ 5 million in revenues. Not until the early 1990s, when
>its technology converged with Moore's Law, did the company begin to escape
>its niche.
>
>
>
>Collision With Texas Instruments' DSP
>
> Indeed, strictly speaking even Moore's Law was not enough to make this
>Pentagon turkey fly. Crucial was Texas Instruments' mid-1980s campaign to
>remake the digital signal processor into a commodity device comparable to
>Intel's microprocessor. Creating development systems and software tools, TI
>transformed the DSP from an exotic and expensive printed circuit board full
>of integrated circuits into a single programmable microchip manufactured in
>volume on the same factory floor the company used to produce hundreds of
>millions of dynamic random access memories. The results exceeded all
>expectations. Outpacing Moore's Law by a factor of nearly four for some
>eight years so far, DSP cost-effectiveness began soaring tenfold every two
>years. Pricing the devices for digital radios, Douglas Shute saw that the
>wideband digital radio had "moved onto the map as a commercial product."
>
> Also in 1989, a secret contractor asked the company if its radios could
>snoop on calls in the cellular band. After gigahertz explorations in radio
>astronomy and military projects, the 12.5 megahertz of the cellular bandwidth
>seemed a piece of cake. Although this national security application never
>came through, the idea galvanized the company. If it should need a
>commercial market, cellular telephony was a good bet.
>
> The pull of opportunity, however, is usually less potent than the push
>of catastrophe--which is the key reason for socialism's failure. Insulating
>the economy from failure, it also removes a key spur for success. For all
>the bureaucratic rigmarole of military procurement, producers for the
>Pentagon live in a relatively comfortable socialist world of cost plus
>contracts.

>
> In 1989, however, just before the fall of the Soviet Union, Steinbrecher
>began to get clear signals from Washington that the market for his products
>was about to collapse. MILSTAR remained an experimental program; the
>ROTHR system was halted after the creation of just four stations with 1,600
>mixers; and suddenly the cellular opportunity was not merely an attractive
>option--it was crucial for survival.
>
> When Shute and Steinbrecher viewed the cellular scene in the United
>States, however, they became increasingly disdainful. These radio companies
>had no more idea of what was possible in radio technology than had the MIT
>engineering lab when he arrived in 1961. Indeed, Steinbrecher Corp.s first
>potential customer--a wireless colossus--refused even to meet with Shute: The
>chief technologist said he had investigated digital radios several years
>before and determined they were unable to achieve the requisite dynamic
>range. Moreover, at scores of thousands of dollars apiece, digital signal
>processors were far too expensive. Most cellular executives, along with
>their Washington regulators, seemed stuck in a 1970s time warp when analog
>still ruled and DSP was a supercomputer.

>(Continued from previous message)
>
>Importing Obsolescence
>
> As a result, the entire industry was convulsed by what Shute and
>Steinbrecher saw as a retrograde war over standards. Because Europe in
>general lagged far behind the United States in adopting analog cellular
>technology, the EEC had sponsored a multinational drive to leapfrog the
>United States by adopting a digital standard, which could then be exported
>to America. The standard they chose was called GSM (global services mobile),
>a time-division multiple-access (TDMA) scheme that exceeded analog capacity
>by breaking each channel into three digital time slots. Racing to catch up,
>the American industry adopted a similar TDMA approach that also increased the
>current system's capacity by a factor of three. With McCaw Cellular in the
>lead, American firms quickly committed themselves to deploy TDMA as soon as
>possible.
>
> Then in 1991, Qualcomm unleashed a bombshell Exploiting the
>increasing power of DSPs to process digital codes, the company demonstrated a
>spread-spectrum, code-division multiple-access (CDMA) modulation scheme
>that not only increased capacity some twentyfold over analog but also allowed
>use of the entire 11.5 megahertz of the cellular bandwidth in every cell. To
>prevent interference between adjoining cells, analog and TDMA systems could
>use a frequency in only one cell out of seven.
>
> Much of the industry seemed paralyzed by fear of choosing the wrong
>system. To Shute and Steinbrecher, however, these fears seemed entirely
>reckless. Using wideband digital radios, companies could accommodate any
>array of frequencies and modulation schemes they desired TDMA, CDMA, voice,
>data and eventually even video. Shute resolved to adapt Steinbrecher's
>advanced radio technology to these new markets. In mid-1991, Shute rushed
>ahead with a program to create a prototype cellular transceiver that could
>process all 12.5 megahertz of the cellular bandwidth and convert it to a
>digital bit stream.
>
> The first major customer for the radios turned out to be ADC-Kentrox, a
>designer of analog cell extenders designed to overcome "dead zones" caused by
>large buildings in urban areas. This system was limited in reach to the few
>hundred meters the signals could be sent over analog wires without
>deterioration. By converting the signals to digital at the remote site, the
>Steinbrecher radio extended this distance from hundreds of meters to scores
>of kilometers and allowed the price of the product to remain at $ 100,000.

>
> But these gains concealed the potential impact and meaning of the
>Steinbrecher technology. Once again, the Steinbrecher radios are being used
>to complement the existing system rather than overthrow it. In a similar
>way, McCaw plans to buy some $ 30 million worth of Steinbrecher machines to
>carry through its cellular digital packet data (CDPD) network. To be
>provided to 95 percent of McCaw's regions by the end of 1995, CDPD is a data
>overlay of the existing cellular system, which allows users of the current
>analog system to send digital data at a rate of 19.2 kilobits per second,
>compared to the 9.6-kilobit-per-second rate offered by most modems over
>twisted-pair wires.
>
> The Steinbrecher radio can survey any existing swath of spectrum in real
>time and determine almost instantly which channels are in use and which are
>free. It is this capability that convinced McCaw to buy Steinbrecher data
>cells despite the commitment of McCaw's putative owner, AT&T, to sell
>narrowband units made by Cirrus Logics' subsidiary Pacific Communications
>Sciences Inc. (PCSI), which have to scan through channels one at a time.
>McCaw is using the Steinbrecher radios as sniffers that constantly survey
>the cellular band and direct data bursts to those channels that are not being
>used at a particular time.
>
> Indeed, the immediate needs of the marketplace alone justify the
>adoption of Steinbrecher data cells. With modems and antennas increasingly
>available and even moving sometime next year to PCMCIA slots the size of a
>credit card, demand for wireless data is likely to soar.
>
> PCSI is now shipping a quintuple-threat communicator that fits into the
>floppy bay of an advanced IBM ThinkPad notebook or an Apple PowerBook,
>enabling them to send and receive faxes, make wireless or wire-line phone
>calls, dispatch data files across the existing cellular network or send CDPD
>packets at 19.2 kilobits per second. Speech recognition capabilities from
>IBM and Dragon Systems will come next year to personal digital assistants,
>permitting them to read or receive E-mail by voice. Although the first
>Newtons and Zoomers have disappointed their sponsors, the market will
>ignite over the next two years as vendors adopt the essential form factor of
>a digital cellular phone with computer functions rather than providing a
>kluge computer with a vaporware phone.
>
> Nonetheless, McCaw has more on its mind with Steinbrecher than merely
>gaining a second source for CDPD sniffers. By simultaneously purchasing
>some 10 percent of the company and putting chief technical officer Nicholas
>Kauser on the Steinbrecher board, McCaw is signaling not a tactical move but
>a major strategic thrust. The Steinbrecher rollout in fact represents
>McCaw's stealth deployment of broadband digital capability.
>
> Today the rival CDPD equipment from PCSI, Hughes and AT&T all can be
>made to perform CDPD communications as an overly to the existing cellular
>phone system. However, only the Steinbrecher systems can be upgraded to
>perform all of the functions of a base station and more, for voice, data and

>video. Only Steinbrecher allows the replacement of 416 radio transceivers,
>one for each channel, with one broadband radio and some digital signal
>processing chips. Only Steinbrecher can replace a $ 1.5 million,
>1,000 square foot cellular base station with a box the size of a briefcase
>costing some $ 100,000 but, thanks to Moore's Law, racing toward $ 10,000.
>
> It remains to be seen only whether McCaw will have the guts to follow
>through on this initiative by completely rebuilding its network to
>accommodate the wideband radio being installed at its heart.
>Self-cannibalization is the rule of success in information technology. Intel
>and Microsoft, for example, lead the way in constantly attacking their own
>products. But this mode of life is deeply alien to the telephone
>business--even an entrepreneurial outfit like McCaw.
>
> With new software and a simple upgrade to a MiniCell, the Steinbrecher
>DataCell will allow the McCaw system to handle all modulation schemes
>simultaneously--AMPS, TDMA, CDMA and future methods such as Orthogonal
>Frequency Division Multiple Access--obviating the need for hybrid phones.
>The multiprotocol and aerobatic capabilities of broadband digital radios
>could enable McCaw to roll out a cornucopia of PCS services--for everything
>from monitoring vending machines or remote power stations to tracking tracks
>and packages, and linking laptops and PDAs--while the rest of the industry is
>still paralyzed by wrangles over incumbent users, regulatory procedures,
>frequency access and radio standards.
>
> Making channel sizes a variable rather than a fixed function of radios,
>Steinbrecher systems offer the possibility of bandwidth on demand. They
>could open up the entire spectrum as one gigantic broadband pipe into which
>we would be able to insert packets in any empty space--dark fiber in the air.
>
>
>
>So Stop The Auction
>
> So what does this have to do with the impending spectrum auction?
>Almost everything. Strictly speaking, the FCC is leasing 10 year exclusive
>rights to radiate electromagnetic waves at certain frequencies to deliver
>PCS. This entire auction concept is tied to thousands of exclusive frequency
>licenses. It has no place for broadband radios that treat all frequencies
>alike and offer bandwidth on demand. It has no place for modulation schemes
>that do not need exclusive spectrum space. Continuing to use interference
>standards based on analog transmissions that are affected by every passing
>spray of radiation, FCC rules fail to grasp the far more robust nature of
>digital on-off codes with error correction. By the time the FCC gets around
>to selling its 1,500 shards of air, the air will have been radically changed
>by new technology.
>
> The FCC is fostering a real estate paradigm for the spectrum. You buy
>or lease spectrum as you would a spread of land. Once you have your license,
>you can use it any way you want as long as you don't unduly disturb the

>neighbors. You rent a stretch of beach and build a wall.
>
> The Steinbrecher system, by contrast, suggests a model not of a beach
>but of an ocean. You can no more lease electromagnetic waves than you can
>lease ocean waves. Enabled by new technology, this new model is suitable for
>an information superhighway in the sky. You can use the spectrum as much
>as you want as long as you don't collide with anyone else or pollute it with
>high-powered noise or other nuisances.
>
> In the Steinbrecher model, you employ the spectrum as you use any
>public right of way. You are responsible for keeping your eyes open and
>avoiding others. You cannot just buy a 10 year lease and then barge blindly
>all over the air in a high-powered vessel, depending on the government to
>keep everyone else off your territory and out of your way. The spectrum is
>no longer dark. The Steinbrecher broadband radio supplies you with lights
>as you travel the information superhighway. You can see other travelers and

1601. Re: digital speech transmission for HAMs?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-05 09:40:55 UTC
From: ega066@comp.lancs.ac.uk
Message-ID: <CpBpK7.CJD@comp.lancs.ac.uk>
Source record: 267498

There have been some pretty nifty advances in speech codec technology in recent years, and you can quite easily go down to 16 kb/s and less with good performance. With use of a reasonlable modulation scheme and good filtering, there's no reason that digital speech can't fit into existing 12.5 kHz channels. Some DSP may be required, but that needn't be a problem. With the possibility of 4.8 kb/s codecs, it won't be too long before 3kHz bandwidths are a practical proposition.

Message-ID: <2qaioe$e2c@lehtori.cc.tut.fi>
Source record: 267500

Just my thoughts of that PacketCluster Software.
I don't remenber what version we run in our local
node (OH3RCE), but it's not too good. Really hope
that someone will do better...

One of the biggest oddities is that You can disable all the
other commands, but not WX-announcements. And there are some
fellows, who just log in to give:" WX/F Has been raining lately!"
and then they just take disconnect. That's not fun when it happens
too often!
It also doesn't know how to handle O's with dots, and we do really
need those in our native language.

There are also several minor bugs, but perhaps those doesn't need
to be listed here.

Waiting for better days...

Pete

> until I drove to state police building, walked in and told dispatcher
> the situation. What bugged me, he had a cobra CB not 5 feet behind
> him, turned off & unplugged! USELESS!

The reason for this condition is the fact the dispatchers at the
various Police agencies usually are annoyed by the constant
noise level generated by the CB.

I used to work as a Police Officer, and upon occassion had to
work dispatch, so I know what it is like at times.

>
> Is there still a REACT organization in existance?
> Does anybody know how to contact them?

REACT exists they usually advertise in Popular Communications magazine
every month. However, if most local units are like the one in Dayton,
OH they have move to UHF in the GMRS bands. I see their members every
once in a while strutting around at an accident scene jabbering into
usually a Motorola HT90 or similar wearing their orange vests. Most
of the members I have met usually are "wannabe" cops, rather than
interested in helping someone.

>
> Is this something ARES would have an opinion on or even want to
> mess with?

My experience is Amatuer radio is slightly better than REACT. I have
been able to at least complete 20% of accident calls I originated
over the past 15 years on 2 meters. (I drove through OH, WV, PA, MD
and VA on business or pleasure alot since the late 70's.)
>
> Is there a "standard" simplex emergency freq on 2m, 220, or 440?

Not that I am aware of, however if there is, it will be listed in
the ARRL Repeater Guide or similar publication.

Hi,

I recently got my Advanced license in the mail (upgraded from General).
It took about 9 weeks, which is guess is better than average these days.

BUT, I was disappointed to find that I didn't get a new call sign.
It's still the old (and crummy) N1OWU (say it three times). I'm certain
that I checked the box for a new call, since I didn't like this one.
Has the FCC changed their policy about issuing new call signs for upgrades?

>
>

Maybe if the Hams would have cross placed Info on the piece of crap Electronic Privacy Act bill it would have helped defeat it. Just remember Congress views themselves as the only source of common sense in this country. This means everyone including you are incapable of making logic decisions on your own. I know this making a big generalarization but, every time I read about congressional legislation it regards banning some item from the people.

Besides being a competetion shooter I do not believe my 8 shot M1 Garand (which is on the ban list) is an assault rifle. In fact, I have not heard of any Ghetto shoot outs involving them at all. However, I have seen and heard of Ham Radio equipment being used by drug dealers to avoid detection and capture by law enforcement officals. Just think about this as food for thought, your local congressman finds out a FEDERALLY Licensed program (namely Ham Radio) is aiding and abetting nasty criminal activity (suppling ham equipment through dealers without a 5 day waiting period). It's an election year, and crime reduction is the current rage amongst the Politicians, legislation involving the mandatory background check plus 5 day waiting period to purchase all Ham equipment could become a reality. Additionally, since most forms of digital communications are not readily "monitorable" by local law enforcement a strict ban of these forms of communication would be enacted.

I'm going to be visiting San Francisco in the next couple of days, and I would like to get the control tower frequencies for the San Francisco International Airport. Unfortunately I don't have the "Police Calls" book for the Western USA, and I can't pick one up at the local Radio Shack (I live in Alabama).

If someone out there happens to have these frequencies, I'd sure appreciate it if you'd e-mail them to me. I'm taking my HT, and since I'll be staying close to the airport, I'd like to tune in while I'm there and listen to what's going on.

Thanks in advance.

Relax Matt...

This came up a few weeks ago too. Don't lose any sleep over it.

Heck, a couple months ago, some guy's wife got on our repeater just before a net was supposed to start to announce that her husband was sick and someone else needed to take the net. (He was in that hospital, she was at home, unlicensed, etc, etc...) So one of the others jumped in and took the net. Nobody said anything about it and I thought it was pretty cool.

You did good.

Source record: 267518
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.amateur.misc

I saved a few $$. Currently using a Ten Tec Omni-V and looking
for an upgrade to a new rig. {I don't hear anything about a new
OMNI-7 ?? did anyone pick up on any rumors at Dayton ?}

What do you recommend for HF PacTOR ? something that will grow
with new PacTOR modes (PSK ?), run 300 baud G-TOR and have sufficient
audio bandpass,filters selection etc ?.

I see that only the Yaesu has a "RTTY" and "Packet" connector on
the back of the rig. But since most of PacTOR is/will be LSB and
not use the FSK capabilities of the rig - is there an advantage ?

Any suggestions welcomed.

TNX,

>currently on HF)?

Without question, the ARRL tapes are the best. I bought some others
(e.g., Ameco) but they were terrible both in production quality and
in terms of the presentation. The ARRL tapes really work. Ten or 15
minutes a day and you'll be moving right along.

I started with the ARRL Into to the Morse code tape about Christmas,
worked thru that and the 5 to 10 WPM tapes next and took my 5 wpm and
13 wpm tests in Feb. Frankly, I think it was a fluke that I passed
13 then, but I have been continuing to practice with the tapes (I'm
finishing up the 10 to 15 WPM tapes now) and certainly, that same 13
wpm test today would be trivial.

Obviously, as they say about mutual funds, past performance is no
guarantee of the future, but my sense of how it's going is that if
I continue the same way, practicing a little bit here and there as
I have time, 20 wpm should be attainable by around the fall.

In article <2q8tu2$bu8@dartvax.dartmouth.edu> Kenneth.E.Harker@Dartmouth.Edu (Kenneth E. Harker) writes:

I may be going to the Rochester, NH hamfest this weekend.
However, I just took another look at the New England hamfest list, and
I see the note that says:

$20@9AM $5@3PM

Admission is $20 Friday until 3pm, and $5 thereafter. Either way it's
good for both days, so unless you want to be there earlier on Friday,
$5 will get you everything. It's meant to bag mostly sellers, but
also anyone wanting an early look at the goods; most people will go
for Friday evening and Saturday for a single $5 entry fee.

Anyone know if this means entry fee to get in and buy, or a seller's
fee? If it's going to cost me $20 just to get in and look around (plus
$10 in gas to get there and back), I'm not going. I can't afford to
buy much of anything anyway...

See you there (if I can get away :-( )

Your rejoinder, though misguided and sad, at least was marginally
creative. Your signature-quote, however, is sickening. Next time
you'll probably entertain us all with some dead-baby jokes.

One of the great aspects of amateur radio is that it reflects a
cross-section of society...one of the lesser aspects is that we all
get to see that reflection clearly on a regular basis, and there are
occasionally more pimples than we'd like to see.

Gregory Brown WB0RTK

1619. International Callsign

Newsgroup: rec.radio.amateur.misc

Kenneth E. Harker (Kenneth.E.Harker@Dartmouth.Edu) wrote:

: I may be going to the Rochester, NH hamfest this weekend.
: However, I just took another look at the New England hamfest list, and
: I see the note that says:

: $20@9AM $5@3PM

It means it costs $20 to get in at 9AM Friday. If you can wait till
3 PM, it only costs $5 to get in. Thus, if you want a good spot to
sell stuff, you might spend the extra $$$. This is a *traders*
hamfest--no extra charge to tailgate. BTW, there are still people
bringing stuff to sell 10 AM Saturday morning.

: Anyone know if this means entry fee to get in and buy, or a seller's
: fee? If it's going to cost me $20 just to get in and look around (plus
: $10 in gas to get there and back), I'm not going. I can't afford to
: buy much of anything anyway...

Last year my wife and I took a Carribean vruis on a new ship
which was only out 1 year. During one of the infrequent bridge
tours, I asked the captain if he would show me the radio
room, and could I operate there.
He started laughing, and motioned me over to a desk in one
corner of the bridge. "This is our radio room" he said. It was
3 satellite/TTY sets, an IMARSAT phone, and a cell phone for
harbor chats. In one corner was what he called the sideband radio.
It was turned on, to some low HF frequency. There were some
pushbutton channel selectors, about 8. But no VFO. SO, I
thanked him and left. They had never used the SSB set, but had
it there for emergencies. I whiled away my time listening to
cuban taxi drivers on my 2m HT. (felt right at home in NYC).

73 TU SU DE NA4G BOB AR

Greetings CWISTS and Boatanchorites:

I will be on again at 0400UTC for the continuing saga of the Sacred and
Most Honorable Friendly Society of Brass Pounding Fist Functioning CWISTS.

Standard time: Friday Nights at 0400UTC

Standard freq: 80 meters --- 3702.5 khz for Novices and SlowSpeeds, et al.
3527.5 khz for Generals and Advanced, et al.
3517.5 khz for Extras and Europeans, et al.

40 meters --- 7102.5 khz (between the heterodynes)
7027.5 khz for Generals and Advanced, et al.
7017.5 khz for Extras and Europeans, et al.

The interest for this weekly function continues to grow. There have
even been some interested Europeans asking about it.

Let us all work together to continue to advance and promote the friendly
use of CW on the amateur radio bands.

Let us continue to assist and help the newcomers and slowspeeds who
are trying to get their CW going.

Let us to continue to promote the use of whatever gear you have up
and available, be it the newest of sorts or the oldest boatanchor.
Remember, CW generation has not changed since the days of arcs,
Alexanderson alternators, and Pliotrons.

Let us continue to promote the sharing and fellowship of the history
and traditions of amateur radio (this includes all you OTs out there
that have all sorts of goodly tidbits of history to relate to the young
squirts on the block, and it includes all you young squirts on the block
who, even though a bit new at CW and radio are the future of the service
hobby or profession).

Let us continue to promote the ``elmering'' of all of our new folks
by the old timers aboard, in any way that we can.

So, OTs aboard, young squirts in the wings, high-speed afficionados of
the art, and slow-speed ragchewers, join in on the fun. If your
equipment is old boatanchor, so what. If your signal is a bit weak or
chirpy, so what. If your antenna is just a mere piece of wire up into
the trees, so what. YOU can still join in and participate.
YOU are the folks who will make it what it can be, a goodly learning
time and an enjoyable evening for all.

See You There OM/YL.....

1629. GB2RS News 8th May 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-05 18:53:43 UTC
From: dave@llondel.demon.co.uk
Message-ID: <768189223snx@llondel.demon.co.uk>
Source record: 267428
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 8th of May and here is the GB2RS news broadcast, prepared by the Radio Society of Great Britain.

And we start this week with news of a dedicated group from North Wales and the Wirral who have been awarded a prestigious award for outstanding services to amateur radio in the Republic of Ireland. Tony Jones, GW4VEQ; Martin Vernon, GW6HVA and Dave Fernant, G4PGO were awarded the Pat Conway Memorial Cup for designing and building a packet radio mail link. The new link allows amateurs all over Ireland to connect into the European and Worldwide packet radio networks through the Isle of Anglesey, the North Wales coast and Merseyside. The award was presented by the President of the Irish Radio Transmitters Society Jim Ryan, EI3DP at the IRTS Annual General Meeting in Donegal. This is the first time that this special award has ever been made to non Irish Nationals.

The Arfon Repeater Group has reported a fault in the link between GB3AR and GB3AN. The fault is not apparent to users of GB3AN as the repeater will initiate the link, but since the audio is not heard on GB3AR, no contact would be made. The Group apologises for any inconvenience this may cause and hopes to rectify the problem shortly.

The Bracknell 70 centimetre repeater GB3BN, became operational again on Saturday the 30th of April. The repeater is located north of Bracknell in Berkshire and operates on channel RB0, which has its output on 433.0MHz and input on 434.6MHz. Further details and/or reports should go to the repeater keeper G4DDN, whose address is correct in the RSGB Call Book.

Two-metre repeater GB3KN, was scheduled to be switched on last Friday the 6th of May following a site change. The repeater is located north east of Maidstone in Kent and operates on channel R4, which has its output on 145.7MHz and input on 145.1MHz. Reports should go to the repeater keeper G3YCN, whose address is correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From East Kiribati, JA1WPX will sign T32WP from now until next Tuesday the 10th of May. Activity will be all bands using CW and SSB, but with emphasis on 17 and 30 metres CW.

From French Polynesia, N6VO will sign FO5VO on Tahiti, from tomorrow, Monday the 9th for several weeks. Activity will be mainly CW on 80 to 10 metres.

And from Market Reef, a group of operators will sign OJ0/Own-call from either Saturday the 15th or Sunday the 16th, depending on the weather, for three days. Operation will be on all bands, CW, SSB with some RTTY.

Now the events for today Sunday the 8th of May:

The Midland Amateur Radio Society, Drayton Mobile Radio Rally is being held at Drayton Manor Park, Tamworth, Staffordshire, situated off the A4091 road. Doors open 10.30am. The event features trade stands, club stands, a flea market and a car boot area.

The Yeovil QRP Convention is being held at the Preston Centre, Yeovil. Doors open at 9am. The event features traders orientated towards QRP, kits, components etc. Also features a club bring and buy stall, QRP station demonstrations, displays of home built rigs and vintage communication equipment. And there are talks covering propagation, construction and RSGB matters. Talk-in will be on channel S22 by GB2LOW.

Next the two events we know of for next Sunday the 15th of May:

The Dunstable Downs Radio Club 11th Annual National Amateur Radio Car Boot Sale is to be held at Stockwood County Park, Luton, Bedfordshire, located near junction 10 of the M1 motorway. Doors open at 10am. The event features trade stands, club stands and a car boot area. Other attractions include admission to the Environmental Open Day, free entry to the Mossman Collection of Horse Drawn Vehicles, craft museum and carriage rides. Details are available by telephoning 0582 451057 but please phone only between 6 and 8pm.

The Mid-Ulster Amateur Radio Club Parkanaur Rally is to be held at the Silverwood Hotel, Lurgan, County Armagh. Doors open at 12 noon. The event features trade stands, a bring and buy stall and an RSGB Book stand. Refreshments will be available. Talk-in is on two metres, channel S22. For further details contact Bill, GI7BQH on 0693 61298.

HF contest news now:

The fifth in this year's series of RSGB QRS (Slow Morse) Cumulative Contests will take place tomorrow Monday the 9th from 1900 to 2030 UTC between 3.54 and 3.58MHz. See April RadCom page 8, for further details and January's RadCom, page 83 for the rules. Novice licensees are particularly encouraged to participate as contacts with Novice calls are worth quadruple points.

The CQ-M Mixed Mode (Russian) Contest takes place during next weekend, starting at 2100 on Saturday the 14th and finishing at 2100 on Sunday the 15th of May. The contest uses CW and SSB on all bands from 1.8MHz to 28MHz but excluding the WARC bands. May RadCom page 20 gives some rules and entry details.

Next some VHF contest news:

The RSGB 432MHz to 24GHz Contest will finish today Sunday the 8th at 1400 UTC. See February RadCom, page 83 for further details.

The RSGB 144MHz Single, Others and SWL Contest takes place from 1400 UTC on Saturday the 21st until 1400 UTC on Sunday the 22nd of May. There are four sections, Single operator fixed, Single operator Portable, Others and Listeners. Another category is Single operator fixed, operating for 6 hours continuously, but starting at any hour on the hour. See the February edition of RadCom for further details.

The first of the RSGB Back-Packers 144MHz Contests is scheduled to take place from 1100 until 1500 UTC on Sunday the 22nd of May. This is a new type of contest and full details can be found in January's RadCom.

Special event stations active in May include:

GB0CT, Channel Tunnel, will be aired by members of the British Rail Amateur Radio Society from New Romney Railway Station, near Folkestone, Kent. At the same time TM5TSM, will be operational from Wimereux Town Hall near Boulogne. Both stations will be operational until today, Sunday the 8th of May, on 80, 40, 20 and 2 metre and 70 centimetre bands.

GB2PW will be operated today, Sunday the 8th, by members of the Southdown Amateur Radio Society from Polegate Windmill. This celebrates Windmills Day.

GB0SND, Special Needs Activities, will be operated by members of the Havering and District Amateur Radio Club from the Hargreaves Campsite, Little Heath, Romford. The occasion is the Ilford East Scouts Special Activities day for physical and mentally handicapped members during today Sunday the 8th, from locator JO01BN, WAB Square TQ48.

Next Saturday, the 14th, members of the Barking Radio and Electronics Society will operate GB2WBD and GB4WBD to commemorate the twinning of Witten in Germany with Barking and Dagenham. Operation will be on HF, VHF and on packet.

And now the solar factual data

The period from the 25th of April to the 1st of May saw enhanced conditions on the HF bands up to the 1st of May. Then, as forecast, a magnetic storm occurred, seriously affecting the higher latitudes. Only one very small flare was reported on the 28th - a B3.9. The spot indices tended to rise over the period with the mean being 48. The solar flux levels declined slightly from 83 units on the 25th down to 75 units on 1st May, with the period averaging 78 units. There has been a rapid general decline in solar flux levels since last December, when the mean levels were about 100, down to present levels about 80 units. The 90 day flux mean on April 27th was 91.

The geomagnetic Ap indices were quiet for most of the period, with the 30th of April being very quiet with an Ap index of only 2 and with HF band conditions being excellent. It had all the indications of a pre-auroral enhancement. The 1st of May saw a magnetic storm commence, taking levels up to 34 units. The period averaged an Ap of 8.8 units. The X-Ray flux is only slowly recovering from the collapse at the end of

March; the period averaged A4.6 units, but varied considerably day to day. The state has been 'nil nothing to report' throughout the period. The aa indices, as supplied by the British Geological Survey for the period 19th to 25th April, were very quiet giving daily averages of only 17.7 nanoTeslas, about K2, with many periods of only 8 nanoTeslas.

I'll repeat the figures. Spots - 48; Flux - 78; Ap index - 8.8; X-ray flux - A4.6.

Now the ionospheric data for Central France:

Due to the holiday we have data only for the 25th to the 28th. The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 7.4MHz. The darkness hour lows averaged 3.4MHz.

I'll repeat the figures. Highs - 7.4MHz; lows - 3.4MHz.

Now the ionospheric data for the north:

During the period of available data, the F2 daytime critical frequencies at Ekaterinberg were about 6.9MHz, and the darkness hour lows about 4.5MHz.

I'll repeat the figures: Highs - 6.9MHz; lows - 4.5MHz.

And lastly the solar forecast:

This week, the quieter side of the sun will be looking our way, solar flux levels are expected to be at about the 80s. The geomagnetic levels are expected to be just unsettled. Ionospheric MUFs for north/south paths in the south are expected to be about 24MHz during daylight, and 14MHz for the darkness hours. East/west paths will be well down on these levels due to the seasonal changes now taking effect. Northern stations may be affected by the passage of a coronal hole on the 13th and 14th, but HF conditions are expected to be generally better than of late.

And that is the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Victor and G7 Sierra India series, and Novice calls in the 2 0 Alpha Hotel and 2 1 Charlie Yankee series.

GB2RS, the news broadcasting service of the Radio Society of Great Britain, is transmitted in the 80, 40, 6 and 2 metre bands.

The 28A (Monoband tx) uses the same batts and I've been fairly happy
with the supplied batt-pack. I did buy the BT-8 too. What I've been
wondering is what happens to the alkaline batteries if you plug in
the wall charger, or 12Vdc adaptor - surely it wouldn't try to
recharge the alks!? BTW Kenwood says DO NOT turn the radio on, much less
transmit when charging the NiCads with the supplied charger. Their
reason was the charger is not regulated...oh well...

1633. 2 meter lingo publication

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-05 19:15:10 UTC
From: md@maxcy2.maxcy.brown.edu
Message-ID: <1994May5.191510.27823@cs.brown.edu>
Source record: 267434

I'm currently working on a publication entitled "The 2-meter Lingo Guide: A Handbook For The New Ham". I'm looking for various statements and their definitions that the new ham can expect to hear on 2 meters, thus allowing themselves to assimilate easier into the 2 meter culture. For example:

"We'll catch ya later down the coax"
"Forty-Rodgoes on that"
"We'll pass you our very best of seventy-threes"
"[CALLSIGN] For ID"
"Don't get me wrong, I really like the code, but... wouldn't you rather hear their voice?"

Naturally, be sure to include a translation as to what the term is really supposed to mean, as if you were speaking normal English over the telephone.

Don't think for a minute that the role of ham radio in the coup
attempt in Russia was lost on those who are working to restrict
our individual freedoms in order to advance their collectivist
agenda. This may not be strictly on topic, but at the same time
we ignore the current trend at our peril. Remember, one of the
early moves Hitler (who was ELECTED to power, by the way) and
Stalin did to consolidate power and stifle opposition was to ban
ham radio!

That's not a diplexer schematic in the previous post. It's essentially a VHF / UHF splitter, which is really just hi pass and lo pass filters in the same box. Diplexers use exotic things like cavities and magic T's. What? You've never heard of a magic T?

Dear MD,

I do have a sense of humor, and a fine one at that. It just doesn't
happen to extend to assault weapons and killing baby seals. Does
yours?

I'm just a naive new ham who doesn't even have a rig yet, and only know
what I've read in the books - but -
I thought lingo like you just described wasn't supposed to occur on voice
transmissions. I thought you really were supposed to "speak normal English".

Congratulations! Now that the bug has bitten, you'd better sent for the International Callbook. I don't believe there is a computer look-up service for the international calls yet. Ordering info can be found in any QST Magazine. You could also use the ARRL Outgoing QSL service. It takes more time to get a card, but the cost right especially if you make lots of contacts.

Good luck!

>
> (arranging someone else to handel them and such)

Ron Vincent WJ7R, visited with Jerry AA6BB the other day.

He told me that Jerry is obviously very bereaved over Joannie's passing but has not put anything aside because of it.

The labels are all printed for the 3Y0PI cards. The cards themselves were supposed to arrive on April 27th. They did not.

Jerry has apparently said that as soon as the cards come in from the printer, the labels will be affixed and ALL cards will be out within a week of their arrival!

Our local DX group has offered to help with the process but we were told that it's not needed 'cause everything is under control.

We will, however, be working on sorting Joannie's remaining bureau cards for all the other stations she manages.

If you find a definition for "destinated," please include it.
My American Heritage dictionary doesn't show it, although I think
Webster's New Collegiate said it meant something to the effect of
"having met your destiny."

If you had read the column, _without prejudice_, you would have seen that it is a critizism of the throw back attitude the new pirates, or micro broadcasters, have. It puts Dunifer and his followers into the same bag as the Chicago Seven and in no way promoted illegal radio.

The suggestion I made had to do with telling them to go screw their court battles to force the FCC to set up or reinstate a LEGAL class of license because no one in power is going to listen to, "It's My Right", radicals. It openly suggested legitimate groups that would have a political influence and that could lobby for a real broadcast license or class of low power license, (class D), to be reinstated.

I am familiar with the regulations for both amateur radio and the internet,
and they seem to be quite similar in theory. We internet types don't see
most of the regulations, of course, because the technical end is handled
by our sysops. Amateur radio operators have to do everything for themselves,
and thus have to be familiar with all of the regulations. This may be
the source of much confusion in comparisons between the two.

And what, exactly, is the favor amateur radio is getting from the feds?
Being allowed to operate on a restricted list of frequencies at a restricted
power level, with restrictions on what they can broadcast, all assuming they
have an official license? This is not a favor, any more than allowing
citizens to own a restricted list of weapons, of restricted 'power', with
restrictions on use and carry, again assuming one has an official license,
would be a `favor' to gun owners. It bothers me that a segment of the
amateur radio community feels otherwise. Fortunately, most of the amateur
operators I know do not feel this way.

Let's lighten up, guys. There are enough anal retentives already.
If your newsreader shows the heading of an article that obviously
doesn't belong, just say 'n' (or whatever). In most newsreaders
positive action must be taken to see an article, so you asked
for it...

On the other hand, the writers of the Constitution protected firearm
ownership because placing power in the hands of citizens is the only
way to defend liberty. And placing effective communications in the
hands of ordinary citizens is another way to bypass Big Brother.

Just think of the AR-15 as a logical accessory for your
now-illegal assult scanner...

I'm looking for an article entitled "Sonobaby" or with the word
sonobaby in its title. All I know is that it was published in the ham
radio literature of the 1960's (before I was born!). I've done enough
searching to be fairly certain it wasn't in QST, but I haven't been
able to find indexes for CQ, 73, or Ham Radio magazines. It was about
converting the radio systems in surplus sonobuoys to VHF amateur use.
I happen to have three buoys, and although I've taken one apart, I
haven't the foggiest clue where to start in modifying it.
If anyone can help me find this article, or anything like it, I
would be very appreciative.

^^

Uh oh... Someone stated this same phrase on r.r.a.policy a few months ago
and a several-week thread resulted; hope that doesn't happen on here!

But, just in case a thread DOES result I'll add my two cents worth now:

In reading The Second please pay attention to the word `militia' and think
about what the militia was at the period of time it was written. The militia
consisted of the citizen-soldiers i.e., `the people'. The militia WAS
`the people'. Today the militia is no longer `the people' - rather
it is your state's national guard.

If you want to play with guns today then join the `militia' i.e.,
National Guard.

Summary: Then Now
---- ---
Militia: The People National Guard
****

Back to radio: Does anyone know if there is an international coordinating
body for 10M beacons? I've got one almost assembled, gotten the FCC's
blessing (I sent our Honolulu office a brief note about it), erected
the antenna (here on campus), awaiting the university's approval,
but need a frequency not in use by any other beacon worldwide. From
a list I've received of 85 worldwide beacons it appears that 28.203 kc
is open, but this list is dated 1990.

: to get licenses out, and that they have not yet gotten to the new 610's
: in their processing procedure.

Well, that's kindof right. In general (for anybody without my luck), you can expect your ticket in about 10 weeks. In my case, I found out (after calling the VEC at about 12 weeks) that one of my VE's did something or another and got his license revoked. My application was being "scrutinized." They didn't say that it wasn't the FCC that was scrutinizing, but some #@$$@%# attorneys that were doing it. Officially, my application was ok'ed and reached Gettysburg in 24 March. This means that I can expect my license, at earliest, over 5 months after taking the test. Now they (W5YI-VEC's manager) wrote that because I qualified for tech-plus I have to wait longer than 10-12 weeks. Does this mean that that "plus" after the tech equals a longer delay??? Hell if I know. But they said, "if you have not received your license by June 24, you may call the FCC at . . ." This will be officially six months and a day after receiving my CSCE. If I'm correct, the ARRL convention (and hamfest!) that is coming to Arlington (maybe 5 miles from where I live) will be over by then. BUMMER!!!!!!!!!!!!!!!!!!!!!!!!!!!!1

I'm frustruated and pissed, but there is nothing I can do. Somebody emailed me and told me not to write my congressman because I'm "lucky not to have to retake the test." I'd probably have given up on ham radio if I hadn't alredy gotten a HT. Ok, so maybe that's a little exaggeration, but I *am*, at week 19, pretty upset!!!

End of sob story. The synopsis: expect license in 10-12 weeks from CSCE, unless something goes "wrong."

: wondering is what happens to the alkaline batteries if you plug in
: the wall charger, or 12Vdc adaptor - surely it wouldn't try to
: recharge the alks!? BTW Kenwood says DO NOT turn the radio on, much less

well. . .let's just say that somebody's girlfriend plugged the ac adapter into the charge (instead of into the dc jack) jack when his pro-43 was loaded with energizers. Well, he got battery "acid" (base) all inside the radio, and said that some stenciling was gone, and the circuit board discolored. How would you propose the battery pack know whether it was loaded with nicads or alkalines??? The adapter just serves to provide current!

On Thu, 05 May 94 15:15:59 EDT, strange alien beings caused Jim Grubs, W8GRT (jgrubs@voxbox.norden1.com) to write:

> hoagy@illuminati.io.com (Sir Hoagy) writes:

> > Since I was unlicensed, was it illegal for me to use my radio
> > on an amateur frequency for this situation?
> >
> > I'm telling myself "No, since it was a valid emergency". However,
> > I dunno. Would someone help me with this one? I'm still wondering
> > if I was right/wrong.
>
> Threat to human life or safety? YOU BET IT WAS O.K.!!!! Don't
> let anybody talk you out of it.

To cite the relevant part of the FCC regs (97.403 is also relevant, but this is clearer):

97.405 Station in Distress

(a) No provision of these rules prevents the use by an amateur station in distress of any means at its disposal to attract attention, make known its location and situation, and obtain assistance.

(b) No provision of these rules prevents the use by an amateur station, in the exceptional circumstances described in paragraph (a) of this section, of any means at its disposal to assist a station in distress.

So, you have nothing to worry about.

/Matthew

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 5/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 5 MAY AND FORECAST UP TO 8 MAY

IPS Warning 12 was issued on 25 APR and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 073/009

1B. SOLAR FORECAST
06 May 07 May 08 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 072/008

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 4 May
Learmonth 19 334- ----
Fredericksburg 25 20
Planetary 30 23

Observed Kp for 4 May: 4543 4433

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 May 22 Unsettled to active.
07 May 20 Unsettled to active.
08 May 20 Unsettled to active.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
05 May normal normal fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 May normal fair poor
07 May normal fair poor
08 May normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near normal, with spread F 10-20UT and a 30%
depression 15-17UT.

Observed T index for 05 May: 16

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
06 May 20 Near predicted monthly values.
07 May 25 Near predicted monthly values.
08 May 25 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

1659. Looking for Icom 551 Opinions & Sellers

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 01:15:37 UTC
From: adam@panix.com
Message-ID: <2qc5np$8rl@panix.com>
Source record: 267470
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap

I am looking for:

1) Comments about the Icom 551 6M multimode from people who have experience with that radio. I know very little about it. Is the transmitter clean? What about receiver sensitvity and selectivity? (I want it primarily for use at a multiop contest station which is running pretty fair power on other bands. I thus want a receiver that hears well but won't get trashed and I want a transmitter that won't trash the other bands). Is it reliable? Is the firmware going to disappear when the lithium battery goes dead? I assume that it is capable of FM, for both simplex and repater use. Are there option boards to look for (filters, CTCSS, etc)? Does it come in high and low power models (A & H)? What kind of power output can I expect? Is it adjustable? Is there else anything I should know about it before buying one? What is the going price for a 551 in good condition?

2) Somebody who has a 551 to sell (presuming that I hear the right answers to the above questions).

-Thanx

1660. Re: digital speech transmission for HAMs?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 02:01:00 UTC
From: im@hydra.carleton.CA
Message-ID: <CpCyxo.9B2@cunews.carleton.ca>
Source record: 267471

Digital speach in the same bandwidth as an FM voice carrier is
not a problem with todays technology. (even yesterdays technology).

CVSD at 9.6 kbps is "not to bad" for male voices, if you prefilter
down to an appropriate bandwidth before sampling. Motorola has
a chipset to do CVSD ... just put in audio, and clock, and
out come bits. Some will say 9.6 CVSD sounds horrible, but then
so does SSB. 32 kbps CVSD can pass as nearly toll quality if the
channel error rate is low. With CVSD you also get a bonus of a
system that is fairly tolerant of bit errors.

LD-CELP at 16 kbps is the newest "toll quality" standard from
the ITU. It needs serious DSP, but it is as good as (or better
than according to some) sounding than 64 kbps PCM. Not sure if
there is a hardware solution to do this yet, but the algorithm
should be available from the ITU.

ADPCM standard is 32 kbps, but you can prefilter and lower the
sampleing rate and use it down to 9.6 kbps. At 9.6 kbps it still
sounds like normal voice and you can usually recognize the speaker,
and again if you're a male it's not to bad.

Then theres really low bit rate voice stuff, LPC, GSM and
others. Voice in down to 2400 bps. Now at 2400 bps everyone
sounds like an poor voice synthesizer but if moving voice
is what you want to do it works. If you're trying to get
broadcast quality audio program material down it you're
out of luck. At 4800 bps things get a little better, and
you may recognize the speakers voice if you know who it is.

Digital voice is something that more hams should be playing with.
(wish I had time to play more). With a sound blaster as an
input device, and a 9600 bps modem, digital voice would be
pretty cool!

im

Jargon translation:
CVSD: Continuously Variable Delta Modulation
PCM: Pulse Code Modulation
LD-CELP: Low Delay Code Excited Linear Predictive
ADPCM: Adaptive Delta PCM
LPC: Linear Predictive Coding

In article <CpDsKL.90F@freenet.carleton.ca>, Russ Renaud (ae517@FreeNet.Carleton.CA) writes:

>Our cousins to the south pay less than $6.00 U.S. for a license that's
>good for 10 YEARS!!!!

Actually, we don't pay anything for our licenses here; the under-$6 fee is charged by the VECs (the organizations giving the tests) to cover handling costs for the paperwork. And some VECs don't charge anything at all. The FCC doesn't get a cent for ham licenses at this point.

There is a proposal for "vanity" calls, which would cost $7 a year (actually $70 up front for the 10-year license), but that's not in effect yet.

--- SOLAR TERRESTRIAL FORECAST AND REVIEW ---
May 06 to May 15, 1994

Report Released by Solar Terrestrial Dispatch
P.O. Box 357, Stirling, Alberta, Canada
T0K 2E0
Accessible BBS System: (403) 756-3008
SKYCOM Announcement: (403) 756-2386

SKYCOM Version 1.0b has been released. This is an enhanced version of the powerful High Frequency Ionospheric Signal Analyst software package.

Version 1.0b permits you to define a dictionary of locations or cities or "zones" of unlimited size. Select transmitter and receiver locations simply by typing the name of the sites or by displaying the defined sites on a VGA-quality map (with the sunrise/sunset terminator grayline, location of the overhead Sun, and locations of the critically influential auroral zones and more, all superimposed on the map) and selecting the desired locations with your mouse. Instantly determine distances between any two geographical locations. Define your own colors for SKYCOM's menus and prompts, and more. Numerous additional algorithmic enhancements have also been incorporated into this revision.

Produce VGA-quality global "snap-shots" of the state of the ionosphere (maps of maximum usable frequencies for variable distances, maps of critical F2-layer frequencies, maps of the height of maximum electron density, maps of solar zenith [or elevation] angles, maps of the magnetic field of the Earth, and much more). Ray trace signals through one of two realistic (IRI) models of the ionosphere. Handle up to 99 user-defined regions of sporadic-E. Generate broadcast coverage maps of signal quality, signal multipathing, ionospheric focusing/defocusing of rays, and more. Rigorously compute maximum usable frequencies between any two geographical points using actual ray-tracing results.

SKYCOM produces high-precision results and handles practically every type of geophysical disturbance that can affect radio communications, from solar flares to geomagnetic storms to devastating polar cap absorption to sporadic-E and more. SKYCOM is a serious and user-friendly software product for serious communicators.

For more information, call the recorded SKYCOM announcement (approx 3 minutes) listed above or send e-mail to: Oler@Ultrix.Uleth.CA. This is a software package no radio communicator or listener should be without.

NOTES:
These VHF DX prediction charts are defined for the 30 MHz to 220 MHz bands. They are based primarily on phenomena which can affect VHF DX propagation globally. They should be used only as a guide to potential DX conditions on VHF bands. Latitudinal boundaries are the same as those for the HF predictions charts.

Message-ID: <CpD0tC.8Hy@srgenprp.sr.hp.com>
Source record: 267472

John E. Lundgren (jlundgr@eis.calstate.edu) wrote:
: That's not a diplexer schematic in the previous post. It's essentially a
: VHF / UHF splitter, which is really just hi pass and lo pass filters in
: the same box. Diplexers use exotic things like cavities and magic T's.
: What? You've never heard of a magic T?

The vocabulary used by 2-way radio folks uses the word "duplexers"
for the multi-cavity resonators used on repeaters. The word "diplexer" is
reserved for a device that combines two wider-spaced frequency bands, as
per the schematic in the previous post.

>that I checked the box for a new call, since I didn't like this one.
>Has the FCC changed their policy about issuing new call signs for upgrades?
>

No -- perhaps you didn't check the box after all, or perhaps the folks
in Gettysburg missed it. No big deal; you can still fill out and send
in another 610 requesting a new call sign. You'll get a 2x2 Advanced
callsign back in the same 8-10 weeks.

The International Callbook is one source. The Buckmaster CD-ROM is another, if the April '94 edition has Argentina (the Oct. 93 one doesn't). He may also have a QSL manager. And the slow way is through the ARRL Outgoing QSL Bureau, if you're an ARRL member.

Congrats on the first DX!

Now TWICE the number of outdoor Tailgate spaces are available...

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS

FLEA all SUMMER at MIT
May 15th, 1994
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

NOTE: The Effective Sunspot Number for 04 MAY 94 was 25.5.
The Full Kp Indices for 04 MAY 94 are: 4o 5- 4- 3+ 4- 4o 3o 3o
The 3-Hr Ap Indices for 04 MAY 94 are: 30 43 24 19 22 30 15 16
Greater than 2 MeV Electron Fluence for 05 MAY is: 1.4E+09

SYNOPSIS OF ACTIVITY

Solar activity was very low. No events were observed.
Region 7714 (S14W05) is the only spotted region and is growing
slowly.

Solar activity forecast: solar activity is expected to be
very low.

The geomagnetic field ranged from unsettled to storm
levels - minor storm at middle latitudes and major storm at
high latitudes.

STD: Energetic electrons at greater than 2 MeV have remained at
high to very high levels today at geosynchronous altitudes.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly active during the day with storm
conditions possible at local nighttime. Activity levels should
slowly diminish over the forecast period.

Event probabilities 06 may-08 may

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 06 may-08 may

A. Middle Latitudes
Active 30/35/15
Minor Storm 15/15/05
Major-Severe Storm 05/05/05

B. High Latitudes
Active 30/40/15
Minor Storm 25/15/05
Major-Severe Storm 10/05/05

HF propagation conditions continued below-normal over the
high and polar latitudes. Very gradual improvements in
propagation conditions are expected over the next 72 hours,
although a return to near-normal conditions is not expected
until next week.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event

Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

1671. TM5TSM Chunnel opening ham callsign

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 10:01:05 UTC
From: elendir@enst.fr
Message-ID: <2qd4h1$96o@cismsun.univ-lyon1.fr>
Source record: 267380

Hi !

Today, the chunnel France-England is finally opened. To commemorate this
"historic event" (?) the special callsign TM5TSM has been granted for the
French side, while G0CT will be active in England.
Both callsigns are valid today and throughout the week-end.

Frequencies are as follow :

CW : 3.520 - 7.020 - 14.020 - 21 - 28.020 - 144.080 - 432.080
SSB: 3.660 - 7.060 - 14.270 - 21.270 - 28.670 - 144.230 - 432.230
FM : 145.450 - 433.500

A special quadricromic QSL card bearing the callsign of both stations will
be sent.

It was technically illegal, but I do believe there are provisions in the law
to accomodate 'good samaritan' actions. The guy out west who called for help
on his HT out-of-band had his radio confiscated, but i think it was returned.
I wouldn't worry - you did the _right_ thing.

Welcome to Amateur Radio - you are clearly a credit to the service.

73!

Oh boy! Nice to see all the DOC/Industry Canada people participating in this newsgroup. I guess it's about time to bring up my pet peeve.

Why is it that we have to pay so much for our station licences every year. Last year it was $23.00, this year it was $24.00. Where will it end? Where is all the money going? Is it to pay for your Internet access? <grin>

Our cousins to the south pay less than $6.00 U.S. for a license that's good for 10 YEARS!!!!

Couldn't we do something along the same lines up here? Perhaps DOC could charge extra for value-added services, like "vanity" callsigns, address changes, etc., and charge a lower rate for the basic licence.

Just a thought!

de va3rr (YES! a vanity call)

==========
I sent the original post for Ten-Tec's voice/fax numbers. Sent
two FAXes so far. Still no catalog. Bummer.

Guess I'll have to *call* them. Sigh. FAX is so much easier.

In article <1994May5.191510.27823@cs.brown.edu>, md@maxcy2.maxcy.brown.edu (Michael P. Deignan) writes:
|> I'm currently working on a publication entitled "The 2-meter Lingo
|> Guide: A Handbook For The New Ham". I'm looking for various
|> statements and their definitions that the new ham can expect to
|> hear on 2 meters, thus allowing themselves to assimilate easier into
|> the 2 meter culture. For example:
|>
|> "We'll catch ya later down the coax"
|> "Forty-Rodgoes on that"
|> "We'll pass you our very best of seventy-threes"
|> "[CALLSIGN] For ID"
|> "Don't get me wrong, I really like the code, but... wouldn't you
|> rather hear their voice?"
|>
|> Naturally, be sure to include a translation as to what the term is
|> really supposed to mean, as if you were speaking normal English over
|> the telephone.

Michael: I hate this type of lingo and am generally pleased it
is not too common on 2-meters. May I suggest that we discourage
it rather than document it. This isn't CB radio!

The fact that your writing a book on this lingo garbage is more evidence that the 2 meter band is lost forever.

"Forty-Rodgoes on that" - Give me a break!

What kind of garbage is this. The 2-meter band is turned into another CB wasteland. I just heard the other night a group of newly licensed no-clue techs hanging out on a simplex freq using all kinds of strange lingo, I have never heard in 28 years of operation. It when something like this:

N1FOO come on back ... Yeah N1FOO come on back ... Yeah QSL N1FOO this is N1BAR handle here is "Scorpio" and the personal here is Bill. Didn't we used to talk on CH 12? Yeah these new VHF FM rigs are really neat, but I wish we didn't have to go through the hassle of answering that application form to get a call sign. Oh, well atleast they gave us the anwsers to the questions... Well I have destinated, N1BAR over to N1FOO am going QRY...

All I can say is "73s to the 2-meter band"

: during my wanderings about the net.

: 73

: Ted
: -0-

: Email from Luck Hurder 17 April 1994 to W4MLE and WA4PUP:

: "Those of you who know me well will immediately understand why
: I couldn't possibly abide by what follows, but for the record,
: my final conversation with Rick Palm was to the effect that yes,
: I would in fact abide by everything contained therein, PROVIDED
: that each and every ARRL HQ employee be asked to sign a similar
: document. They declined. Rick's last words to ME were, `then you
: give me no alternative but to terminate your employment'.

: 73 - Luck Hurder KY1T"
: ----------------------

For brevity I did not include the rest of the text of the message.
However I have several questions?

1. Who is Rick Palm?

2. Do my dues go to pay his salary?

3. Can I get a refund?

Seriously, Rick Palm needs to be shown that his policies are not acceptable
to the people who pay his salary. I would like to no longer pay his salary.
How do I go about doing this and still stay in the league?

Geoff.

P.S. I am in Philadelphia Pa. if that helps.

1684. Re: digital speech transmission for HAMs?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 14:03:44 UTC
From: smasters@fame.gmu.edu
Message-ID: <2qdio0$g8b@portal.gmu.edu>
Source record: 267306

There are a few issues with digital voice for hams.

16Kbits/sec sounds pretty good with current technology. New
digital systems are getting acceptable sound over 8Kbits/sec. For those
of you who aren't familiar with them, the military has STU-III phones
that give voice capability at 2.4kbits/sec. Now the voice is only as
good as it will map to the model of the human vocal system in the phone.

A question that would have to be addressed would be coding.
Would it be a data stream that is transmitted when you push the button,
or would it be packets in a TDMA scheme? There are also legal issues
with some things like CDMA.

The other question is bandwidth. Now for US hams the FCC has
set a specific deviation for all digital codes. If we where to have a
minimum singal to noise ratio set, a maximum signaling rate could be
determined and modems designed. Another possibility is to use NBFM and
run an audio modulation into an HT or mobile rig. This way current RF
equipment will remain the same and all that will be needed is a digital
front end. Again repeat calculations and determine the level of service
to quality of sound trade-offs.

Good luck and 73,
Shawn KE4GHS

I've been following this discussion since it first popped up and several points occur to me.

First, yes, I do agree that ARRL management probably has been advised by counsel not to comment. Basically, the idea here is that they can't be sued for what they don't say.

That does not, however, mean I buy the argument that we should then assume there are important facts we don't know and that if only we did, then surely we'd concur with the ARRL management action. To me, that sounds a little too much like Nixon's Secret Plan. Let's be frank: these people work for us. That's why we pay dues. We have both a right and duty to see to it that the ARRL is managed well and fairly.

I can only try to judge the evidence I have in front of me. That evidence is that Luck Hurder was a consistently helpful, enthusiastic fellow who worked very hard.

Now, some have suggested that Luck may have been hard to manage, as if this might be the "real" reason he's been fired. Well, again, let me be frank: that's too bad. I don't care. His managers weren't being paid to enjoy life and surround themselves with a bunch of bootlickers. As most good managers will admit, virtually ALL really good employees -- the ones who can make a real positive difference in any organization -- are hard to manage. That's the job. Take it or leave it. If you just can't cope with that simple fact, you should not be a manager.

Ultimately, I don't give a damn how miserable Luck may/may not have made life for his managers. I do care how well the organization performs for all of us who are paying for it. And I do, sadly, suspect that dismissing Luck is not the way to make it work better.

Actually, we don't pay a thing for the license. The $5.xx goes for testing
fees. So, in theory, you can pay that once and have a license for life...

1688. FCC Still requires 1st Class License

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 15:27:16 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9405061527.AA01844@tix.timeplex.com>
Source record: 267395

I guess that for some in the commercial radio world the FCC still requires tha u hafta have a Radio Telegraph (commercial license). Follows a recent FCC Order.....

Report No. GN-155 GENERAL ACTION
May 3, 1994

JOSEPH SAWCHUCK DENIED CANCELLATION OR REDUCTION OF
FORFEITURE
FOR FAILING TO HAVE REQUIRED FIRST CLASS
RADIOTELEGRAPH OPERATOR'S CERTIFICATE

The FCC has upheld an action by the Field Operations Bureau and denied Joseph Sawchuck, IV,'s request for cancellation or reduction of a forfeiture issued in the amount of $5,000 for serving as the sole radio officer aboard a vessel in violation of the Communications Act. The Act requires two radio officers on board unless the radio officer has received a six month service endorsement to his First-Class Radiotelegraph Operator's Certificate.

Sawchuck served as sole radio officer aboard the vessel PATRIOT without a required Six Months Service Endorsement. Seeking review of the Bureau's assessment, Sawchuck argued that the Bureau had failed to adequately consider and apply the proper standard and downward adjustment criteria set forth in the Commission's Policy Statement, Standards for Assessing Forfeitures.

Denying review, the Commission stated that Sawchuck had failed to show that the Bureau erred in its findings of fact, or misapplied the law and its policy to the facts. The Commission said that all relevant facts were considered by the Bureau in reaching its finding of liability for monetary forfeiture. Also, the Commission found that the Bureau applied the correct standard in determining Sawchuck's liability for forfeiture under the Commission's Policy Statement, and all facts and circumstances applicable to each of the criteria set out in the Policy Statement.

Action by the Commission April 12, 1994, by Memorandum Opinion and Order (FCC 94-87). Chairman Hundt, Commissioners Quello and Barrett.

>I dunno. Would someone help me with this one? I'm still wondering
>if I was right/wrong. I *do* plan to let the person who answered
>my call that it was me when...IF my ticket gets here tomorrow,
>just in time for THursday night network.
>
==========
I seem to remember (don't have any reference handy, maybe someone else
can provide) in the rules that in an emergency, you can transmit on any
frequency (even out of your license class bands) to call assistance.
Since you have no license (at the moment), everything is out of
your license class! :-). I used the Gordon West study guide for the
Technician class, and recall the phrase "...in an emergency, ANYTHING GOES!".

I think you're in the clear. I know if I was injured in that accident,
I'd appreciate the hell out of what you did.

No, it was NOT technically illegal! The Communications Act
specifically states <paraphrased> that in the event of threats
to human health or safety or desctruction of property anything
reasonable goes.

MI>prices but I'd say that half of list would be a decent jump-off
MI>point.

MI>1 Icom 6 meter all mode transceiver
MI>2 NCR 12VDC 10 amp Power Supplies

MI>Will trade for IBM clone stuff; looking for RAM SIMMS...

Let your friend knwo that I am interested in the above items,
and have the following to trade:

HARDWARE FOR SALE
~~~~~~~~~~~~~~~~~
FLOPPY DISKETTES (all are pre-formatted MS-DOS)
~~~~~~
720K 3" ------- 50 diskettes - $20.00
1.44M 3" (720K punched out and formatted 1.44M) - $20.00 for 50
360K 5" ------- 50 diskettes - $5.00

DTK XT - 640K RAM, two 360K floppies, Western Digital hard disk
controller, 40 MEG hard disk, 98 key extended keyboard,
Citizen Premiere 35 daisywheel wide carriage printer and
printer cable - $200.00 plus shipping

OTHER STUFF!
~~~~~~~~~~~~
Genuine IBM PC/XT keyboard w/83 keys, plexi dust cover... $35.00

Texas Instruments Appletalk/RS-232 port for microLaser... $50.00
Texas Instruments new developer cartridge for microLaser.. $95.00
Texas Instruments new OPC cartridge (drum)for microLaser..$110.00

AST 4-port serial card - NEW, w/4 socketed 16550 UARTS... $100.00
Practical Peripherals Microbuffer In-Line w/256K RAM.... $100.00
RS232 Gender Changer Male/Male..... $10.00
Kensington Universal Printer Stand..... $10.00
2 Electricord XP 6 outlet strip surge protectors (new)..ea $10.00
Compaq portable floppy control/printer port - excellent... $25.00
Chatsworth Data mark sense card reader w/serial cable.... $150.00
Calltext 5000 text to speech converter & telephone communications
board - currently sells for $3200 ----sale!..... $150.00

NS16450N UARTS ---- $5.00 each
NS16550AFN UARTS -- $15.00 each

4 - 256K-70ns 3-chip SIMMs - $10.00 each or $35.00 for all
~~~~~~~~~~~~

4 - CY7C185-25PC (8Kx8) static RAM, 25 ns. - $5.00 each

63 pcs - 4164 - 120 ns DRAMs - $.50 each or $30.00 for all
6 pcs - 41256 - 70 ns DRAMS - $1.25 each or $7.00 for all
2764 EPROMs - $2.50 each

Magnatech 16mm recorder/reproducer - can be modified to 35mm.
comes in large Anvil case on wheels.....$1500.00

KLOSS Video projector & screen - 6&#65533;" foot diagonal screen,
rebuilt projection tubes, will sell in Southern CA area
only, since it is too large to ship by UPS!.....$1150.00

Above prices do not include shipping. If interested, leave
message here or call.

1693. FT-530 AM Mode on 800 Band Possible?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 16:32:33 UTC
From: ken@boxhill.com
Message-ID: <2qdrf1$490@boxhill.com>
Source record: 267414

Can other owners confirm the following limitations of the
AM mode on the FT-530?

VFO Band AM Possible?
----- ------ ------------
Left 2m Yes
Left 70cm Yes
Left 800Mhz No (neither AM nor FM. Not tunable)
Right 2m No
Right 70cm No
Right 800Mhz No (FM Only)

I ran across this limitation of the right-hand VFO when
trying to listen on the 800 Band in AM.
Doesn't appear to be possible.

Anyone else try this?

> appreciated.. Thanks.

I asked fairly casually about 5 years ago when I was on the _Sovereign of the Seas_ and was told that the radio room was a secured area (terrorists, etc) and that it wasn't open to the public. I did go by and looked through the window, but I didn't try to talk to any of the people inside (who were busy doing their jobs anyway).

Yes, you are right, the line goes "a man hears what he wants to hear and desregards the rest." That much is true. Works both ways I would say. Having read your article I found it seemed to bounce back and forth and I wasn't sure weather you were flamming the pirate (as you call them micro) broadcasters or weather you were supporting them. Being how the article was meant to be said over the air and not in written form I suppose speach inflection would have made it clear what side you were supporting.

I wasn't aware that the Class D license (I believe that is what it was called) had been elliminated. My old high school used to have our own radio station that I believe was under this type of license. The signal wasn't allowed to be heard over 100 feet or meters from the school grounds as I recall.

As far as this having anything to do with the amateur radio subject of this group, NOT! As far as my only being aware of the what is happening on the amateur band and not shortwave or whatever, SO WHO ARE YOU To JUDGE! Are you aware of who I am or anyone else for that matter? NO WAY BigSteve.

You say no one has complained about your column but me. Well I suggest you are "disregarding" other peoples comments on this group. I have seen some. Take your non-amateur topics and put them on an appropriate group.

Terry, KI7M

1698. Followup: Was this a bad idea?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 18:11:00 UTC
From: hoagy@illuminati.io.com
Message-ID: <2qe17k$5fe@illuminati.io.com>
Source record: 267412

A few days ago, I posted my article "Was this a bad idea?".
It dealt with the fact that I had witnessed a rather horrid accident.
The people involved were in jeopardy of losing their lives, and we
were at least 2 to 3 miles from a house. I, while unlicensed,
used my HT to call someone on the repeater and get emergency out there
fast. They did, and the matter was thankfully resolved with no one
being permanently injured.

Many of you were kind enough to email me you opinions, which all said
almost the same thing: Yes, it probably WAS illegal, but who would
complain?

To answer the q's proposed to me during the email barrage:
(1) Yes, the situation was life-threatening.
(2) Even if I knew I would face prosecution, and some ham-lawyer
was listening, I would have one it anyways
(3) No one was upset I did that
(4) No one ever questioned my actions
(5) It was never brought up on the network, or the repeaters.

I still feel good that I did something to save a life, though I could
have faced prosecution. However, that never crossed my mind once
during the whole ordeal. I stayed long enogh to give my witness
report, and then we left the scene.

This article has prompted me to get a debate going with some ham friends
(now that I just received my license in the mail today!) about
this, and the particular issue of the ham using the police frequencies
to get help for his friend out in CA(I believe?).

Again, thanks for all of you emailing me. I was supported all the way,
and that's all I feel was necessary.

I wonder if anyone has any experiences of the SWR-121 Antenna Analysers that AEA make ? They seem to have just arrived in the UK. Do they make any others covering wider (non-amateur) frequency ranges - would much prefer at work to take one of them up a hill-top rather than a complete sweep generator and spectrum analyser !

From: hoagy@illuminati.io.com
Message-ID: <2qe1rg$5s2@illuminati.io.com>
Source record: 267413

My Tech no-code license was processed April 26. "Great", I thought,
"I'll be expecting it Tuesday or Wednesday." Those days came and went.
Each day, I was even more and more upset. I actually had to go
places those days, and wanted the opportunity to take my HT with
me and program repeaters to hit along the way.

Friday, I didn't get to bed until 6:30 a.m. Late night working
on an article for a magazine. Again, before going to bed, I said
to myself "Oh, it COULD come today(Friday). It will. ON the night
when I"ll have to go work at that crummy bar and babysit
overgrown children, I'll get my license." (I'm a bouner at a bar -
the weekends hold nothing but dread and woe for me)

May 6, 1994: 1:30 p.m. EST. I trudge out to my mailbox and
said "Look straight up into the sky. Don't look in the box first."
I pulled out 3 letters. One small one, which was a hotel reservation
confirmation card, a standard sized one, which was a bank statement,
and then one that said it all: FEDERAL COMMUNICATIONS COMMISSION

I ripped that sucker open after running back into my apartment.
I sat down at my desk and saw the callsign: KB8SGL
"Well", I sighed, "the callsign is different from what I thought, but
hey, who cares? I'M LICENSED!"

I fired up three repeaters calling N8JJQ, Tim Porter, hoping
he'd be online. No dice. Finally, I resigned myself to fate:
No Tim! And I'm DYING to make my FIRST contact!

I went to 146.88 and said "KB8SGL listening."

Silence. Then...

"I didn't catch it all," he said, and I KNEW who it was! John!
N8IUM!

"but it *sounded* like SGL? This is N8IUM."

I sputtered "John! I've been listening to you for months! N8IUM!!"

We chatted. He asked about my class for the license, how long it took,
and who was there, etc. Then, KB8RSC cut in. Brian!
A guy who knew me from local bulletin boards. I was talking
to two hams at once. I couldn't keep up.

I thought after listening for months, I'd have it down pat. I'd know
how to handle myself. I was so excited I forgot to write down callsigns.
I didnt' even ask the right questions I promised myself Id' ask!
I was beyond ecstatic.

My HT, sadly, was starting to crackle. Even one of the best radios
can have interference from outside sources. I had to give them my
farewell, since I could barely hear them. I signed off, knowing
I had made my first contact. I'm thankful it was with an established
ham who was willing to give me a few minutes to get it all out.

Since I hadn't had my shower, and my apartment is horrible for
talking on this HT, I now sit at my terminal and type. As soon
as I'm done relaying this story, I'm going to finaly get my
shower, go outside(and a gorgeous sunny day it is!), and
talk without the appliances interfering.

Source record: 267405

>Without question, the ARRL tapes are the best. I bought some others

y'know, it's interesting that these sorts of things aren't on CD's yet. solves the print-through problem that tapes have and you could use the "shuffle" function on many players to avoid overuse of a session (resulting in memorization of a passage rather that acquiring the skill).

i'm working with a couple of guys now that are producing music and they decided to do it on CD rather than tape for their first release because:

1) not much cost differential (slightly more for CD)
2) best possible sound
3) least wear/breakage in handling
4) room for more artwork in the CD jewel box than the CC jewel box
5) preferred format for collectors & radio stations these days.

you could even make a double disc set with the sounds of radio and a morse trainer on disk 1 and disk 2 being just nothing but morse code (99 separate lessons). 74 minutes is a long time and is roughly equal to the average cassette (C-120s never did seem to work for much else other than record and play all the way through -- start cueing and jumping around and they tended to stretch and break...)

1703. Cruise ship radio operation

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 19:34:19 UTC
From: meh@cbsms1.cb.att.com
Message-ID: <CpEBp7.GMx@nntpa.cb.att.com>
Source record: 267407

Hello

I just saw some news come across concerning this subject. I just returned from a cruise to the Caribbean, if you could only see my smile. Anyway other than having a real good time I did stop at the radio room of the ship and talked to the operator. I was standing in the reception room ouside the actual room that contained the equipment. The operator gave me a complete tour of his world, low band, vhf, satellite, fax, eg. Really a small room. On this ship there were two low band, around 8 MHZ inverted vee antannas. He said one was primary and the other secondary, or spare. While I was on board I wanted to see the engin/boiler room, because I was a boiler tender during one of my navy tours. I had to request in writing permission to go on the tour, because of insurance and was warned I want at my own risk, etc. Very interesting.
Now if I go on another cruise here is what I would do if I wanted to operate from the ship. I would write a letter to the chief radio officer explaining who I am, class of license, type of operating, type of equipment you plan to bring, and that you are very flexable in regards to times of operating, and any other bits of information you think might influence or be of help to the people in charge. In my case I would stress the fact that I would be using extremely low power equipment and provide all my own equipment and all I would need is connection to their antenna coax.
Anyway it could get you permission to do some operating. I know we spent two full days at sea, well it was only supposed to be one but because of some tax revolt in Dominica we could pull into that island, just well I didn't want to become part of some island warfare anyway. But on the days when the ship is out to sea there might be time when you could have access to the spare antenna.
Like I said this was an old ship I don't know what the newer ones have in the way of low band antennas. The operator I talked to kind of implied that a lot of the ship to shore was handled by satellite now but some went by way of low band. In fact he was talking to the AT&T operator in New York as I came up to the window.
So that is what I would do if I wanted to try to operate a radio from sea.

1704. DXBase and New Russion Prefixes?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 19:35:55 UTC
From: dearnshaw@worldbank.org
Message-ID: <1994May6.193555.10260@worldbank.org>
Source record: 267420

Has anyone modified their DXBase prefix database to handle the new Russian prefixes yet?

If so, how have you succesfully preserved the old prefixes and handled the mapping?

73, Darrell. (NR3Y).

1705. Speaker-Mics for Kenwood HTs (advice wanted)

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 19:53:31 UTC
From: mrw13@namaste.cc.columbia.edu
Message-ID: <2qe77r$3lg@apakabar.cc.columbia.edu>
Source record: 267419
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I'm interested in getting opinions as to which of the four Kenwood speaker-mics would would be best for use in a high noise environment. Basically I'm going to be carrying my HT around an airport tarmac and I want to know which speaker-mic would have the best audio output with the volume turned up.

Thanks,

Marc Wollemborg

1707. AEA LogWindows

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-06 20:20:25 UTC
From: jfreedmn@hebron.connected.com
Message-ID: <2qe8q9$hnt@hebron.connected.com>
Source record: 267409

Have not received many comments or reviews since my posting a couple weeks ago on the new AEA LogWindows program. Am still interested in hearing how others like it.

I (FINALLY) got mine to work this morning. Have received excellent - but fruitless - hand holding from Tom at AEA. My problem was that ICOM 751A on Port 1 and AEA PK232 on Port 2 were not compatible with the program. I kept getting "time out" messages. AEA theorized this to be an IRQ conflict with my modem in Port 3. After a number of gyratons, I merely swapped Port 1 and Port 2 and the auto-log feature works like a charm.

Mehtods to remember if you should happen to chance on the same problem.

I have made numerous caps for different purposes, like Tesla coil etc.

General formula is C=@ A/d
where @=dialectric constant
A=area of foil
d=thicknes of the glass

@ for iron-sealing glass is 8.3
@ for soda borosilicat is 4.8
@ for 100% silicon dioxide is 3.8

Dialectric strength for std.glass is about 10kV/mm

If you send me measures of your cap I will be more specific.

We have received a science grant to visit the North Slope of Alaska, on the Artic Ocean, at Point Franklin which is a barren penusula located beteeen Barrow and Wainright. The purpose is for archeological exploration. I will visit about 5 times over a period of three years starting in July 1994. Need to contact someone on the best way (equipment and procedures) to set up a briefcase size packet link through----what, a sattelite? There is no power where I am going, except batteries and a charging generator that will be used to power the laptops used for data logging.

Also, need comments on best HF setup. I have a Kenwood TS-50 and tuner but need comments on antennas and bands. The home QTH is Pittsburgh, PA.

Did you all enjoy that? I did. I sure like new hams, they haven't
been polluted and they are full of fire.

At first I kinda pooh-poohed the tech-lites... how could making a
repeater contact be as thrilling as making MY first qso on 15 meter cw?
Obviously it WAS!

Thanks and congratulations! Give me a shout if you hear me on.

Err, with a name like "Kensy-Rudick", I'm a little surprised her "dad" is
named Waugh.

I wonder if this is another permutation of the Shergold game?

----------05/01/94----------

[1] VHF Transceivers for sale or swap.
Date: Sun May 01: 22:46:21 MST.
From: Frederick Franz (WA6VHB)
Lines: 34
Distribution: USA

I have for sale or trade two VHF mobile transceivers.

(#1) Icom-230, PLL, synthesized, 67 channels, 146 to 148 Mhz. This unit covers the bandwidth in 30 khz increments. This is the original band plan for 2 meter repeaters. E.g., 146.76; 146.79; 146.94, etc. The repeater offsets are -600 and +600khz. The radio also operates on any of the simplex frequencies, e.g.146.52; 146.55; 146.58 etc. The power output is 10 W. This unit features an analog type S meter. The radio does not have DTMF or PL (CTCSS), however there is a an accessory connector for 9V. power take-off and audio input. (I have used this for external DTMF and it works fine). The unit also has a jack for external speaker. Price is $100.00 OBO. (See swap info below).

(#2) Icom-280, PLL, synthesized, 559 channels. 143.9-145.995 Mhz in 5 khz steps. 146.01-148.11 Mhz in 15 khz steps. This is a later version than the Icom-230 for an expanded 2 meter band plan. The repeater offsets are -600 and +600 and the radio operates simplex on any of the channels. This radio has a dual power output selection of 10 watts or 1 watt. The frequency display is a 4 digit bright red LED type. This radio also has an analog type S meter, and a jack for an external speaker. Also featured is a 3 channel programmable memory. No DTMF or CTCSS. Price is $160.00 OBO. (See swap info below).

Both of the above mobile units come in factory boxes with manuals and accessories: mounting bracket; power cord; extra fuse; and hdwe. These radios are in good condition and I'll even pay the shipping!

I'll trade both of the above radios for a used dual band VHF/UHF radio such as the Alinco DR570T, DR592T or DR600T. (DR570T or DR600T preferable). Or if anyone has dual bander and doesn't want to trade, I'll offer cash. (The amount depending on condition, and if manual and accessories are furnished).

1727. A new type of ham radio club / station ....

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-07 12:32:05 UTC
From: svb@MCS.COM
Message-ID: <2qg1o5$j18@Mercury.mcs.com>
Source record: 267282

I would like to run the following idea of starting a top-notch
ham radio club by the net community.

Here is my idea of a ham radio club:

- maximum of around 10 members.
- $50 to $75 / month membership. With 10 members that
amounts to a 'club income' of $6000 - $9000 a year.
- Nice and heafty sign up fee of, let's say, $300.

Now that I got your attention throwing around some big numbers,
here is what that club would do:

- Buy / rent some room somewhere.
- Every member would have a key to that room.
- This room would be filled with state-of-the-art
equipment:
1. REAL good and big antennas (theory: if the last
storm didn't blow them down, they were not high
enough). Like how about a 120 foot tower.
2. Nice low band rig with all the goodies, like
amplifier, filters, RTTY, AMTOR, ...
3. Satellite station with nice antennas.
4. VHF and UHF equipment which is `real cool.'
5. Packet radio related equipment.
6. Repeater
7. Computer
8. Telephone line, dial up facility.
9. Anything else you could dream of? Like
repair equipment: oscilloscope, spectrum
analyzer, generator for a field day, ..

Or to summarize: we would build the worlds best ham radio
station.

The basic idea is to `pull resources.' Instead of having
10 OK type of stations at home we would have one BIG/SUPER
station somewhere at a location accessible to everyone.

What do you think about this idea? In particular if you lived
in the Chicago area would you be interested in starting such
a station/club?

One last word: when I was at Purdue I discussed that idea briefly
with the Purdue ham radio club members (via their electronic mailing
list). Some of the responses were negative to a degree which totally
surprized me - one member wrote that if he knew what call sign that

super station had, he would not even communicate with us.

So, please no flames, and stuff like that. My basic idea is to pull resources to the highest possible degree - and not to look at a ham radio club as a monthly meeting opportunity and to additionally, may be, fund a repeater.

Thanks.

Your feedback is welcome. If you send your reply to svb@dlogics.com, it will reach me a little faster.

This week's Spectrum will feature the world of weather satellites. Our guest is Jeff Kelly. Jeff is an expert at weather satellite imagery. He will tell us how to demodulate and decode those exciting pictures from space. You can be your own meteorologist this week on Spectrum.

On Saturday May 14'th we will take a look at Digital Audio Broadcasting or DAB. This high-tech system of broadcasting is in the wings and should be here near the end of the century. A few systems have been proposed for dab and a standard hasn't been decided as of yet. Our guest will be Ted Schober. Ted has been on the leading edge in the world of DAB and will give us a look into the radio of the future.

--
Spectrum airs live Sunday at 0200 UTC (2200 EDT Saturday) on:

WWCR, 5810 KHz, Nashville, TN (World Wide)
WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)
KHNC, 1360 AM, Denver, CO (Denver Area)
Omega Radio Network, Galaxy III, X17, 5.8 MHz WIDE audio. (Satellite)

Spectrum is rebroadcast:

Sunday at 1500 EDT, on WIFI, 1460 AM, Philadelphia, PA (Philadelphia Area)

I'd be willing to pay $26 a year if it meant we would get decent
service from the FCC, including vigorous enforcement against
non-amateur use of ham bands.

1732. Help! Intermod/440/Knwd732/filter?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-07 17:02:01 UTC
From: U29255@uicvm.uic.edu
Message-ID: <94127.120201U29255@uicvm.uic.edu>
Source record: 267300

Thanks for reading this... I have a remote base setup in Chicago that is
almost unuseable due to intermod (or something...???) on the 440 band.
It seems the paging companies just splatter megawatts all over the place
indiscriminately, but that is another discussion (altho I'd be happy
to entertain your thoughts on THAT matter too...).
WHAT CAN I DO about the 440 splatter? I have a dual band (high gain /
high altitude) antenna feeding a diplexer which splits 2M and 440 into
seperate cables into the Kenwood 732. I could put a band-pass filter
on the 440 side only.
Do you know where I can buy such a filter, or plans for one, or
or have any other suggestions? I'd rather buy than build, yes, I'm
an "appliance operator", rather just plug n play. But will build
if I have no recourse. Thanks for your reply! Please E-mail it to me. 73!

1733. Re: Best code-speed improvement tapes?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-07 17:18:23 UTC
From: U29255@uicvm.uic.edu
Message-ID: <94127.121823U29255@uicvm.uic.edu>
Source record: 267301

Hi! Name is Ed. QTH Univ of IL, Chicago. My advice: don't use tapes, or at least, don't use ONLY tapes. For me, I tended to remember the message on the tape, so they were really only good ONE TIME THROUGH! After 2 or 3 times thru the tape, I knew what was coming. I only had to 'decode' the first letter or two and I knew the rest of the message. Although this is good to instill confidence, and also helps reinforce, since you can be writing and 'verifying-copying' as you're listening, you really don't get the same effect that you will when you take the test (or when you have a QSO on CW, for that matter). What WOULD I recommend? I hope you have a PC. Get MorseTutor or SuperMorse. Ask around, one of them is usually available either from another ham or a bulletin board system (BBS) in your area. Probably could get it from an ftp site on internet. If you don't own a PC and don't need one for anything else (hard for me to picture that, but I suppose it's possible), try to get access to one (borrow, rent, go to local school/unioversity/library or something). SECOND SUGGESTION: Code practice broadcasts from W1AW. The schedule is printed in QST each month (available at most magazine stands) and many other sources. Ask another ham. I don't have the sked in front of me or I'd list it here... but this is great practice, if you have a receiver, because the messages include sentences and random letters/numbers such as long lists of contest scores. It starts out at 5, goes to 7.5, and then 10, 13 and 15 words per minute (something like that). It kinda encourages you to push your speed if you want to keep listening. It's on like twice a day, check the sked. I know whatcha mean about the Advanced, I stopped there fro a few years myself... was always frightened of the 20 wpm. OH, ONE MORE HINT: If you were to put in one hour a week, it might take 250 hours to get up to speed (five years time). If you practiced 5 hours a day, it might take you a total of 65 hours , or less than three weeks. Of course you can't practice 5 hours a day (who knows, maybe you could, I couldn't), but the point is, the more hours you put in per day, not only the less elapsed time is it going to take, the less TOTAL time it's going to take, because each time you start up, you don't have to spend so much time getting back up to the speed you left off at (it tends to leak out of your brain as you are resting between sessions, slowing your speed down). So GO AT IT AS HARD AS YOU CAN, time-wise, often-wise, and effort-wise. Practicing with headphones is also a tremendous boost.

73 and good luck!

The best thing to do with this kind of radio is to use it as a cross-band repeat hand-held thru another kenwood base or mobile doing the cross-band-repeating, such as a 732, 741, 742 etc. Then you can run the milliwatt power level, run it all day, never worry about running out, and always have a plenty good signal. Write me for more comments if you please.

73:

45. Caveat
46. Credits

---

1. Is a licence necessary ?

A licence for amateur frequencies is only required if you intend to transmit on those frequencies. A listener's licence does not exist. The

requirement to hold a licence is in the Wireless Telegraphy Act 1949. You do not need a licence to purchase or own an amateur transceiver, only to transmit with it. No licence is required to receive any amateur transmission.

2. How do I get a licence ?

Unless you already hold a licence issued by another country (see below) then you must satisfy the licencing authority (the Radiocommunications Agency (RA) currently) that you are technically competent to use an amateur transmitter. The DTI lays out the minimum standards and the City & Guilds Institute holds examinations to test licence applicants. You must obtain a pass in the examination(s) before submitting the licence application form to the RA. A useful publication from the RA is 'How to Become A Radio Amateur' obtainable free from the RA at Waterloo Bridge House, Waterloo Bridge Road, London SE1 8UA. Telephone 071 215 2150 (+44 71 215 2150). This publication includes an application form.

3. What are the types of licence ?

The primary licence type is the Amateur Radio Licence. This licence has 'A' and 'B' variants. Holders of the 'A' licence are permitted to transmit on all the amateur frequency bands allocated in the UK. The 'B' licence holder is restricted to transmitting on those frequency bands above 30MHz. Obtaining either variant of licence requires a Pass in the Radio Amateur's Examination. The second licence type is the Amateur Radio Novice Licence. Holders of Novice licence are restricted to transmitting on a small number of the frequency bands available to holders of an Amateur Radio Licence, and to which portions of those bands they may use. There are 'A' and 'B' variants with holders of the 'B' licence restricted to transmitting on bands over 30MHz. Obtaining a Novice licence requires a Pass on an organised Novice Course and a Pass in the Novice Examination. In the case of either a Novice or a Radio Amateur Licence, the licence issued is a Class 'B' licence unless the applicant has passed a Morse code test in which case a Class 'A' licence is issued.

4. What is the Radio Amateur's Examination (RAE) ?

The RAE is a two paper multiple-choice examination held twice yearly at City & Guilds Examination Centres. It tests electronic theory, licence conditions, interference & operating procedures. The C&G reference is 765. The C&G charge GBP16.50 (1993 level) for each paper, a Pass on both is required. The Examination Centre may also make a charge. Several books exist for self-teaching of the necessary subjects to pass the RAE and these are available from the RSGB, amongst others (see below).

5. What is the Novice Course and Exam (NRAE) ?

The Novice Course is a 30 hour training course organised by the Radio Society of Great Britain and run at local radio clubs and schools. The course typically lasts 12 to 16 weeks. The courses will normally be timed to finish a few weeks before one of the four Novice RAE's held

each year. The C&G reference is 773. The Novice Course Instructors will prepare a candidate for the NRAE. The Exam is one paper testing a wide range of subjects learnt on the Novice Course. A Pass on both the Course and the NRAE is required.

6. Where can I take these exams ?

Both the RAE and NRAE can be held at any City & Guilds exam centres, but it is up to each centre to decide whether to hold the examinations and local centres should be contacted direct. Some radio clubs and schools have registered themselves as C&G centres. There is a list of the participating C&G centres in the 'Callbook and Information Directory' published annually by the Radio Society of Great Britain (RSGB). The Novice Course is run locally but the RSGB has a register of courses and can advise you of the nearest one. Their telephone number is 0707 659015 (+44 707 659015).

7. What if I fail ?

If you fail one of the papers of the RAE then you can re-take only that paper at the next examination. If you fail both papers then you can re-take the RAE. There is no limit on the number of times you may take the RAE, but the fee will be charged each time. Similarly for the Novice Course and NRAE, either element can be re-taken.

8. I passed the exams, now what ?

Complete the application form (Novice Instructors have forms for Novice applicants) and send it with the RAE/NRAE Pass slip (and Novice Course Pass slip if for a Novice licence) to Subscription Services Ltd (SSL), together with the fee. See Q38. The fee is currently GBP15 for all classes of licence, but Novice licence holders under 21 years old are not required to pay the fee. The licence can take 4 to six weeks to be delivered. The licence will show your callsign. You also receive a booklet giving information about what your licence permits you to do.

9. What is a callsign ?

A callsign is a unique identifier for you whilst transmitting. Callsigns are issued to an individual radio amateur with their first licence document. A callsign consists of a mixture of letters and numbers from 3 characters long. In the UK, the shortest callsigns are 4 characters long. Holders of the Radio Amateur Licence in the UK have callsigns with the prefix 'G'. Holders of Novice Licences have the callsign prefix '2'. Sample prefixes for other countries are F;France, D;Germany, I;Italy, N,W,A;USA, VK;Australia. Prefixes are allocated by the International Telecommunications Union, an agency of the United Nations. There are secondary prefixes in the UK to determine which part of the UK the licence holder is operating from:

Radio Amateur Licence Novice Licence
England G 2E
Scotland GM 2M

Wales GW 2W
Northern Ireland GI 2I
Isle of Man GD 2D
Jersey GJ 2J
Guernsey & GU 2U
dependencies

In the case of club licences, a different secondary prefix may be used:

England GX
Scotland GS Novice licences may not
Wales GC be used as club licences.
Northern Ireland GN
Isle of Man GT
Jersey GH
Guernsey & GP
dependencies

Following the prefix, a UK callsign has a number that determines the class of licence, ie whether it's a class 'A' or class 'B' licence:

Radio Amateur Licence Novice Licence

Class A 0,2,3,4, all plus 0 plus three letters
three letters
2,3,4,6,8 plus two
letters

Class B 1,6,7,8 all plus 1 plus three letters
three letters

The latest callsigns being issued are in the G0, G7, 2E0, 2E1 series. A valid callsign would be G1PJJ or G3YMD or G2FA. The first one is Class B, the second two are Class A. A valid Novice Class A callsign would be 2E0AAK.

The callsign allocated must be transmitted in accordance with the current licence conditions.

10. What frequencies am I allowed to use ?

The frequency bands allocated to Amateurs are published in the licence conditions booklet that accompanies each licence. The current bands allocated to Radio Amateurs are:

1.810-2.000, 3.500-3.800, 7.000-7.100, 10.100-10.150, 14.000-14.350
18.068-18.168, 21.000-21.450, 24.890-24.990, 28.000-29.700,
50.000-52.000, 70.00-70.50, 144.0-146.0, 430.0-440.0, 1240-1325,
2310-2450, 3400-3475, 5670-5680, 5755-5765, 5820-5850, 10000-10500,
24000-24250, 47000-47200, 75500-76000, 142000-144000, 248000-250000.
All frequencies in MHz. Class B Licence holders are restricted to transmitting on bands above 30MHz. Geographical restrictions apply to the 430-432MHz sub-band.

The current bands allocated to Novices are:

1.950-2.000, 3.560-3.585, 10.13-10.14, 21.100-21.149, 28.060-28.190,
28.225-28.500, 50.0-52.0, 432.0-440.0, 1240-1325, 10000-10500.
All frequencies in MHz. Class B Novice Licence holders are restricted
to transmitting on bands above 30MHz.

Bands from 1.8MHz to 30MHz are known as HF (High Frequency)
Bands from 50MHz to 146MHz are known as VHF (Very High Frequency)
Bands from 430MHz to 1.3GHz are known as UHF (Ultra High Frequency)
Bands above 1.3GHz are in the Microwave region and are also known as
SHF (Super High Frequencies)

11. What can I transmit ?

The transmission types available depend only on whether there's
sufficient bandwidth on the band you intend to use for that
transmission. You would not try to transmit a 6MHz television signal on
a 2MHz wide band. Otherwise, all phone, Morse, television, fax and data
modes are permitted on all bands. There is, however, general agreement
in the UK on use of particular modes on each band.

So far as the content of the transmission is concerned, this does
depend on the mode in use. You may not transmit any copyrighted
material without the copyright owner's permission. You cannot (except
under emergency conditions) transmit a message that is not from another
amateur, however you cannot store-and-forward any message that is not
from yourself. This area of licencing is not easy to explain in few words
and the licence booklet should be read. See Q33 in connection with those
who may transmit at your station and Q30 for restrictions regarding
packet-radio messages.

For Novice Licence Holders, the restrictions are slightly more severe
and several bands are only available for Morse transmissions. Novices
are not permitted to use some bands at all, notably 144MHz.

See Q32 for the band-plans.

12. How do I know what to do ?

Hopefully in preparing for the exam, you've read and learnt the licence
conditions and operating procedures. The best way of learning though is
to listen to other amateurs operating. Hopefully you can listen whilst
you're learning so when the licence arrives you'll be ready to transmit
straight away. In any case, if you get it wrong 'on the air' then some-
one will correct you.

13. Where can I buy a radio ?

Many larger towns have shops that stock Radio Amateur equipment. Many
advertise in the Amateur Radio press. Local amateurs will advise on the
better local emporiums but a lot of business is mail-order, with the
usual caveats. You do not usually need to take your licence along when
purchasing a radio, but some suppliers are asking for proof of being
licenced before selling you a radio, particularly higher-powered

models. An alternative means of comparing and buying radios is at a Rally. These are held all over the country between March and October usually, with a few just before Christmas. A Rally is a way that Radio Amateurs can meet and talk, and there are usually many trade stands from local and national dealers. There's often a bring-and-buy where you can find a second-hand bargain. Rally information is published in all the Radio magazines and also broadcast on the RSGB's news service each Sunday, GB2RS (see Q37). Lists of Rallies are distributed on the packet-radio BBS network by G6CZV addressed to RALLY@GBR.

14. Can I build a radio ?

Yes, and you could save yourself lots of cash. Whether you want to try a design of your own, use a published design and etch your own boards or build a kit from one of the UK kit suppliers, there is no restriction on 'home-brew' - not yet. If you're not used to building, don't try and build a transmitter first, try out your skills on a receiver and see how you cope. You'll find many of the kit suppliers at rallies. Many of the magazines feature construction projects, often tied to a specific kit supplier.

15. Can I modify a radio ?

Yes. There is a lot of ex-commercial and ex-emergency services radio equipment around and plenty of information on modifying it to make it work on amateur frequencies. But, not all of it is suitable, so ask before you buy. Also, there is a restriction on converting former CB (27MHz) equipment for use on 28MHz and a permit is required from the Radiocommunications Agency.

16. I have a UK licence, can I use it abroad?

Holder of a full UK licence can use it abroad, subject to restrictions, holders of novice licences can't. If you intend to operate within Europe, then the country you're operating from may have signed the CEPT agreement, in which case no additional permission is needed to operate there, simply sign as (eg. for France) F/own-call . Check on your own licence validation document which countries have signed the CEPT agreement. Operating in any country that is not a CEPT signatory means obtaining advance permission from that country's authorities to operate there - normally well in advance of your trip. The RSGB can offer advice and application forms for most countries that have a reciprocal licencing agreement with the UK. The relevant embassy/high commission or consulate can also offer advice. Be aware that amateur radio is illegal in some countries. It is also illegal in some countries to even transit the country carrying radio transmitters without the appropriate licence. In all cases, check.

17. What is a CEPT licence ?

A CEPT licence is a licence issued by a country that is a signatory to the CEPT agreement no. T/R 61-01. CEPT is the European Posts and Telecommunications Committee and sets standards between European

countries. Those countries that have signed the agreement include: Austria, Belgium, Switzerland, Germany, Denmark, Spain, France, Liechtenstein, Greece, Hungary, Italy, Irish Republic, Luxembourg, Monaco, Netherlands, Norway, Sweden, Finland, Czech Republic, New Zealand, United Kingdom. Under the terms of the agreement, holders of a CEPT class 1 licence, are allowed to use, without further formality, all amateur bands in the country being visited that are also permitted under the terms of the licence-holders own licence. Holder of a CEPT class 2 licence are restricted to bands above 144MHz that are available in the licencee's own country and the country being visited. If you have a UK licence, look at your licence validation document. At the top you will see a "CEPT equivalent class", this will be 1 for a class A licence, 2 for class B.

18. I have a CEPT licence, how do I sign in the UK ?

Holders of a licence issued in accordance with the CEPT (European Post and Telecommunications Committee) Recommendation T/R 61-01 may operate in those countries that have verified the Recommendation. The UK is a signatory and amateurs with CEPT licences can operate as G/own-call in England, GW/own-call in Wales etc. without formality. The bands available are restricted to those which are permitted in this country, if the licence holder is permitted to use them in their OWN country. A class 2 CEPT licence holder is restricted to 144MHz and above.

19. I want to operate in the UK, I don't have a CEPT licence.

If your licence is not marked as a CEPT licence, then you need to apply to the Radiocommunications Agency for a temporary reciprocal licence. There are reciprocal agreements with many countries, if in doubt ask your own licencing authority or national society. Obtain a reciprocal licence application form from your own national society or direct from the Radiocommunications Agency and return it with proof of your licence and the fee of (currently) GBP15. Allow 8 to 12 weeks if you need the licence returned to your home address, 4 to 6 weeks if it is to go to the address you'll be staying at in the UK. You sign as G/own-call in England, GM/own-call in Scotland etc. You are bound by the UK licencing conditions and will receive a copy of the licencing booklet with the reciprocal licence. The temporary reciprocal licence is valid for 12 months. You can contact the Radiocommunications Agency on 071 215 2150 (+44 71 215 2150).

20. What is morse ?

Morse is the simplest means of transmitting a recognisable signal between stations. Morse is, at its simplest, turning on and off the transmitter in a manner that represents letters or numbers, according to the Morse Code. Morse, by its nature, is likely to work between two stations when all other modes fail due to interference or sheer lack of signal strength, given the narrow bandwidth required and the low signalling rate, although no mode is perfect.

21. Where do I learn morse ?

There are broadcasts on the HF, VHF and UHF amateur bands that are designed to bring you from a low level to a good level of morse, but these assume that you at least know the 'code' first. These broadcasts in the UK are co-ordinated by the RSGB (0707-659015) and are operated under the callsign GB2CW. There are other HF broadcasts world-wide and the most prominent of these are by the ARRL (American Radio Relay League) under the call W1AW. Another way of learning morse is from an instructional tape. These tapes are available from the RSGB and the G-QRP club (see below) amongst other sources.

22. Do I need to learn morse ?

If you have no intention of transmitting on the HF bands (below 30MHz) then no, you don't need morse. The main purpose of morse presently is to provide access to the HF bands, morse is a requirement of the ITU and is mandatory in most countries' licencing for HF licences. Above 30MHz morse may still be useful if you want to use meteor-scatter (MS) or use some satellites. If you want to use the HF bands, then a Class 'A' licence is required. If you already have a Class 'B' licence then you need to take either a 12 words-per-minute morse test (for an Amateur Licence 'A') or a 5 wpm morse test (for a Novice Licence 'A'). Additionally a holder of an Amateur Licence 'B' can take the 5 wpm morse test and be issued with a Class 'A' Novice Licence as well as their Class 'B' Licence. The morse tests are organised by the RSGB on behalf of the Radiocommunications Agency. Tests are held in most areas 3 or 4 times a year, depending on demand, as well as at some major rallies.

23. What is a repeater ?

Repeaters are to be found across the country, mainly on 145MHz and 433MHz. A repeater is an un-manned station that will retransmit on its output frequency any signal heard on its input frequency that satisfies certain conditions. On the 2m band (144-146MHz) repeaters are found on the following frequencies:

Output (MHz) Input (MHz) Channel no.
145.600 145.000 R0
145.625 145.025 R1
145.650 145.050 R2 The input frequency
145.675 145.075 R3 is always 600kHz below
145.700 145.100 R4 the output frequency.
145.725 145.125 R5
145.750 145.150 R6
145.775 145.175 R7

On the 70cm band (430-440MHz) repeaters are found on the following frequencies:

Output (MHz) Input (MHz) Channel no.
433.000 434.600 RB0
433.025 434.625 RB1

433.050 434.650 RB2
433.075 434.675 RB3
433.100 434.700 RB4
433.125 434.725 RB5 The input frequency
433.150 434.750 RB6 is always 1.6MHz above
433.175 434.775 RB7 the output frequency.
433.200 434.800 RB8
433.225 434.825 RB9
433.250 434.850 RB10
433.275 434.875 RB11
433.300 434.900 RB12
433.325 434.925 RB13
433.350 434.950 RB14
433.375 434.975 RB15

It's worth pointing out that repeaters cost money to run and the RSGB does not contribute to their costs, in fact it no longer pays for the licences. Repeaters are paid for by local groups and clubs. If you use a repeater, ask on the repeater how you can join the group.

24. How do I use a repeater ?

With your VHF or UHF transceiver, change the displayed frequency to the output frequency of the repeater you wish to use, there is insufficient space here to list all the repeaters available. Locate the button/function on the transceiver to enable repeater or duplex mode, where there is an option for either positive or negative transmit shift then make sure that it is set to negative for the 2m band and positive for the 70cm band. Refer to Q23 for the exact frequencies.

To use a repeater, key the PTT (push-to-talk), send a short burst of 1750Hz tone (tone-burst), keep the PTT keyed and speak for a few seconds (but not whilst the tone-burst is being sent), release the PTT and you should receive a pip or some other indication that your signal was retransmitted by the repeater. The 1750Hz tone-burst is required only when the repeater is not in use and on some transceivers is automatic when repeater/duplex mode is enabled.

Some repeaters have the facility to accept CTCSS instead of a tone-burst. If a transceiver is capable of sending CTCSS tones then this should be used instead of a tone-burst where possible. See Q25.

25. What is CTCSS (Tone Squelch) ?

CTCSS stands for Continuous Tone-Coded Squelch System. The principle is that a sub-audible tone is continuously transmitted in addition to the speech (or other) signal. The tones used are below the normal hearing frequency range and do not interfere with the other signal. In the UK these tones may be used instead of a 1750Hz tone to access repeaters. The UK has been divided into 23 areas and a particular tone has been allocated to each area. Those repeaters that support CTCSS will normally send the appropriate letter (designating the tone frequency)

in morse after the repeater callsign. The tones used are a subset of those available and are :

Tone letter Frequency (Hz)
A 67.1
B 71.9
C 77.0
D 82.5
E 88.5
F 94.8
G 103.5
H 110.9
J 118.8

26. What is packet radio ?

Packet radio is a data communications mode that uses a modified form of the LAPB signalling protocol on HDLC. Simply put, two packet radio stations that are within direct range of each-other can establish an error free data connection, normally at 1200 baud. Packet radio stations may also act as automatic repeaters ('digipeaters') and can relay other stations' signals. Using packet radio, many bulletin boards or mailboxes exist to handle messages for those active on packet radio in their locality, these messages can include 'bulletins' that are open to all and are often distributed across every packet radio bulletin board in the UK, or further afield. Most packet radio is operated in the 2m and 70cm bands.

For a fuller description of packet radio see the digital-faq posted in rec.radio.amateur.digital.misc and available by anonymous FTP from:
rtfm.mit.edu:/pub/usenet/news.answers/radio
ftp.amdahl.com:/pub/radio/amateur

27. What equipment do I need for packet ?

Life used to be simple, all you needed for packet was a VHF or UHF transceiver (depending on where you lived), a terminal or computer running a terminal-emulation program and a Terminal Node Controller unit (TNC). The TNC contains a microcomputer and controls all communication between the terminal and the remote TNC being connected to. Now cards containing a TNC (or two) are available for the PC & compatibles and other computers. Additionally, there is a system that uses a simple modem, or a TNC acting as a simple modem, with the host computer controlling the communications. Finally there are the TNC's that do not require a local terminal ..... ask an expert.

28. What are the limitations of packet-radio in the UK ?

At first packet was illegal in the UK, or maybe it wasn't. The licence did not make this clear. Now it is an established communication mode and recognised by the RA. This means that they have made a few special arrangements if you want to run packet. Firstly you must send a morse ident to give your full station callsign at least every 30 minutes. And

you should send a packet ident every 15 minutes. Next, you may only pass on mail addressed to a specific amateur station, unless you hold a Notice of Variation to your callsign (designated by a GB7... callsign) - in which case you don't need to read this section :-) .

29. I want to leave my packet-radio station unattended.

Providing the commencement of unattended packet-radio operation is logged in the station log then unattended operation may be in the following bands or sub-bands: 50-51MHz, 70.3125MHz, 70.3250MHz, 70.4875MHz, 144-146MHz, 432.6-432.7MHz, 433.6-433.7MHz,1299-1300MHz (excluding Northern Ireland), 2310-2450MHz, 3400-3475MHz, 5650-5680MHz, 5755-5765MHz, 5820-5850MHz, 10000-10250MHz, 10270-10300MHz, 10400-10500MHz 24000-24050MHz and all bands including and above 47000MHz. The position regarding the 70cm band is changing and the latest position should be sought in all cases where the licencee is not certain. Recently, the RA have announced that they will enforce action against the unattended operation of packet stations that use club callsigns and not personal callsigns.

30. Can I use packet to exchange messages with Internet users?

The only messages that may be carried by the packet network are those sent by licenced amateurs. There are no official gateways from packet to Internet in the UK due to the problem of controlling which messages are from licenced amateurs on the Internet side. This is under review by the RA. There are, however, gateways in the US and elsewhere that will forward internet email from licenced amateurs onto the packet bbs system. It is necessary to register your callsign and email address before using these gateways.

31. What facilities are available in the UK by packet ?

Most user-level packet is at 1200baud with some linking still at 1200baud but moving to 9600baud, or beyond. At this data rate, little more than BBS access is possible although the DX Cluster network for notification of DX is very strong in some areas. TCP/IP (and its related servers) are established in some areas but there is by no means a national TCP/IP network.

31. How do I obtain a .ampr.org IP address ?

There are local co-ordinators assigned to each RSGB region, and in some cases they delegate address allocation further to local co-ordinators. Your nearest BBS sysop will probably know who runs TCP/IP locally - if he doesn't there's a fair chance that activity is so low that you won't find any other operators anyway !

If you have any difficulty, the UK co-ordinator is Paul Taylor, G1PLT (ptaylor@email.meto.govt.uk) . He should be able to put you in touch with your regional co-ordinator.

32. UK Band Plans

Use of the allocated bands in the UK is voluntary to a large extent.
Providing your signal remains within the band edges you may transmit
using any mode you like, but see the booklet BR68 from the
Radiocommunications Agency. The voluntary band plans are as follows:

1.810-2.000MHz (160m)

1.810-1.838 CW only
1.838-1.842 Digital modes (excluding packet radio) and CW
1.842-2.000 Phone and CW

3.500-3.800MHz (80m)

3.500-3.580 CW only
3.580-3.620 Digital modes and CW
3.620-3.800 Phone, CW, SSTV, Fax

7.000-7.100MHz (40m)

7.000-7.035 CW only
7.035-7.045 Digital modes, SSTV, Fax and CW
7.045-7.100 Phone and CW

10.100-10.150MHz (30m)

10.100-10.140 CW only
10.140-10.150 Digital modes

14.000-14.350MHz (20m)

14.000-14.070 CW only
14.070-14.099 Digital modes and CW
14.099-14.101 Beacons
14.101-14.112 Digital modes, phone and CW
14.112-14.250 Phone, SSTV, Fax and CW
14.250-14.350 Phone and CW

18.068-18.168MHz (17m)

18.068-18.101 CW only
18.101-18.109 Digital modes and CW
18.109-18.111 Beacons
18.111-18.168 Phone and CW

21.000-21.450MHz (15m)

21.000-21.080 CW only
21.080-21.120 Digital modes and CW
21.120-21.149 CW only
21.149-21.151 Beacons
21.151-21.450 Phone, SSTV, Fax and CW

24.890-24.990MHz (12m)

24.890-24.920 CW only
24.920-24.929 Digital modes and CW

24.929-24.931 Beacons
24.931-24.990 Phone and CW

28.000-29.700MHz (10m)

28.000-28.050 CW only
28.050-28.150 Digital modes and CW
28.150-28.199 CW only
28.199-28.201 Beacons
28.201-29.200 Phone, SSTV, Fax and CW
29.200-29.300 Digital modes, phone and CW
29.300-29.550 Satellite downlinks
29.550-29.700 Phone and CW

50.000-52.000MHz (6m)

50.000-50.100 CW only
50.100-50.500 SSB and CW only
50.500-51.000 All modes
51.000-51.125 SSB and CW only
51.125-51.410 All modes
51.410-51.830 FM
51.830-52.000 All modes

70.000-70.500MHz (4m)

70.000-70.030 Beacons
70.030-70.250 SSB and CW only
70.250-70.300 All modes
70.300-70.500 FM phone and packet radio

144.000-146.000MHz (2m)

144.000-144.150 CW only
144.150-144.500 SSB and CW only
144.500-144.845 All modes
144.845-144.990 Beacons
144.990-145.200 FM Repeater inputs
145.200-145.600 FM simplex
145.600-145.800 FM Repeater outputs
145.800-146.000 Satellite uplinks/downlinks

430.000-440.000MHz (70cm)

430.000-431.000 All modes
431.000-432.000 All modes - see note
432.000-432.150 CW only
432.150-432.500 SSB and CW
432.500-432.800 All modes
432.800-432.990 Beacons
432.990-433.000 All modes
433.000-433.400 FM Repeater outputs
433.400-434.600 FM simplex and packet radio

434.600-435.000 FM Repeater inputs
435.000-438.000 Fast-scan TV and satellite uplinks/downlinks
438.000-439.800 Fast-scan TV
439.800-440.000 Packet Radio

note to 431-432MHz sub-band: This sub-band is not permitted to be used within a 100km radius of Charing Cross, London.

1240.000-1325.000MHz (23cm)

1240.000-1243.250 All modes
1243.250-1260.000 ATV, FM TV repeater inputs
1260.000-1270.000 Satellite uplinks
1270.000-1272.000 All modes
1272.000-1291.000 ATV, FM TV repeater input
1291.000-1291.475 FM Repeater inputs
1291.475-1296.000 All modes
1296.000-1296.150 CW
1296.150-1296.800 SSB
1296.800-1296.990 Beacons
1296.990-1297.000 All modes
1297.000-1297.550 FM Repeater outputs
1297.500-1298.000 FM simplex
1298.000-1298.500 All modes
1298.500-1300.000 Packet radio
1300.000-1325.000 ATV, FM TV repeater outputs

[Editor's note: I do not propose to list the band-plans for the other microwave bands, unless asked.]

33. Can anyone use my radio ?

Anyone who holds a current UK-issued licence, or a valid CEPT licence, or a valid reciprocal licence, may use your station for frequencies for which they are licenced under their own callsign. In addition to those listed, a UK Novice licencee, holder of a pass slip from the Radio Amateur's Examination or an Amateur Radio Certificate (who does not hold a licence), or a licenced amateur from any other country, may operate under the station's callsign on frequencies that you are licenced to use providing you are in attendance.

When operating a club station, a message may be transmitted from any person providing it is a greetings message of less that two minutes duration and is sent and received only within: UK, USA, Canada, Falkland Islands or Pitcairn Island.

When using a digital mode, anyone may type the message for transmission.

34. I have a dual-band rig, can I use it as a repeater ?

Some VHF/UHF rigs are capable of acting as a cross-band repeater, operated by carrier-sense. Unless these are licenced as a repeater (with a GB3.. callsign) or being operating by an emergency

communications group under a current 'talk-though' permit then they may not be used as a repeater.

35. My neighbour complains he can hear my voice on his television.

This is a case of Radio Frequency Interference and the correct term is 'Electromagnetic Compatibility' or EMC. Where the reasons behind the problem is not clear (and they seldom are), consult one of the many guides to EMC problem-solving. One good source is the ARRL Handbook (published annually by the American Radio Relay League). Another is the Radio Amateurs' Guide to EMC by R. Page-Jones G3JWI (published by the RSGB). Abbreviated advice from the latter volume is to be found in the RSGB Callbook & Information Directory. There is a network of EMC Co-ordinators to give local advice in extreme cases. Details from the RSGB. For those suffering interference, a useful guide is a booklet called How to Improve Television and Radio Reception, published by the Radiocommunications Agency a few years ago. It is now out of print, but many copies are in circulation.

36. I want to take my radio to sea / use it in an aircraft.

Maritime Mobile (/MM) operation has been a part of the UK licence for several years now, previously it was a separate licence. On a vessel that is not yours you must obtain the written permission of the vessel's master before installing or using a transceiver (this includes cross-channel ferries). The master may insist that you observe radio silence at times and this must be done. In international waters, only those bands that are permitted for the ITU region being visited may be used. In non-UK territorial waters, be aware that amateur activity in harbours may not be permitted. If in doubt, seek advice from that country's authorities before travelling.

Aviation mobile in the UK is not permitted and the licence is quite specific about this. If you are carrying a transceiver by air make certain you can switch it on to satisfy the airport security then switch it off and leave it off.

37. The Radio Society of Great Britain (RSGB).

The RSGB is the national society representing amateurs in the UK to our licencing body (The Radiocommunications Agency). Many people have many views on the RSGB and it has often been criticised, but it's the only body of it's kind that we have :-)

The RSGB's address is: RSGB
Lambda House
Potters Bar
Herts
EN6 3JE
U.K.

The main telephone number is 0707 659015 (+44 707 659015)
The fax number is 0707 645105 (+44 707 645105)

They do not have a reliable (or easy) e-mail connection to HQ (they use BT Gold :-( ) but several RSGB Committee members are active on Internet and/or packet-radio and their details will be added to this FAQ as and when they are known.

The RSGB is the main publisher of amateur radio books in the UK, they also publish a monthly magazine for members called 'Radio Communication', more commonly known as 'RadCom'. The editorial team for RadCom can be contacted on 0707 659015, fax 0707 649503.

The RSGB broadcasts a weekly amateur radio news summary every Sunday under the callsign GB2RS. This is broadcast nationally on 3.640, 3.650, 3.660, 7.0475MHz. Local broadcasts are on 51.530, 144.250, 145.525MHz. Times vary, see the Callbook and Information Directory for full details. The text is copied to packet-radio (NEWS@GBR) and to Usenet by Ted Batts G8LWY.

38. The Radiocommunications Agency (RA).

The RA is the licencing body in the UK. Any queries about licencing that cannot be otherwise dealt with should be directed to the RA. Their address is: Radiocommunications Agency
Room 712
Waterloo Bridge House
Waterloo Bridge Road
London
SE1 8UA
U.K.

Their telephone number for enquiries is 071 215 2150 (+44 71 215 2150).

The RA publishes a number of advice leaflets and information sheets and these are generally free. These can be obtained by contacting the RA's Information and Library Service at Room 605 in Waterloo Bridge House. The telephone number is 071 215 2072 (+44 71 215 2072), fax 071 928 4309 (+44 71 928 4309).

For queries over licence renewals, contact Subscription Services Ltd (SSL): Radio Licencing Centre
Subscription Services Ltd
PO Box 885
Bristol
BS99 5LG.

Their telephone enquiry line is open Monday to Saturday 0830 to 2200hrs on 0272 258333. There have been many reported problems with licence renewals recently and this should be borne in mind.

39. Local Clubs.

Probably the best way to meet local radio amateurs is at the local club meetings. These are too numerous to list here but once again a full list is found in the Callbook and Information Directory, from the RSGB.

Many clubs also feature in the "What's On/Meetings" section of local
newspapers and the various amateur radio magazines.

40. Specialist Clubs.

For those with an interest in a specialist branch of amateur radio,
then these clubs and societies tend to be very useful:

Satellites: AMSAT-UK

AMSAT-UK
94 Herongate Road
Wanstead Park
London
E12 5EQ
081 989 6741 (+44 81 989 6741)
fax 081 989 3430 (+44 81 989 3430)
Internet: R.Broadbent@ee.surrey.ac.uk
Compuserve: 100024,614 Ron Broadbent

AMSAT-UK publish an excellent magazine "Oscar News"
for those with an interest in amateur satellites.

Data: The British Amateur Radio Teledata Group - BARTG

Peter Adams
Membership Secretary
BARTG
464 Whippendell Road
Watford
Herts
WD1 7PT
Packet: G6LZB@GB7BST

BARTG publish a magazine "Datacom" aimed at all aspects
of data communication, RTTY, Amtor, packet and the
newer modes.

Television: The British Amateur Television Club - BATC

Dave Lawton
Membership Secretary
BATC
"Grenehurst"
Pinewood Road
High Wycombe
Bucks
HP12 4DD

The BATC publishes a useful magazine "CQ TV" covering
all aspects of amateur television with many projects.

Low Power: The G-QRP Club

The G-QRP Club
St. Aidan's Vicarage
498 Manchester Road
Rochdale
Lancs
OL11 3HE
Tel/fax: 0706 31812 (+44 706 31812)
Internet: g3rjv@gqrp.demon.co.uk

The G-QRP Club is organised by the Rev. George Dobbs, G3RJV, a well-respected author of amateur radio articles. The Club publishes a magazine "Sprat" aimed at the home constructor and QRP operating in particular. It is a very readable magazine. The Club is also a prolific book producer, most of which are available from the RSGB.

Listening: International Short Wave League - ISWL

Mrs E. May
Hon. Secretary ISWL
10 Clyde Crescent
Wharton
Winsford
Cheshire
CW7 3LA

The ISWL caters for those with an interest in receiving on both the amateur and broadcast bands. It publishes a magazine "Monitor".

Of course, there are many more clubs than those listed above but these are the clubs primarily dealing with branches of amateur radio.

41. Commercial Magazines.

The RSGB's RadCom is not available in newsagents as it is a members' journal. Those that you will find in the newsagents are:

Practical Wireless
Short Wave Magazine
Ham Radio Today

All are published monthly.

42. Internet news groups

For UK-specific news, try uk.radio.amateur - this FAQ is intended for that newsgroup.

The main Usenet groups for radio-related topics are listed below. The policy group in particular has a heavy US bias.

rec.radio.amateur.antenna Antenna theory/techniques
rec.radio.amateur.digital.misc Packet radio etc

rec.radio.amateur.equipment Production amateur radio hardware
rec.radio.amateur.homebrew Amateur radio construction
rec.radio.amateur.misc General news
rec.radio.amateur.policy Radio use & regulation policy
rec.radio.amateur.space Amateur radio transmissions through space
rec.radio.broadcasting Local area broadcast radio
rec.radio.info Informational postings
rec.radio.noncomm Non-commercial radio
rec.radio.shortwave Shortwave radio enthusiasts
rec.radio.swap Offers to trade and swap radio equipment

43. This and other FAQs

As stated elsewhere, this FAQ is not exhaustive. You may like to check out the FAQ's on amateur radio that are posted regularly in rec.radio.info and rec.radio.amateur.misc, obviously having regard for the non-UK slant to many topics. The main ham-radio FAQ (US in origin) and ham-digital-faq are available by anonymous FTP from:
rtfm.mit.edu:/pub/usenet/news.answers/radio
ftp.amdahl.com:/pub/radio/amateur

John Heaton G1YYH wrote in uk.radio.amateur
I have translated the FAQ into HTML form and placed it on our WWW server as:
http://www.mcc.ac.uk/OtherPages/uk-radio-amateur.html
and will try to keep it as much like the usenet FAQ as possible. I have inserted several http links into the FAQ to the UK callbook etc....

44. Is the UK callbook available on disc/CD-ROM ?

The information available on UK amateurs is much more restrictive than that on US amateurs, due to differing legislation and attitudes to public information. However, some of the information in the Callbook published by the RSGB is available. This does not appear to include callbook entries where postcode (zip-code) information only is given.

Ian Hampson G1DFT (ian@ainsdale.demon.co.uk) offered in uk.radio.amateur:
I've seen a couple of requests for the UK callbook on disc. Well, it's available on 2 HDD PC floppies from me if anyone wants it. Send me two blank disks and an SAE [sufficient IRC's outside the UK - Editor] and I'll do you a copy. Mark your envelope - 'callbook'. The callsign files come with an excellent PD search routine.

And John Heaton G1YYH, in rec.radio.amateur.misc said:
For the last few weeks or so a copy of the UK Radio Amateurs Callbook 1994 has been passed around the UK amateur community. What I have done is to put the callbook up on our HTTP server :
http://www.mcc.ac.uk/htbin/callbook
This database holds just over 49000 UK amateurs

This information may also be available on one of the US-originated CD-ROMs but I have no details.

45. Caveat.

A lot of information for this FAQ has been taken from the licencing booklet BR68 and the RA's information sheets. The licencing information was probably correct at the time I copied it, but do not take anything as being authoritative. The licence is constantly under review and this FAQ could easily be out of date. If in doubt, check!

46. Credits.

The following have contributed to this FAQ:

Adrian Godwin G7HWN
Mick Bowers G7NOR
Alan Cox GW4PTS
John Heaton G1YYH

1738. Re: Vertical Antenna Recommendations

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-07 18:34:12 UTC
From: rogjd@netcom.com
Message-ID: <rogjdCpG3L0.ACC@netcom.com>
Source record: 267290

I also run an R-5, with my TS850SAT barefoot @ 100 watts. THe antenna couldn't work better! I can work 'em if I can hear 'em. THe quality of construction is exceptionally good.

My SWR curves were precisely what Cushcraft advertises the first time up. I didn't have to re-tune the antenna one single time. All bands tuned very nicely.

tomrune@mac_inge (Tom Rune Lauknes) asks:

>I need the QSL-info for the following stations:

>A43YY (worked 23/12-93)

If anyone knows the A43YY route, please le me know too. I have
been getting QSL requests for QSOs with this station. I think
I know how this happened - A43YY had a QSO with 9V1YC on the above
date, and someone heard 9V1YC say "QSL via AA5BT" and attributed
that to A43YY. Anyway, I'm not the manager, and would like to know
who is, or at where the information that I am the manager appears so
that I can correct it.

1743. RC motor control

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-07 22:12:17 UTC
From: mlankhei@mercury.sfsu.edu
Message-ID: <2qh3o1$btf@news.csus.edu>
Source record: 267295

Hi all,

I am interested in using servo motors of the type used in model airplanes for general radio control applications. These motors rotate through an angle theta which is linearly proportional to a pulse modulated control voltage. There is a standard method of multiplexing several such data channels into a repeated pulse waveform to control several motors. The commercial systems operate in the 75MHz unlicensed RC band, but I'd like to be able to operate at other frequencies. If anybody knows anything about these servo motors, including cheap sources, please let me know. Also, if anyone knows of some good books on the subject, I'd appreciated the tip! I know there are hams out there who are into RC and operate their models in the 6 meter band, so if thats you, let me know how to get started !!! Thanks for any help.

Michael

1744. 46 Mhz & 49 Mhz advice wanted

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-07 22:57:00 UTC
From: ray.normandeau@factory.com
Message-ID: <258.2906.uupcb@factory.com>
Source record: 267247

I own a Bearcat/Uniden 210-XW scanner.

I would like to increase the reception in the
46 MHz
and
49
bands.

I was given a mag-mount with removable antenna coil but no antenna.

The coil part which I unscrewed from the mag-mount says K-40 and I think that
this was made for around 466.1500 MHz.

What can I add to the coil to get the reception in the
46 MHz and 49 bands that I want?

The coil has a set screw.

Thanks

1745. Info Needed: Packet with FT5100 and Baycom interface

Newsgroup: rec.radio.amateur.misc

1747. Re: Cruise ship radio operation

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-08 02:53:35 UTC
From: as041@FreeNet.Carleton.CA
Message-ID: <CpGqpB.6Lt@freenet.carleton.ca>
Source record: 267305

In a previous article, meh@cbsms1.cb.att.com (Martin E Hartwell x2091) says:

> I just returned from a cruise to the Caribbean, if you could only see my
smile. Anyway other than having a real good time I did stop at the radio
room of the ship and talked to the operator. I was standing in the
reception room outside the actual room that contained the equipment. The operator gave me
>a complete tour of his world, low band, vhf, satellite, fax, eg. Really a
>small room. On this ship there were two low band, around 8 MHZ inverted
>vee antannas. He said one was primary and the other secondary, or spare.

>The operator I talked to kind of implied that a lot of the ship to shore
was handled by satellite now but some went by way of low band. In fact he
was talking to the AT&T operator in New York as I came up to the window.
>
This might not be new info for some readers of this newsgroup but for
those who are interested, you CAN copy this ship-to-shore phone patch
traffic on the HF bands . . . not only from holiday cruise ships up to and
including the QEII and Carnival Lines but all kinds of other vessels at sea.

AT&T does indeed operate mega-coastal stations with high power (10kw+) and
awesome antenna farms (so they are easily heard). They are KMI in Point
Reyes, CA, WOM in Fort Lauderdale, and WOO in Manahawkin, NJ.

They are duplex operations (split xmit and rx freqs.) but most
decent receivers or transceivers with general coverage receive
will let you set two VFO frequencies. You just have to flip back and
forth between the two frequencies to hear both sides of the conversation. They
operate on a variety of specified marine channels in the HF bands in the
ranges of:

* NOTE: MINUS OFFSET VARIES BY BAND IN USE
4355 - 4430 KHz (ships transmit approx. 294.6 KHz lower than shore stn.)
8722 - 8811 KHz (..... 523.9 KHZ .....)
13100 - 13190 KHz (.....770.8 KHz .....)
17230 - 17330 KHz (.....772.9 KHz .....)
22620 - 22705 KHz (.....596.0 KHz .....)

There is lots of interesting phone traffic here, from vacationers calling
the family back home to ship crews messaging home base etc. Depending on
propagation and your QTH, some bands might be more favourable than others
but the 8 MHz band is a good place to start listening, especially if you
know 40 metres is in good shape.

Sure, it might be a little voyeuristic, but as long as the airwaves are
public domain and until they start scrambling the stuff up to birds,
listen away and have fun!

Cheers and 73...Rob

Speaking of licensing costs I just received a Ship Radio Station License renewal notice from the FCC: $35. 5 years ago it was free.

Jeff NH6IL (Ship License: WAD7684 - it's for my dinky little sailboat).

> planet through cycling.

Ahh, maybe thats your problem meeting at 6:45am. The only way anyone is
going to get me up and out of the house at that time is if the house
is on fire, and even then don't wake me up till my bedroom door is on
fire. <G>

Then again I live in San Jose, and getting to Aptos would take a good
hour, which means I'd have to leave the house by atleast by 5:30am.

Try hitting up the locals instead..Seeing the number of posts that you've
made I doubt you've had much success here. Time to hit 10 meter and get
the radio addicts. Or if your really desparate get a bunch of cbers
instead.

: One could suggest to another to "go to .52 Direct"
: Just adding to the confusion....

I'd just like to mention that .52 should be used as a "calling" frequency
and that once communication is established, the parties should move off
to one of the other (VERY MANY) other simplex frequencies. This is of
more concern in major metropolitan areas than it is in rural areas where
there is very little activity. Especially on simplex, you may no be
hearing one (or both sides) of a communication.

****

Just so you know, assault RIFLES(are a real thing. old timers VETS might remember the term BATTLE RIFLE) an assault WEAPON is a made up term intended to instegate fear. It is a BUZZ word made up by the media and your frends at the (we know whats best for you) HCI.

You sir, might be conserned, that the right (FREEDOM) we all here (USA) enjoy the right to speak about what ever we want, how ever we what, when ever, is not the next right go in this administration's trash heap...

You think "THAT WILL NEVER HAPPEN HERE" find, and take a good look at the much ballied Omnibus Crime Bill. It was provisions in it to arrest people that protest ,fed gov, action.. Don't just post back that I am full of sh!t, look it up.. The stuff that the Clinton croud are doing,and saying is scary. See what they are tring to do in Chicago, hint(warentless searches. Well that is more that enough off topic from me..

1753. QLF?

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-08 12:52:29 UTC
From: adams@chuck.dallas.sgi.com
Message-ID: <CpHIFI.ro@odin.corp.sgi.com>
Source record: 267311

The Q signal, QLF, usually means in the interrogatory form, "shall i send with my left foot?" or "are you sending with your left foot?". Probably meaning, in the latter case, the operator is having problems copying a poor fist. I don't see this on in chapter 37 in the Q signals of the 1992 Handbook. :-)

At many ham fests around the country, there is a contest called the QLF Contest. This usually means there is a large straight key made of wood sitting on the floor. The contestants usually remove one shoe, are given a piece of paper with plain text on it, and have to send the text as rapidly and accurately as they can. In many cases the contestant is standing on one foot while sending with the other. The key is connected to an audio oscillator and a team of judges may score the operator on style, grace, speed, accuracy, and whatever else they predetermine, then the contestants are awarded certificates or whatever at the end of the contest.

I am looking for the plans for such a key that people may have built or use in such contests. If you have such a thing, please email to me at adams@sgi.com or if you are inclined, fax to (214) 788-1376. I'm good in the callbook for the last 6 years if you want to use the US Post Office.

Any help greatly appreciated. I'm running such a contest at Hamcom in Dallas in June. Was going to do it last year, but the key didn't show up. Going to go ahead and build one, but the time in design, etc. doesn't appeal to me.

I'd be interested in "war stories" about such events that you've seen.

>
> It's nice to have, but I wonder why anyone would use the autopatch
> to make doctors or dentists appointments.
>
> ... Take my advice, I don't use it anyway.

Your advice SUCKS. What in the world is the autopatch for? WRONG.
Whatever YOU answered, its WRONG. Thats because whatever I DECIDE to
use it for I CAN use it for (within the law). Why should the law limit
it to, essentially, anything but running a business on ham radio, and
then an idiot like you come along and LIMIT IT FURTHER, to WHATEVER YOU
FEEL is 'inappropriate'????????
We dont need bully channel-cops like you around. Go beat your kids
into submission again and get the hell off this newsgroup. We already
have part 97 and its QUITE CLEAR on what it allows and doesnt allow,
and the intent of the latest change was CLEARLY to ALLOW amateurs to do
things like order pizzas and make dentist appointments on the patch.
The economics of patches in areas where each call costs money dictates
the use of the patch only when necessary... in areas where all local
calls are free, IT DOESNT. So, USE THE PATCH WHENEVER YOU FEEL LIKE IT,
HAMS.. Just stay within the LAW, not the holier-than-thou ideals of
no-brain OLD FARTS like THIS GUY!!!!

A while back, I heard of, read, thought there was, something, a mod for the Radio Shack SWR/Power Meter for 2M/440. It was a mod to hold the reading for a specific time or until released with a button mounted on the case.

Anyone remember where that was published? I have searched (skimmed) thru the QST and CQ issues I have, but haven't located it yet. I have given some of my mags away, and would like to locate that mod.

Thanks for any help.

Wait until the government decides that ham radio is harmful to one's health and they want to ban certain high power devices like amplifiers or 900 mhz equipment. Government is getting in and invading our lives too much. We need to keep them out of our private lives. While it may just be guns today, it will be our radios tomorrow, or something else. Government, and this administration in particular, is reducing our rights in the name of protecting us from harm. You have to draw the line somewhere.

Please excuse the ``me too'' post, but this one is at least slightly more
than just ``me too''....

I've been looking for a project idea for a new shareware program. I'd also
like to know what people would be interested in, but I'm going to add a
twist to it---I'm open to writing both dos (not windows---I don't have
windows, and I don't have the libs to compile stuff for it) stuff and UNIX
stuff. In other words, even if it exists in dos, but not in UNIX, let me
know if it's something you'd like to have (it doesn't have to be limited
to amateur radio, btw---I'm open to any ideas).

Later,

My most memorable version of this took place at one of the Laramie Wyoming get togethers in the mid 70's. This was an indoor event and the code contest was the best show of the day. The key consisted of a spring loaded toilet seat with contacts. By the way, it was won by a yl. Best cheeks in town! :)

SB DX @ ARL $ARLD026
ARLD026 DX news

ZCZC AE24
QST de W1AW
DX Bulletin 26 ARLD026
>From ARRL Headquarters
Newington CT May 5, 1994
To all radio amateurs

SB DX ARL ARLD026
ARLD026 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Frank, AH0W, Dave, VE3CPU, Joe, NJ1Q, Warren, NF1J, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column in QST. Thanks.

TONGA. Paul, KK6H, is supposed to be operating from here May 5 through June 4, though as of press time there have yet to be any spots on the local PacketCluster node. Listen for Paul's CW and RTTY from the shack of A35CT. Paul has requested the call sign A36H and plans to be in the WPX CW contest. QSL via KK6H.

JOHNSTON ISLAND. There is good news and bad news. First the bad news. The AH6IO/KH3 DXpedition by AH6IO and NH6UY has been cancelled. The good news is that satellite gear for the DXpedition will be used by KH3AF for about a month, so at least satellite DXers will have a chance at snagging this one.

YEMEN. Robert, N4GCK, of 3Y0PI fame, has received permission to operate from Yemen. He will be on as 7O0CW during July for a period of 4 or 5 days, mostly CW.

ZAIRE. Paul, F6EXV, has been active as 9Q5EXV. F5FHI is signing 9Q5FHI and has been worked on 7016 kHz at 0100z and 14193 at 1938. Both EXV and FHI are expected to move to other African locations soon.

ITU HQ GENEVA. Listen for 4U9ITU being operated from station 4U1ITU until May 11.

LIECHTENSTEIN. The 4U9ITU operators plan to operate HB0/DL8BDR/P with CW, SSB and TTY modes from May 12 to 15.

DESECHEO ISLAND QRT. A spokesman for the US Fish and Wildlife Service reports that landing permission requests are being denied, so amateur activity from this island is on hold. This action is a result of modern day pirates and Haitian rebels occupying the island.

SINT MAARTEN. From May 24 to 30, Chod, VP2ML/WB2CHO, and Frank, AH0W/OH2LVG, will be signing PJ7/WB2CHO and PJ7/OH2LVG respectively. They will team up to operate in the CQ WPX CW Contest as PJ8X. QSL PJ7/WB2CHO via K1RH. QSL PJ7/OH2LVG and PJ8X via KE7LZ.

SAINT PAUL ISLAND. Five northeast Wisconsin amateurs are planning a 4 or 5 day DXpedition to CY9 between June 10 and 19, weather permitting. Check 25 kHz up on 40 through 15 meters. For SSB, try 3795, 7155, 14195, 18130, 21295 and 28350 kHz. RTTY will be on 7085 and 14085 kHz. QSL via K0SN.

QSL UPDATE. Cards for V2/VE3BW should go direct to VE3BW only.

ON A SAD NOTE. Harvey McCoy, W2IYX, FSK RTTY pioneer and Editor of The Long Island DX Bulletin, recently became a Silent Key at age 83. RIP, Harvey.

THIS WEEKEND ON THE RADIO. The ARI International DX Contest, sponsored by the Associazione Radioamatori Italiani, is from 2000z May 7 to 2000z May 8 on CW, SSB and RTTY. Italian stations will exchange QSO serial number and two letter province indentifier. All others send signal report and serial number.

The Georgia QSO Party is from 1800z May 7 until 2000z May 8. For CW, check 3540, 7040, 14040, 21040, 28040 kHz and 50040 MHz. SSB activity will be around 3795, 7243, 14240, 21330, 28400 kHz and 50124 MHz. Georgia stations will exchange QSO serial number and their county. All others exchange serial number and state, province or DXCC country.

For more info on the ARI DX contest and Georgia QSO Party, check page 115 of April QST.

The Mobile Amateur Radio Awards Club, MARAC, is sponsor of the County Hunter's CW Contest, which runs from 0000z May 7 to 2400z May 8. Exchange RST and either county and state or province or DXCC country. Work stations once per band per county. Fixed station contacts are worth one point, mobile contacts are worth three points, and multipliers are the different US counties worked. Log submission deadline is June 8. Send to Norm Beavers, W3DYA, 3320 McMillan Drive, Tyler, TX 75701.

Ohio/Penn DX Bulletin No. 157

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 157
BID: $OPDX.157
May 9, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DL7VEE & DXNL, DF4RD, K4CEF & Southeastern Cluster Group, WB3JFS, WK3N, K3ZR, W5HVV, WI5A, KF7E and WD8NSD for the following DX information.

7O, YEMEN. It has been a little over a week since Robert, N4GCK (one of the operators of the 3Y0PI), announced the good news that he has received permission to operate as 7O0CW and he could be active during July. Now for the bad news! The newspapers report, "Yemen has edged toward civil war in a fight over the two regions since conservative North Yemen and socialist South Yemen united on May 22, 1990". Fierce fighting is reported between the northern and southern troops on the border region between Yemen's two feuding regions.

A5, BHUTAN. Roderick, W5HVV, spoke with Jim Smith, VK9NS, on the air May 4th and Jim stated that he had spoken with the Ministry of Communication of Bhutan. Jim mentioned that he was anticipating a trip to Bhutan to operate. All the equipment and a beam are already there. Jim is only awaiting the final word from the Ministry of Communication and he would be off and running. There was an indication that Jim would also operate from Bangladesh (S2) and Nepal (9N), probably on his way to Bhutan.

A6, UNITED ARAB EMIRATES. It has been reported that A61AN is a SLIM operating in Dubai. If you ask this station about QSL info, he will tell you, "FORGET IT! I did not QSL at all!". At Dayton, Don (WB2DND/A61AD) has also stated this station is operating illegeally and was claiming to be Nasir the "old" A61AF operator. Don also mentioned he will be return to U.A.E. in October.

BY, CHINA. George, BY/KA3NRG, is now in Beijing on business during the month of May. George's free time is limited, but his plans are to operate the ususal SSB DX frequencies. He is a relatively new DXer, but he is savvy and says he will not hesitate to QSY or pull the plug should the

gang become unruly. QSL via K3WS.

KH0, MARIANA ISLANDS. From May 26-30th, JA6VZB and JF6BCC will be active as AH0T and KH2GR/KH0, respectively. Operations will be on 160-10 meters, CW/SSB and RTTY; and they will participate in the WPX contest.

VR6, PITCAIRN ISLAND. According to Dave, VR6ME, as of April, VR stations are allowed to use 12 and 17 meters. He states operations prior to this were not quite legit. Also, he stated the new call sign for the Pitcairn Amateur Radio Club is now VR6PAC.

DX-TIDBITS..... Jim, 5X1B, will be (or is) QRT in May, but heads for Cameroon (TJ) after a home leave..... Because of budget cutbacks in Moscow, the Vostok Antarctic outpost (4K1C) has been recently abandoned. The Vostok base holds the record for the coldest spot on earth. 129 below zero, achieved on July 21, 1983..... Mike, ZD8M (G3UOF), has gone QRT from Ascention Island as March 16, 1994. A report of using his (G3UOF) home address, instead of the Ascention Island address, results in a quicker turn around of his QSL cards.....

NOT ACCEPTED BY THE DXCC DESK. Bill, K5FUV, at the Dayton HamVention DX Forum, entertained a few question about a few operations and has stated the following:
The I2RAO/HK0 (Malpelo) cards were not being accepted because the operator apparently just showed up at the island and asked the persons that were there for permission to land. I2RAO did not receive the permission from the right govenrment agency and that it was unlikely that permission would ever be granted. The cards would probably never be accepted.

The FR/DJ6SI/G (Glorioso) cards would not be accepted because Baldur did not have the proper permission to be there.

DAYTON HAMVENTION SUMMARY (From a DXer's point a view! by KB8NW).
Another Dayton HamVention has come and gone, and there are good and bad things to remember about this convention (naturally the good out weigh the bad). The only major complaint is that "Mother-Nature" was not too kind to the conventioneers. I do beleive that this is four years in a row of bad and rainy weather. Many of us wait all year for this special event to happen. Hey! Does anyone have "Mother-Nature's" InterNet address? (Doesn't InterNet go anywhere?) Maybe we can send her a message and ask her to
"P L E A S E"
"Give.....Us.....A.....Break.....Next.....Year!".
At least she can not disrupt the DX Forum, DX Dinner Banquet and the visiting of the hospitally suites. I look forward every year to meet with old and new friends at these special activities. For me, this is the highlight of the HamVention. If you are a DXer and have never attended at least one of these functions, you are missing out on the whole purpose of this "CONVENTION".
Those that attended the Southwest Ohio DX Association's Dinner Banquet were treated to a great slide presentation on the 3Y0PI DXpedition by

Ralph Fedor, K0IR. After the banquet, members of the 3Y0PI DXpedition were on hand in one of the hospitality suites, to meet and greet all; plus to autograph an excellent book on the 3Y0PI DXpedition written by Bob Schmieder, KK6EK.
At the DX Forum there were presentations by Bill Kennamer, K5FUV (DXCC Administrator) and Bob Beatty, W4VQ (DXAC Chairman). Bill give an update on status of the DXCC Desk in the processings of the applications, changes and the growth of DXing. Bob's talk dealt with the DX Advisory Committee past and present activities.
Other presentations included: Richard Grantham's (VE1AI) DXpedition to C51A, Igor Zdorov's (KU0J) DXpedition 1B/KU0J and Holger Hannenmann's (DL7VTM) 1992 Pacific DXpedition. It was great to see and meet again, NODXA member Holger and his girlfriend Birgit (DG9WYL). Holger introduced me to his QSL Manager, Fritz (DL7VRO), and his daughter Silke. Plans were worked out later to have both Fritz and Silke attended the NODXA meeting the Monday after the Hamvention.
But the highlight of the DX Forum was another presentation on the 3Y0PI DXpedition by Terry Dubson, W6MKB. This presentation was totally different from the one that Ralph, K0IR, presented. Different slides and a rough cut video were shown. After the presentation, the 3Y team were applauded and received a standing ovation.
In summary, Dayton was not a total loss. As long as there can be an international gathering of friends and a show of goodwill, I will keep returning to the Dayton HamVention.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

1765. HamRadio to Internet (HELP!)

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-08 20:29:41 UTC
From: ua099@freenet.Victoria.BC.CA
Message-ID: <1994May8.202941.19238@freenet.victoria.bc.ca>
Source record: 267176

Hi, all. I have heard that it is possible to access internet
in real time via some form of packet (?) or other digital
radio communications. I would be extremely grateful if
anyone who already does this would be able to answer my
questions about it. (If you know someone on internet who
could answer my questions but would not be likely to see
this I would appreciate it if you passed this on to them.)
-Ben Coburn

Email me at either of my addresses:
btcoburn@ctdnet.acns.nwu.edu
ua099@freenet.victoria.bc.ca

P.S. This is the main reason I would spend the time
to get a ham radio license.

1766. Islands on the air

1767. Archived solar info on the net

Newsgroup: rec.radio.amateur.misc
Date: 1994-05-08 22:22:48 UTC
From: wkinning@nyx10.cs.du.edu
Message-ID: <1994May8.222248.10378@mnemosyne.cs.du.edu>
Source record: 267323

Recently I was going through some old log book entries and I wanted to compare them with the solar conditions at the time. The book I have on solar conditions only listed entries to the late seventies. I figured that the data must be archived on the net somewhere and I found it at the National Geophysical Data Center Gopher run by NOAA. It has sunspot and solar flux records going back a few years.
The gopher address is:

Host=gopher.ngdc.noaa.gov
Path=1/NGDC Public Data/Solar Terrestrial Physics/SOLAR_DATA

Mark, FWIW, I would have done the exact same thing. And to agree with
someone else that posted, I believe the Communications Act covers that
scenario. Legal or not, You did good. BTW, Congrads on the license.

Vince.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 8/2330Z MAY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 8 MAY AND FORECAST UP TO 11 MAY

IPS Warning 12 was issued on 25 APR and is still current.

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 074/011

1B. SOLAR FORECAST
09 May 10 May 11 May
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 075/013

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: active to minor storm

Estimated Indices : A K Observed A Index 7 May
Learmonth 30 3354 5453
Fredericksburg 28 30
Planetary 35 40

Observed Kp for 7 May: 6665 4343

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 May 32 Active to minor storm.
10 May 28 Active.
11 May 25 Unsettled to active.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
08 May normal normal fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 May fair poor poor
10 May fair poor poor
11 May fair poor poor
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were about 15% below predicted monthly values

Observed T index for 08 May: 10

Predicted Monthly T Index for May is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
09 May 5 10 to 20% below predicted monthly values.
10 May 15 About 10% below predicted monthly values.
11 May 20 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

Hi Gang,

I picked up one of these HT's at a pawn shop the other day. From all outward appearances, it looks like a Yaesu FT-470 (case, battery pack, kybd, etc), but it is only 70cm not dual band. At least I have not found the trick to get it to work 2m/70cm. What I need to know is:
1 - Is it made by Yaesu?
2 - Is it functionally equivalent to the FT-470?
3 - If not, does anybody have a manual that I can copy?
4 - Was it designed as a business band HT?

Any help, anybody can give would be greatly appreciated.

tnx/73 de KB0LRB

Cross-posted to: rec.audio.cars,rec.radio.cb,rec.radio.amateur.misc

Hi,

I have a minor problem that I was wondering if you could help me out?
I have an '84 Honda Accord, in which I recently installed a CB radio
which draws its power from the cigarette lighter circuit. The problem
is that I also use that same circuit for some LEDs that I've installed
in the car to make it look like I have a car alarm.

Unfortunately this LEDs are the blinking kind, and when the LED blinks
it causes a "tick" noise on the CB. Installing a switch on the LED is
out of the question because then I'd forget to turn it on. So one friend
of mine suggested that I add a capacitor inline with the LED circuit,
and that should solve the problem.

But that doesn't seem to make sense to me, because its the CB that needs
the steady power supply not the LED....shouldn't I add the capacitor
in series with the CB instead?? Or do I need some kind of low pass
filter? Any clues?

Thanks for your help.

Dayton Hamvention '94 Termed "Best Ever" For AMSAT-NA

The 1994 Dayton Hamvention is now history, and AMSAT-North America's (AMSAT-NA) participation at this year's gathering was nothing short of a record breaker from a number of standpoints. "While all the numbers aren't in yet, we now believe this will be our best year ever for AMSAT at Dayton," said Bill Tynan (W3XO) AMSAT-NA President. He went on to express his sincere thanks for the very long hours, lost sleep and hard work put forth by the many Dayton AMSAT booth volunteers, forum speakers and contributors. In addition, Bill expressed his particular pleasure that the success at this year's Hamvention also coincided with AMSAT's 25th anniversary celebration. Without question, the highlight of this year's Hamvention activity was a forum honoring the 10th anniversary of SAREX activity aboard the NASA Space Shuttle. Roy Neal (K6DUE) moderated the forum and was joined on the podium by NASA Shuttle Astronauts Tony England (W0ORE) and Steve Nagel (N5RAW) along with several other members of the SAREX working group. Also joining the group by live telephone patch were Astronauts Jay Apt (N5QWL) at the Johnson Space Flight Center in Houston and Astronaut Ron Parise (WA4SIR) at the Goddard Space Flight Center in Greenbelt, Maryland. In addition, a surprisingly clear telephone patch was successfully completed to Astronaut Ken Cameron (KB5AWP) in Star City, Russia. Ken is now training there for an upcoming joint NASA/Soyuz mission to the Russian Space Station MIR. All the astronauts shared their on-orbit experiences with ham radio and answered several questions from the gathering of Hamvention attendees. A number of students who have contacted the Shuttle via Amateur Radio in the past were also present at the forum and gave their own first hand impressions of their activities. Local TV coverage from all three Dayton commercial television stations highlighted the NASA astronauts speaking to the standing-room-only crowd of nearly 500 present at the event.

Other AMSAT activities at this year's Hamvention included a beginner's forum hosted by Keith Baker (KB1SF) along with a new PACSAT forum hosted by John Hansen (WA0PTV). Ed Krome (KA9LNV) highlighted the simplicity of Mode-S in a forum dedicated exclusively to that activity. Dick Jansson (WD4FAB) AMSAT-NA's VP for Engineering, was also on the program and brought Hamvention attendees up to speed on the latest developments with Phase 3-D.

In addition, Ron Broadbent (G3AAJ) the Honorable Secretary of AMSAT-UK, gave his organization's perspective on the Phase 3-D project. Ron also announced to the group that a $100,000 contribution from AMSAT-UK was recently made to the Phase 3-D project specifically for the purchase of flight batteries for the new spacecraft.

Unfortunately, two days of steady rain on Friday and Saturday followed by extremely cold weather on Sunday kept most of the crowd indoors. Despite the bad weather, however, well over 200 people stopped by the booth to initially join or renew their memberships in AMSAT-NA.

New items at this year's AMSAT booth included two new software programs and a number of other items. Joe Holman (KA7LDN) unveiled AMSAT-NA's first ever Microsoft Windows-based satellite tracking program called WINSAT. In addition, a new Microsoft Windows-based PB/PG packet software package called WISP written by Chris Jackson (ZL2TPO), was premiered at the booth. Needless to say, both of these new AMSAT software packages were in great demand by Hamvention attendees.

Other new items included an AMSAT 25th Anniversary patch and decal. Also, several new books were premiered at the booth, including the fourth and latest edition of "How to Use the Amatuer Radio Satellites" by Keith Baker (KB1SF) and a newly revised "AMSAT-NA Digital Satellite Guide" edited by Gould Smith (WA4SXM).

[The AMSAT News Service (ANS) would like to thank KB1SF, W3XO, and KA3HDO for this bulletin item.]

G7MBF Recognized For His Research With POSAT-OSCAR-28's GPS Experiment

Congratulations are in order for University of Surrey (UoSAT) student Martin Unwin (G7MBF) who won the "Best Student Paper Prize" for his paper titled "Differential GPS Implementation on Microsatellites" presented at the recent Differential Satellite Navigation Systems Conference held in London. The award was sponsored by INMARSAT and the Royal Institute of Navigation and consists of $1,000 to be used for continuing research in GPS at UoSAT; it was presented to Martin by Olaf Lundburg, the Director General of INMARSAT.

The PoSAT-OSCAR-28 GPS experiment has been highly successful automatically generating keplerian elements on-board based on GPS location measurements. Efforts are under way to use ground-based radars or other "cross-checks" to see just how accurately the GPS receiver is measuring the satellite's position in orbit.

[The AMSAT News Service (ANS) would like to thank Jeff Ward (K8KA/G0SUL) for this bulletin item.]

AO-13 OPS NET SCHEDULE

HR AMSAT NEWS SERVICE BULLETIN 127.03 FROM AMSAT HQ
SILVER SPRING, MD MAY 7, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-127.03

Current AMSAT Operations Net Schedule For AO-13

AMSAT Operations Nets are planned for the following times. Mode-B Nets are conducted on AO-13 on a downlink frequency of 145.950 MHz. If, at the start of the OPS Net, the frequency of 145.950 MHz is being used for a QSO, OPS Net enthusiasts are asked to move to the alternate frequency of 145.955 MHz.

Date UTC Mode Phs NCS Alt NCS
14-May-94 1700 B 167 WA5ZIB W5IU
21-May-94 2130 B 185 VE2LVC W9ODI

Any stations with information on current events would be most welcomed. Also, those interested in discussing technical issues or who have questions about any particular aspect of OSCAR statellite operations, are encouraged to join the OPS Nets. If neither of the Net Control Stations show up, any participant is invited to act as the NCS.

"Slow Scanners" are invited to join the SSTV sessions on AO-13. The frequency is 145.955 MHz. The net meets at 45 minutes before Mode S, and on Mode B following Mode S on Saturdays and Sundays. Join those sessions or convey your wishes for other SSTV skeds to wb6llo@amsat.org, and he will coordinate your efforts.

Weekly OSCAR Status Reports: 07-MAY-94

AO-13: Current Transponder Operating Schedule:
M QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 Apr 07-Jul 11
Mode-B : MA 0 to MA 170 |
Mode-BS : MA 170 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 250 | Blon/Blat 230/-5
Mode-B : MA 250 to MA 256 |

Omnis : MA 250 to MA 120 | Move to attitude 180/0, Jul 11
[G3RUH/DB2OS/VK5AGR]

FO-20: The FO-20 ground command station has confirmed that the bird has been malfunctioning. The operational schedule announced previously is currently suspended and the analog mode will be continued indefinitely. Further operation schedule will be announced on and after 11-May-94. [Kazu Sakamoto (JJ1WTK) qga02014@niftyserve.or.jp]

KO-25: KO-25 B has apparently been moved to the alternate receive frequency because of trouble with the other receiver. So uplink now is 145.870 MHz. The controllers note that the receiver may be turned off intermittently due to receiver testing. [WH6I]

AO-16: Working well. [WH6I]

LO-19: Operating normally. [WH6I]

KO-23: Operating Normally. [WH6I]

UO-11: WB1HBU talked with Doug Loughmiller (G0SYX) of the University of Surrey (UoSAT) while they both were at the Dayton Hamvention and G0SYX indicated that UO-11's S band beacon is now on continuously. The frequency is 2401.5 MHz. [WB1HBU & G0SYX]

RS-10/11: WA6ARA reports that RS-10 is operating beautifully! The passes at his QTH are coming around again in the late evening. WA6ARA is presently using QRP power, about 5W, using CW into a J pole with excellent results. WA6ARA says that "this bird continues to put out an excellent signal." [WA6ARA]

RS-12/13: HA5WH friend, Sanyi (XU7VK), is working from Cambodia during the daytime on RS-12. His biggest problem is finding stations to make QSOs with. HA5WH requests all stations in that area who use RS-12 to listen for XU7VK on RS-12. [HA5WH]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ W0LJF.#NECO.CO.USA.NOAM. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

/EX

1777. Re: How to make a diplexer?

From: janc@icebox.iceonline.com
Message-ID: <CpIprM.HGH@iceonline.com>
Source record: 267331

>That's not a diplexer schematic in the previous post. It's essentially a
>VHF / UHF splitter, which is really just hi pass and lo pass filters in
>the same box. Diplexers use exotic things like cavities and magic T's.
>What? You've never heard of a magic T?
>

I've always been told that a duplexer utilized cavities and was used in applications such as repeaters. Diplexers it was then understood were the little black boxes you'd attach to your dual band mobile radio to run two bands/2 radios on a dual band antenna OR 2 antennas from a single dual band radio with only one antenna output.

Does anyone know who/what uses the 30Mhz to 40Mhz frequency range?
I have a European 35Mhz transmitter for my RC aircraft.
I would like to know if it's safe to use it in the States.
Does anything conflict? Military possibly?

Thanks,

Stuart

I'm working on the companion volume: "What the OF's are saying."

This would include such phrases as "Fine Business Old Man", "Have to go and drink an 807 hi hi", "I have to sign - there's a call on the landline" etc.

Can anyone add to this list, and preferably translate them?

[Don't blame me for the upper case later on...]

W.I.A. NSW DIVISION
NEWS

ISSUED 8 MAY, 1994

MESSAGE TO MEMBERS FROM MICHAEL CORBIN VK2PFQ

My comments to you this week will be, of necessity, brief.

Last Friday evening, a meeting was held [at Amateur Radio House in Parramatta] involving members of the old Ad Hoc - now, "Concerned Amateurs" - Committee, some of the candidates who stood at the recent Council election, a few Councillors and myself.

The meeting was NOT a Council meeting. It was just an informal meeting at which various aspects of the Ad Hoc (now Concerned Amateurs) group's legal advice on their dispute over the election were discussed and the issues that those in attendance saw arising from them.

The Division's legal advice was not available for the meeting and thus could not be discussed.

When the Division's final legal advice becomes available, I'll have more news to give you then.

In the meantime, Divisional business will proceed as normal. Next Thursday's Council meeting will allocate responsibilities to various Councillors.

Those of you who have repeater applications will be pleased to know that the sorting out of this matter began as of last Friday.

We have a new Chairman for NTAC (NSW Technical Advisory Committee). It is Barry Sullivan VK2BZ. Councillor Ian Rosser VK2XB will act as NTAC Liaison.
